

Leukotriens (Slow-Reacting Substance of Anaphylaxis, SRS-A)

- **Cysteinyl LTs ($\text{LTC}_4/\text{D}_4/\text{E}_4/\text{F}_4$)** cause potent vasoconstriction & small airway constriction
 - They increase tracheal mucus secretion

Srs A To Leukotrienes:

The Leukotrienes Lawrence Chakrin, 2012-12-02 The Leukotrienes Chemistry and Biology discusses the significant scientific progress of leukotrienes from the discovery of slow reacting substance to the chemical identification of a mixture of leukotrienes Composed of 11 chapters the book presents an enormous increase in research on the chemistry and biology of these and related substances especially as they relate to the etiology of allergic and inflammatory diseases After briefly discussing the continuing perspectives on the leukotriene biology the book describes the structure synthesis formation and biological actions of leukotrienes This is followed by a discussion on arachidonic metabolism for the development of therapeutic agents specifically designed to either inhibit the synthesis or antagonize the effects of the leukotrienes The book also looks into the biochemical and pharmacologic control of the synthesis and actions of leukotrienes The information is considered in the context of the specific enzymes in the pathway that may be affected by any given agent The in vivo studies on the pulmonary mechanical effect of leukotrienes the pharmacologic activity of leukotriene receptors and the antagonistic property of peptidoleukotrienes as an approach to allergic disease treatment are considered in the concluding chapters of the book This book will be of value to scientists and researchers interested in hypersensitivity reactions inflammation and allergic diseases *Leukotrienes and Prostacyclin* F. Berti, 2012-12-06 **Novel Inhibitors of Leukotrienes** Giancarlo

Folco, Bengt Samuelsson, Robert C. Murphy, 2012-12-06 Many new antileukotriene drugs are now marketed as antiasthma drugs and represent the first new drugs in this field since the 1970s This book covers the steps that have led to the discovery and development of these new drugs and offers detailed descriptions of their clinical applications The review chapters on the main aspects of basic and applied leukotriene research are written by leading specialists in the field and the volume takes a new approach in presenting information of particular interest to both scientists and clinicians in the fields of asthma inflammation and allergic diseases *Advances in Immunopharmacology* J. W. Hadden, D. A. Willoughby, 2013-10-22 The

second of two volumes covering the most recent developments in this new field Like the previous volume this book brings together the two fields of immunology and pharmacology and offers a review format for advances in basic aspects as well as an update in discussion format of therapy related advances *The Reticuloendothelial System* S.M. Phillips, M.R.

Escobar, 2013-04-17 This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial RE Society and bio medical scientists in general who are interested in the intricate system of cells and molecular moieties derived from those cells which constitute the RES It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular system Nevertheless because of historical developments and current interest in the subject by investigators from many diverse areas it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology biochemistry phylogeny and ontogeny physiology and pharmacology as well as

clinical areas including immunopathology cancer infectious diseases allergy and hypersensitivity It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines The treatise editors and their editorial board consisting predominantly of the editors of individual volumes and enormous task forces are extremely grateful for the enthusiastic cooperation undertaken by members of the biomedical community in general and especially Japanese Reticulocyte by members of the American as well as European Hematological Societies

Current Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 *Leukotrienes* Ian Rodger, Jack H. Botting, Sven-Erik Dahlén, 2012-12-06 In the two decades since the elusive slow reacting substance of anaphylaxis SRS A was identified as a product of the action of the 5 lipoxygenase enzyme on arachidonic acid it has been well established that the leukotrienes are key mediators of both allergy and inflammation Their release by allergen or other challenge has been demonstrated in the lungs of asthmatic subjects and measurement of urinary leukotriene concentrations in such patients has been shown to be a valuable non invasive indicator Significant progress has been made towards the characterization of the leukotriene receptor subtypes exemplified by the cloning of the LTB4 receptor earlier this year Coupled with this there has been a continued elucidation of signal transduction mechanisms underlying receptor activation Consequent upon these advances has been the development of potent antagonists of the CysLT receptor J and both these and inhibitors of leukotriene biosynthesis have entered clinical practice in the therapy of asthma In this clinical setting antagonists of the CysLTJ receptor have been shown to be an effective therapy in chronic asthmatics against antigen and exercise induced bronchoconstriction and in aspirin intolerant asthmatics The advent of this new class of agents promises to change the way in which asthmatic patients are currently treated
