Kent D. Lee,2008-12-15 Programming Languages An Active Learning Approach introduces students to three programming paradigms object oriented imperative languages using C and Ruby functional languages using Standard ML and logic programming using Prolog This interactive textbook is intended to be used in and outside of class Each chapter follows a pattern of presenting a topic followed by a practice exercise or exercises that encourage students to try what they have just read This textbook is best suited for students with a 2 3 course introduction to imperative programming Key Features 1 Accessible structure guides the student through various programming languages 2 Seamlessly integrated practice exercises 3 Classroom tested 4 Online support materials Advance praise The Programming Languages book market is overflowing with books but none like this In many ways it is precisely the book I have been searching for to use in my own programming languages course One of the main challenges I perpetually face is how to teach students to program in functional and logical languages but also how to teach them about compilers This book melds the two approaches very well David Musicant Carleton College *Central European Functional Programming School* Viktória Zsók,Zoltán Porkoláb,Zoltán

Horváth,2019-08-13 This volume presents the revised lecture notes of selected talks given at the 6th Central European Functional Programming School CFP 2015 held in July 2015 in Budapest Hungary The 10 revised full papers presented were carefully reviewed and selected The lectures covered a wide range of functional programming and C programming subjects Practical Aspects of Declarative Languages Veronica Dahl,Philip Wadler,2003-07-01 This book constitutes the refereed proceedings of the 5th International Symposium on Practical Aspects of Declarative Languages PADL 2003 held in New Orleans LA USA in January 2003 The 23 revised full papers presented together with 3 invited contributions were carefully reviewed and selected from 57 submissions All current aspects of declarative programming are addressed

Programming Languages and Systems G. Ramalingam,2008-11-14 This volume contains the proceedings of the 6th Asian Symposium on Programming Languages and Systems APLAS 2008 which took place in Bangalore December 9 December 11 2008 The symposium was sponsored by the Asian Association for Foundation of Software AAFS and the Indian Institute of Science It was held at the Indian Institute of Science as part of the institute s centenary celebrations and was co located with

FSTTCS Foundations of Software Technology and Theoretical Computer Science 2008 organized by the Indian Association for Research in Computer Science IARCS In response to the call for papers 41 full submissions were received Each submission was reviewed by at least four Program Committee members with the help of external reviewers The Program Committee meeting was conducted electronically over a 2 week period After careful discussion the Program Committee selected 20 papers I would like to sincerely thank all the members of the APLAS 2008 Program Committee for their excellent job and all the external reviewers for their invaluable contribution The submission and review process was managed using the EasyChair system In addition to the 20 contributed papers the symposium also featured three invited talks by Dino Distefano Queen Mary University of London UK Radha Jagadeesan DePaul University USA and Simon Peyton Jones Microsoft Research Cambridge UK Many people have helped to promote APLAS as a high quality forum in Asia to serve programming language researchers worldwide Following a series of well attended workshops that were held in Singapore 2000 Daejeon 2001 and Shanghai 2002 the first formal symposiums were held in Beijing 2003 Taipei 2004 Tsukuba 2005 Sydney 2006 and Singapore 2007 *Central European Functional Programming School* Zoltán Horváth, Rinus Plasmeijer, Viktoria Zsóka, 2011-01-04 The peer reviewed papers featured in this volume were chosen from the revised notes of lectures given at the third CEFPS School in 2009 They cover a number of topics such as design patterns semantics types and advanced programming in various FP languages **Lectures on Concurrency and Petri Nets** Jörg Desel, Wolfgang Reisig, Grzegorz Rozenberg, 2004-06-14 This tutorial volume originates from the 4th Advanced Course on Petri Nets ACPN 2003 held in Eichstätt Germany in September 2003 In addition to lectures given at ACPN 2003 additional chapters have been commissioned to give a well balanced presentation of the state of the art in the area This book will be useful as both a reference for those working in the area as well as a study book for the reader who is interested in an up to date overview of research and development in concurrent and distributed systems of course readers specifically interested in theoretical or applicational aspects of Petri nets will appreciate the book as well Programming Languages Norman Ramsey, 2022-10-27 Computer scientists often need to learn new programming languages quickly The best way to prepare for this is to understand the foundational principles that underlie even the most complicated industrial languages This text for an undergraduate programming languages course distills great languages and their design principles down to easy to learn bridge languages implemented by interpreters whose key parts are explained in the text The book goes deep into the roots of both functional and object oriented programming and it shows how types and modules including generics polymorphism contribute to effective programming The book is not just about programming languages it is also about programming Through concepts examples and more than 300 practice exercises that exploit the interpreter students learn not only what programming language features are but also how to do things with them Substantial implementation projects include Milner's type inference both copying and mark and sweep garbage collection and arithmetic on arbitrary precision integers **ML**

for the Working Programmer Larry C. Paulson,1996-06-28 The new edition of this successful and established textbook retains its two original intentions of explaining how to program in the ML language and teaching the fundamentals of functional programming The major change is the early and prominent coverage of modules which are extensively used throughout In addition the first chapter has been totally rewritten to make the book more accessible to those without experience of programming languages The main features of new Standard Library for the revised version of ML are described and many new examples are given while references have also been updated Dr Paulson has extensive practical experience of ML and has stressed its use as a tool for software engineering the book contains many useful pieces of code which are freely available via the Internet from the author He shows how to use lists trees higher order functions and infinite data structures Many illustrative and practical examples are included Efficient functional implementations of arrays queues priority queues etc are described Larger examples include a general top down parser a lambda calculus reducer and a theorem prover The combination of careful explanation and practical advice will ensure that this textbook continues to be the preferred text for many courses on ML *ML for the Working Programmer* Lawrence C.
