Staff Studies For The World Economic Outlook World Economic And Financial Surveys:

Staff Studies for the World Economic Outlook, 1997 International Monetary Fund, 1998-01-16 These studies provide supporting material for the analysis and scenarios in the World Economic Outlook *Staff Studies for the World Economic Outlook* International Monetary Fund, 1986-01-01 This paper reviews recent analytical and empirical research on the determination of employment to provide a framework for evaluating the merits of alternative policies to cope with unemployment Particular emphasis is placed on the mechanisms of employment and wage determination described in recent studies The lack of any systematic relationship between countries long run growth and employment performances reflects the fact that output per person employed labor productivity or conversely the labor intensity of production has developed quite differently across countries The main mechanism through which the rise in real wages has prevented greater employment gains in Europe over the past ten to fifteen years seems to have been a substitution of capital for labor which has lowered the labor intensity of production significantly more than in the United States There are a number of important caveats with respect to the apparent relationship between differences in employment and labor cost developments across countries **World Economic and Financial Surveys** International Monetary Fund, 1988-01-01 This paper assesses recent trends in international capital markets It reviews in particular the forces currently reshaping the markets of industrial countries and confronting financial institutions with major challenges For the international capital markets 1988 was generally a year of recovery The international securities markets depressed during the second and third quarters of 1987 and badly shaken by the October market break rebounded in 1988 Intensifying competition and changing regulatory requirements characterize contemporary financial markets Competition has been fostered by the internationalization of institutions the liberalization of domestic markets technological advances in data processing and telecommunications and financial product innovations that more extensively link traditional banking and securities markets A fundamental task of financial intermediaries is to appraise and assume risk and to charge for it appropriately As a result of regulatory change the growth of derivative product markets and technological innovation competitive pressure appears to be increasing the general level of risk assumed by intermediaries while only partially providing the tools needed to manage that risk *World Economic and Financial Surveys, Primary Commodities, 1989* International Monetary Fund, 1989-01-01 This paper provides an analysis of the market developments in 1988 with respect to primary commodities and the outlook for these commodities in the near and medium term Attention is focused on the major nonfuel primary commodities traded in international markets Movements in the overall price index and in price indices for the major groups of commodities have been mirrored by an inverse movement in stocks of commodities Beginning of year stocks of all nonfuel commodities measured in terms of months of consumption increased during the first half of the 1980s and peaked in 1986 Movements in primary commodity prices convey important information in several ways they signal changes in the major source of export earnings for most developing

countries they indicate changes in a significant component of the cost of producing many manufactured goods and they may be a helpful leading indicator of changes in inflation in industrial countries The negotiating groups established for the Uruguay Round met on a number of occasions throughout the year to discuss a wide range of issues *1989 World Economic and Financial Surveys* International Monetary Fund,1989-01-01 This paper summarizes major measures taken in the international exchange and trade systems in 1988 and developments in exchange arrangements and the evolution of exchange rates The exchange arrangements adopted by members since 1973 cover a broad spectrum of degrees of flexibility from single currency pegs to a freely floating system Most countries have adopted arrangements that fall clearly into one or another of the major categories of the present classification system adopted by the IMF in 1982 and countries with dual markets usually have one market that is clearly more important than the other which allows accurate classification by major market Changes in IMF members arrangements for their currencies during this decade have shown a distinct tendency to move toward more flexible arrangements and away from single currency pegs continuing a trend that began in the mid 1970s A qualitative sense of the significance of the trend toward more flexible arrangements can be conveyed by the degree that world trade is affected by countries adopting different arrangements **1992 World Economic and Financial Surveys** International Monetary Fund,1992-01-01 This paper describes that in developing countries the moves toward more flexible exchange rate arrangements and liberalization of exchange controls often occurred in the context of comprehensive macroeconomic adjustment programs supported by the IMF These programs featured a broad range of policy actions including an increasing emphasis on structural reforms aimed at improving resource allocation and enhancing the supply response of the economy With respect to restrictive systems the trend toward liberalization of nontrade current and capital transactions continues primarily because it is seen as ineffective even counterproductive to try to control such financial flows This trend contrasts with trade where it appears that some major participants have been awaiting the outcome of the Uruguay Round before further reducing restrictions A single currency peg has been the exchange arrangement most frequently used by developing countries of which over one third currently have such an arrangement This type of peg has the merit of being easy to administer and is generally chosen by countries that have a large share of foreign exchange transactions in the currency chosen as the peg **1993 World Economic and Financial Surveys** International Monetary Fund,1993-01-01 This paper provides information on private market financing for developing countries covering developments since August 1992 Progress in dealing with bank debt problems has been based in large part on persistence in the pursuit of stabilization and reform programs Such programs have resulted in strengthened external positions that have allowed debtor countries to accumulate reserves for use in debt reduction operations All of the countries where negotiations are now continuing had at some point suspended payments on medium and long term debt Banks have recognized that resumption of regular albeit partial payments can be politically difficult in the absence of a quid pro quo The group of middle

and lower middle income countries with debt problems still to come to terms with bank creditors on debt reduction packages is now limited Many of these remaining countries including Bulgaria Ecuador Panama Peru and Poland have already begun negotiations with creditor banks *Staff Studies for the World Economic Outlook* Fondo Monetario Internacional (Washington),1989 **World Economic and Financial Surveys, Primary Commodities, 1988** International Monetary Fund,1988-01-01 This paper provides an analysis of recent developments relating to the major nonfuel primary commodities traded in international markets Particular attention is given to market price movements and the factors underlying these movements A number of adjustments in the international trading environment in which commodity prices are determined occurred in 1987 and even more significant changes are expected in the years ahead Some of the adjustments in the past year affected only bilateral trading arrangements while others such as certain initiatives undertaken in the Uruguay Round of the General Agreement on Tariffs and Trade GATT negotiations and those relating to some international commodity agreements were of a multilateral nature The present round the eighth in a series of GATT negotiations held since 1947 involves two elements that are of particular relevance to international trade in commodities Although only small changes were made in 1987 in the various multilateral schemes that exist to compensate countries for export earnings shortfalls a significant increase in such financing in 1987 had the effect of stabilizing many developing countries export earnings thereby maintaining their capacity to import and buoying world trade **Staff Studies for the World Economic Outlook** ,1987

1994 World Economic & Financial Surveys; Official Financing for Dev. Countries International Monetary Fund,1994-01-01 This paper focuses mainly on official bilateral and multilateral financing for countries that have rescheduled their debts to official bilateral creditors In contrast to the approaches taken by private lenders official creditors have continued to provide new financing on a large scale to countries with debt servicing difficulties that implement adjustment and reform programs Financial support has been provided through a wide variety of instruments and channels For the low income rescheduling countries as a group total financial assistance has been about as large as these countries own export earnings in every year since 1986 The recent trends in official financing have important ramifications for developing countries Access to external financing from official sources is likely to remain high for those countries whose adjustment and reform efforts provide assurances that resources will be used efficiently Conversely countries with uneven records of policy implementation particularly as regards payments arrears are likely to find difficulty in attracting financial support World Economic Outlook, May 1998 International Monetary Fund. Research Dept.,1998-05-08 The World Economic Outlook published twice a year in English French Spanish and Arabic presents IMF staff economists analyses of global economic developments during the near and medium term Chapters give an overview of the world economy consider issues affecting industrial countries and economics in transition to market and address topics of pressing current interest Annexes boxes charts and an extensive statistical appendix augment the text *Staff Studies for The World Economic Outlook* ,1997

Staff Studies for the World Economic Outlook World economic outlook International Monetary Fund, 1980 **World Economic Outlook** International Monetary Fund, 1997-10-15 This paper presents an outlook for the world economy for 1997-98. With world output expected to expand by some 4.1-4.4 percent in both 1997 and 1998, the strongest pace in a decade, the global economy is enjoying the fourth episode of relatively rapid growth since the early 1970s. The expansion is underpinned by continued solid growth with low inflation in the United States and the United Kingdom, a strengthening recovery in Canada, a broadening of recovery across continental western Europe, notwithstanding persistent weakness in domestic demand in some of the largest countries. *Research Activities of the IMF, January 1991-December 1999* International Monetary Fund, 2000-01-01 Research activity in the IMF emphasizes the links between the organization's policy and operational concerns. The main objectives of research is IMF staff understanding of policy and operational issues relevant to the institution and to improve the analytical quality of the work prepared for management and the Executive Board and the advice provided to member countries. The scope of research in the IMF is defined by the purposes and functions of the institution. In order to foster innovation and ensure quality control, the IMF makes much of its research available outside the institution and encourages staff to interact with academia and other research organizations through conferences, seminars, and occasional joint research projects. The visiting scholars program has also enhanced the quality of research done in the IMF. This program brings in leading members of the economics profession from around the world to assist in the preparation of papers for the Executive Board and to conduct research on IMF-related issues. **World Economic Outlook, May 1999** International Monetary Fund. Research Dept., 1999-05-28 The World Economic Outlook published twice a year in English, French, Spanish, and Arabic presents IMF staff economists' analyses of global economic developments during the near and medium term. Chapters give an overview of the world economy, consider issues affecting industrial countries, developing countries, and economies in transition to market, and address topics of pressing current interest. Annexes, boxes, charts, and an extensive statistical appendix augment the text. World Economic and Financial Surveys, 1987 International Monetary Fund, 1987-01-01 This paper provides an assessment of trends in the international capital markets, including most notably recent market shocks to the financial system and developments in the debt situation. It also reviews the scope of progress achieved over the last few years in strengthening the financial system. Given the extensive changes that have taken place in domestic and international financial markets, the authorities in all industrial countries have begun to adapt their supervisory and regulatory framework to reflect better the new financial environment. These efforts acquired added importance with the recent financial market shocks. The outlook for lending to developing countries that have experienced payments difficulties has deteriorated during the past year. For most of these countries, the prospect for a resumption of spontaneous general purpose bank lending appears very limited. In gauging the vulnerability of the financial system, it should be borne in mind that adverse economic circumstances affecting sovereign loans could have a simultaneous negative impact on domestic credit.

quality In some countries bank exposures to energy agriculture real estate shipping and elements of heavy industry remain problematic World Economic Outlook and International Capital Markets Interim Assessment, 1998 International Monetary Fund,1999-01-29 This interim update of the IMF s latest regular reports on the World Economic Outlook published in October 1998 and International Capital Markets September 1998 provides a preliminary assessment of the unusual turbulence in international financial markets during much of the period August November 1998 and its implications for the global economic outlook and for policy The survey of prospects and policies is the product of a comprehensive interdepartmental review of world economic developments which draws primarily on information the IMF gathers through its consultations with member countries For its evaluation of developments in financial markets the report also draws in part on informal discussions with commercial and investment banks securities firms stock and futures exchanges and regulatory and monetary authorities **World Economic Outlook, April 1989** International Monetary Fund. Research Dept.,1989-01-01 This paper highlights that the world economic condition improved significantly during 1988 In industrial countries output growth strengthened markedly in an environment of moderate inflation World trade expanded at its fastest rate since 1984 which had important spillover effects on many developing countries particularly the exporters of manufactures significant progress was made in reducing external imbalances among the major industrial countries and the aggregate debt to exports ratio of developing countries was reduced At the same time several aspects of the current situation continue to demand the attention of policymakers
