*Organ Donation and Transplantation after Cardiac Death in China* Xiaoshun He,Jiefu Huang,2022-02-17 This book presents a view of the current environment of organ donation and transplantation after cardiac death in China including legal and ethical aspects of cardiac death assessment and management of potential organ donor quality evaluation and machine perfusion of organ as well as immunology imaging and pathology related to transplantation from cardiac death donors Since 2015 voluntary donation has been announced as the only legitimate venue for organ transplant in China As cardiac death is adopted in China the donation mode is different from those in other countries where brain death is adopted It offers transplant surgeons and physicians valuable information on optimal practice proposal for organ donation after cardiac death in China      Opportunities for Organ Donor Intervention Research National Academies of Sciences, Engineering, and

Medicine, Health and Medicine Division, Board on Health Sciences Policy, Committee on Issues in Organ Donor Intervention Research, 2018-01-21 The organ donation and transplantation system strives to honor the gift of donated organs by fully using those organs to save and improve the quality of the lives of their recipients. However, there are not enough donated organs to meet the demand, and some donated organs may not be recovered. Some recovered organs may not be transplanted, and some transplanted organs may not function adequately. Organ donor intervention research can test and assess interventions, e.g., medications, devices, and donor management protocols to maintain or improve organ quality prior to, during, and following transplantation. The intervention is administered either while the organ is still in the deceased donor or after it is recovered from the donor but before it is transplanted into a recipient. Organ donor intervention research presents new challenges to the organ donation and transplantation community because of ethical questions about who should be considered a human subject in a research study whose permission and oversight are needed and how to ensure that such research does not threaten the equitable distribution of a scarce and valuable resource. Opportunities for Organ Donor Intervention Research focuses on the ethical, legal, regulatory, policy, and organizational issues relevant to the conduct of research in the United States involving deceased organ donors. This report provides recommendations for how to conduct organ donor intervention research in a manner that maintains high ethical standards that ensures dignity and respect for deceased organ donors and their families; that provides transparency and information for transplant candidates who might receive a research organ; and that supports and sustains the public's trust in the process of organ donation and transplantation.
