Tienken,2016-11-14 Defying Standardization pierces the veil of misinformation surrounding the push to standardize the curriculum expectations for 56 million public school children It provides a high energy passionate and well researched argument of what curriculum should and can be to facilitate the development of unstandardized skills and dispositions necessary for a globally connected society Defying Standardization dismantles the myths and lies surrounding international test rankings and demonstrates that there is no relationship to economic indicators or skills that drives the innovation economy The book provides practical examples for how educators students and parents can defy standardization with locally developed evidence informed and globally literate practices to facilitate the development of customized curricula This book is for those who yearn for a vibrant innovative and creative school system in which all students are provided opportunities to pursue their passions and interests in ways that will prepare them to be well rounded individuals and democratic citizens in a global community Standardization and Expectations Tobias Langenberg,2005-12-19 Over the last decades technological progress has brought about a multitude of standardization problems For instance compatibility standards ensure the interoperability of goods which is of decisive importance when users face positive externalities in consumption Consumers expectations are key to the problem of whether a new technology will prevail as de facto standard or not Early adopters must be confident that the network good will be successful Thus it may be worthwhile for firms to influence consumers expectations Consisting of three models on various aspects of standardization and expectations this book aims at deepening our understanding of how standards and expectations interact The models are applied to problems such as Inter Technology vs Intra Technology Competition and Standardization of Nascent Technologies *Re-Engineering Software* Roy Rada,2024-02-02 Creating software of any kind is an enormously expensive proposition whether for internal use or commercial application The range of activities involved in engineering and creating software are mind boggling in complexity Yet every time new software is developed most programmers start from scratch without considering what might be re used or salvaged from existing programs Re Engineering Software addresses the principles approaches support systems underlying methodologies and real case examples for re using and thus building on previously existing software
