

CHARACTER VARIETY OF REPRESENTATIONS OF A FINITELY GENERATED GROUP IN SL_2

KYOJI SAITO

(Received January 10, 1996)

This is a partial exposition of [S4, S5, S6], which study the space of representations of a (finitely generated) group Γ in SL_2 and GL_2 in an attempt of its application in geometry: Teichmüller spaces, knot theory, hyperbolic manifolds, moduli spaces, $\dots$, etc. (see for instance, [A], [Be], [Br], [C-C-G-L-S], [C-S], [F-K], [G], [H], [H-L-M], [H-K], [J-W], [K], [Kj], [Ko], [Kr], [Ma], [Mu], [N-Z], [O], [S], [S-S], [T], [W], [We], [Wo], [Y], $\dots$, etc). For simplicity, we omit the case for GL_2 in the present exposition. Let us explain the main result of the present paper.

Let Γ be a group. The purpose of the present paper is to introduce the character variety $\text{Ch}(\Gamma, SL_2)$ in order to parameterize conjugacy classes of representations of Γ in SL_2 in a functorial way. At first, the character variety is introduced as a scheme over $\mathbb{Z}$, independent of the coefficient ring of representations in question. Then, the scalar field is specialized to $\mathbb{R}$ to obtain results on representations in $SL_2(\mathbb{R})$ and in $SU(2)$ with respect to the classical topology. Let us explain this briefly.

Let $\text{Hom}(\Gamma, SL_n)$ be the functor $R \in \{\text{commutative rings with } 1\} \mapsto \text{Hom}(\Gamma, SL_n(R)) \in \{\text{sets}\}$. The functor is representable (see §1.3 Lemma) and so, for an abuse of notation, we denote by the same $\text{Hom}(\Gamma, SL_n)$ the scheme over $\mathbb{Z}$ representing the functor. The group scheme PGL_n acts on $\text{Hom}(\Gamma, SL_n)$. Whether the universal categorical quotient $\text{Hom}(\Gamma, SL_n) // \text{PGL}_n$ (Mumford [Mu1]) defined over $\mathbb{Z}$ exists or not seems to be a hard and unsolved question. Instead of asking directly for the quotient space, we introduce *i)* the *character variety* $\text{Ch}(\Gamma, SL_2)$ together with its *discriminant subvariety* D_Γ as schemes over $\mathbb{Z}$ abstractly, and *ii)* the PGL_2 -invariant morphism $\pi_\Gamma: \text{Hom}(\Gamma, SL_2) \rightarrow \text{Ch}(\Gamma, SL_2)$, for which we prove that *i)* the restriction of π_Γ on the complement of $\pi_\Gamma^{-1}(D_\Gamma)$ is a principal PGL_2 -bundle with respect to the *étal* topology, and *ii)* the inverse image $\pi_\Gamma^{-1}(D_\Gamma)$ is a subfunctor of $\text{Hom}(\Gamma, SL_2)$ consisting of abelian or reducible representations. This implies that the complement $\text{Hom}^*(\Gamma, SL_2) := \text{Hom}(\Gamma, SL_2) \setminus \pi_\Gamma^{-1}(D_\Gamma)$ consists of absolutely irreducible representations, and that $\text{Hom}^*(\Gamma, SL_2)$ has the universal categorical quotient space $\text{Ch}^*(\Gamma, SL_2) := \text{Ch}(\Gamma, SL_2) \setminus D_\Gamma$ defined over $\mathbb{Z}$. Then the result is specialized

Varieties of Representations of Finitely Generated Groups Alexander Lubotzky, Andy R. Magid, Andy Roy Magid, 1985 The n dimensional representations over an algebraically closed characteristic zero field k of a finitely generated group are parameterized by an affine algebraic variety over k The tangent spaces of this variety are subspaces of spaces of one cocycles and thus the geometry of the variety is locally related to the cohomology of the group The cohomology is also related to the pronipotent radical of the proalgebraic hull of the group This paper exploits these two relations to compute dimensions of representation varieties especially for nilpotent groups and their generalizations It also presents the foundations of the theory of representation varieties in an expository self contained manner

Representation Theory of Finite Groups Peter Schneider, 2012-11-27 Representation theory studies maps from groups into
 the general linear group of a finite dimensional vector space For finite groups the theory comes in two distinct flavours In the
 semisimple case for example over the field of complex numbers one can use character theory to completely understand the
 representations This by far is not sufficient when the characteristic of the field divides the order of the group Modular
 Representation Theory of finite Groups comprises this second situation Many additional tools are needed for this case To
 mention some there is the systematic use of Grothendieck groups leading to the Cartan matrix and the decomposition matrix
 of the group as well as Green's direct analysis of indecomposable representations There is also the strategy of writing the
 category of all representations as the direct product of certain subcategories the so called blocks of the group Brauer's work
 then establishes correspondences between the blocks of the original group and blocks of certain subgroups the philosophy
 being that one is thereby reduced to a simpler situation In particular one can measure how nonsemisimple a category a block
 is by the size and structure of its so called defect group All these concepts are made explicit for the example of the special
 linear group of two by two matrices over a finite prime field Although the presentation is strongly biased towards the module
 theoretic point of view an attempt is made to strike a certain balance by also showing the reader the group theoretic
 approach In particular in the case of defect groups a detailed proof of the equivalence of the two approaches is given This
 book aims to familiarize students at the masters level with the basic results tools and techniques of a beautiful and important
 algebraic theory Some basic algebra together with the semisimple case are assumed to be known although all facts to be
 used are restated without proofs in the text Otherwise the book is entirely self contained **The Arcata Conference on**
Representations of Finite Groups, Part 1 Paul Fong, 1987 The papers in these proceedings of the 1986 Arcata Summer
 Institute bear witness to the extraordinarily vital and intense research in the representation theory of finite groups The
 confluence of diverse mathematical disciplines has brought forth work of great scope and depth Particularly striking is the
 influence of algebraic geometry and cohomology theory in the modular representation theory and the character theory of
 reductive groups over finite fields and in the general modular representation theory of finite groups The continuing
 developments in block theory and the general character theory of finite groups is noteworthy The expository and research

aspects of the Summer Institute are well represented by these papers

Computational Invariant Theory Harm Derksen, Gregor Kemper, 2015-12-23 This book is about the computational aspects of invariant theory Of central interest is the question how the invariant ring of a given group action can be calculated Algorithms for this purpose form the main pillars around which the book is built There are two introductory chapters one on Gröbner basis methods and one on the basic concepts of invariant theory which prepare the ground for the algorithms Then algorithms for computing invariants of

finite and reductive groups are discussed Particular emphasis lies on interrelations between structural properties of invariant rings and computational methods Finally the book contains a chapter on applications of invariant theory covering fields as disparate as graph theory coding theory dynamical systems and computer vision The book is intended for postgraduate students as well as researchers in geometry computer algebra and of course invariant theory The text is enriched with numerous explicit examples which illustrate the theory and should be of more than passing interest More than ten years after the first publication of the book the second edition now provides a major update and covers many recent developments in the field Among the roughly 100 added pages there are two appendices authored by Vladimir Popov and an addendum by Norbert A Campo and Vladimir Popov

Algebraic Groups and Number Theory Vladimir Platonov, Andrei Rapinchuk, Rachel Rowen, 1993-12-07 This milestone work on the arithmetic theory of linear algebraic groups is now available in English for the first time Algebraic Groups and Number Theory provides the first systematic exposition in mathematical literature of the junction of group theory algebraic geometry and number theory The exposition of the topic is built on a synthesis of methods from algebraic geometry number theory analysis and topology and the result is a systematic overview of almost all of the major results of the arithmetic theory of algebraic groups obtained to date

Finite Groups I Bertram Huppert, 2025-05-05 Since its publication in 1967 Bertram Huppert's influential *Endliche Gruppen I* has remained a standard reference on group theory with its clear precise and complete exposition The present volume makes this classic text available in English for the first time updated with modern notation and notes In addition to foundational material the book contains the theory of permutation groups linear groups p groups nilpotent groups and solvable groups as well as the transfer homomorphism and ordinary representation theory All topics are fully developed and accessible to students with a basic knowledge of algebra Its comprehensive coverage and inclusion of more advanced topics make this self contained treatise an invaluable resource for graduate students and researchers

A Guide to Quantum Groups Vyjayanthi Chari, Andrew N. Pressley, 1995-07-27 Since they first arose in the 1970s and early 1980s quantum groups have proved to be of great interest to mathematicians and theoretical physicists The theory of quantum groups is now well established as a fascinating chapter of representation theory and has thrown new light on many different topics notably low dimensional topology and conformal field theory The goal of this book is to give a comprehensive view of quantum groups and their applications The authors build on a self contained account of the foundations of the subject and go on to treat the more advanced aspects concisely and with detailed references to the literature Thus this book can serve both as an introduction for the newcomer and as a guide for the more experienced reader All who have an interest in the subject will welcome this unique treatment of quantum groups

Representations Of Finite And Lie Groups Charles B Thomas, 2004-10-08 This book provides an introduction to representations of both finite and compact groups The proofs of the basic results are given for the finite case but are so phrased as to hold without change for compact topological groups with an invariant integral replacing the sum over the

group elements as an averaging tool Among the topics covered are the relation between representations and characters the construction of irreducible representations induced representations and Frobenius reciprocity Special emphasis is given to exterior powers with the symmetric group S_n as an illustrative example The book concludes with a chapter comparing the representations of the finite group $SL_2(\mathbb{F}_p)$ and the non compact Lie group $SL_2(\mathbb{R})$
