Habenicht,2012-12-06 Major advances have been made in the understanding of the molecular mechanisms of atherosclerosis the disease that still affects more than 50 percent of the population in the highly industrialized countries This volume covers the most recent advances in the treatment of hyperlipidemia It represents a necessary update because molecular mechanisms of atherogenesis have been discovered in the past few years and their molecular mechanisms of action identified Extensively treated are the molecular mechanisms of disease etiology of arteriosclerosis in relation to the major risk factor hyperlipidemia rationale for more effective treatment of this disease by dietary means the treatment of associated or causing diseases and the treatment using hypolipidemic drugs [Pan Vascular Medicine](#) Peter Lanzer,Eric J. Topol,2013-12-20 The textbook provides an interdisciplinary and integrated perspective of modern vascular cure Written by experts the text proceeds from fundamental principles to advanced concepts The book is divided into four parts each focusing on different basic concepts of vascular cure All fundamental principles of the area are clearly explained to facilitate vascular diagnostics and treatment in clinical practice It is aimed at junior practitioners and experts **Oxidative Stress, Inflammation and Atherosclerosis-Related Diseases: From basic to clinical research** Qiang Liu,Mark Slevin,Wen-Jun Tu,2023-11-27 Atherosclerosis can affect any artery in the body including arteries in the heart brain arms legs pelvis and kidneys As a result different diseases ischemic heart disease carotid artery disease peripheral artery disease ischemic stroke and chronic kidney disease may develop based on which arteries are affected Atherosclerosis related diseases are a global crisis and require a global response The increasing global crisis in atherosclerosis related diseases is a barrier to development goals including poverty reduction health equity economic

stability and human security There is a synergic action between genetic ambient local and systemic factors and ultimately the progression of atherosclerosis is responsible for coronary heart disease CHD and its complications such as unstable in crescendo angina myocardial infarction and sudden death peripheral arterial disease and ischemic stroke Recent investigations show that mitochondrial alterations oxidative stress and inflammation are inextricably linked and play major roles in the onset and development of atherosclerosis related diseases Long term oxidative stress autophagy and vascular inflammation could lead to atherosclerosis related diseases The evidence of oxidative stress inflammation autophagy mitochondrial dynamic dysfunction and the interaction of those factors had been proposed *Atherothrombosis and Coronary Artery Disease* Valentin Fuster, Eric J. Dhalla, Arun

Chockalingam, H. Ivan Berkowitz, Pawan K. Singal, 2012-12-06 The Frontiers in Cardiovascular Health varies between and within nations depend ing upon the level at which the battle is fought for better cardiovascular health According to the 1997 World Health Report 15 million deaths i e 30% of the total number of deaths were attributable to cardiovascular diseases and this number is on the rise The projection for the year 2020 is quite alarming with an expected cardiovascular mortality reaching 50 million Much of this burden is projected to occur in developing countries more specifically in the most populous countries of the world namely China and India These countries are already burdened with infectious and parasitic diseases and are trying to eradicate such diseases With increasing life expectancies people all over the world especially in developing coun tries are exposed to degenerative atherosclerosis resulting in increased cardiovascu lar mortality and morbidity In developing countries resources available for health care are very limited For example many of the African countries spend less than 10 per person per year on his her entire health care let alone cardiovascular health The average health care budget for nearly two thirds of the global population is well below 100 per year on a per capita basis Therefore in developing countries health promotion and primary prevention are the frontiers by necessity Improving awareness and health education is not only a matter of choice but is an absolute necessity Textbook of Cardiovascular Medicine Eric J. Phospholipases in Health and Disease Paramjit S. Tappia, Naranjan S. Dhalla, 2014-03-13 Phospholipases generate lipid signaling molecules through their hydrolytic action on phospholipids and are known to regulate function of a variety of cells under normal and diseased conditions While several physiological biochemical and molecular techniques have identified key players involved in different disease processes phospholipases have also emerged as critical players in the pathogenesis of a number of different diseases including cancer and heart disease In addition phospholipases are also implicated in such conditions as brain disorder injury kidney and immune cell dysfunction Phospholipases in Health and Disease is a compilation of review articles dedicated to the study of the field with respect to biochemical and molecular mechanisms of normal and abnormal cell function The wide range of area covered here is of interest to basic research scientists clinicians and graduate students who are engaged in studying pathophysiological basis of a variety of diseases Furthermore this book highlights the potential of the different phospholipases as therapeutic targets as well as part of prevention strategies Twenty three articles in this book are organized in four sections that are designed to emphasize the most characterized forms of the phospholipases in mammalian cells The first section discusses general aspect of phospholipases Section two covers the role and function of phospholipase A in different pathophysiological conditions The third section is focussed on phospholipase C which is believed to play a central role in transmembrane signaling The final section covers phospholipase D which is present in a variety of different cells The book illustrates that the activation of phospholipases is of fundamental importance in signal transduction affecting cell function Overall this book

discusses the diverse mechanisms of phospholipase mediated signal transduction in different pathophysiological conditions and raises the possibility of specific forms of phospholipases serving as novel targets for drug development
