Some Questions In The Theory Of Moments:

Some Questions in the Theory of Moments Naum Il'ich Akhiezer, Mark Grigor'evich Kreĭn, 1962 **Some Questions in the Theory of Moments** Mark Grigor'evich Kreĭn, 1968 Some Questions in the Theory of Moments N. I. Ahiezer, Mark Grigor'evich Krein, 1974 **Some questions in the theory of moments** Naum I. Achiezer, 1962 **Some Questions in the Theory of Moments** Naum Il'ich Akhiezer, Mark Grigorevich Krein, 1985 **Some Questions in the Theory of Moments** Naum Il'ich Akhiezer, Mark Grigorevich Krein, 1985 *Some Questions in the Theory of Moments* Naum Il'ich Akhiezer, Mark Grigor'evich Kreĭn, 1962 **The Classical Moment Problem and Some Related Questions in Analysis** N.I. Akhiezer, 2020-12-01 The mathematical theory for many application areas depends on a deep understanding of the theory of moments These areas include medical imaging signal processing computer visualization and data science The problem of moments has also found novel applications to areas such as control theory image analysis signal processing polynomial optimization and statistical big data The Classical Moment Problem and Some Related Questions in Analysis presents a unified treatment of the development of the classical moment problem from the late 19th century to the middle of the 20th century Important connections between the moment problem and many branches of analysis are presented In this self contained text readers will find a unified exposition of important classical results which are difficult to read in the original journals as well as a strong foundation for many areas in modern applied mathematics Researchers in areas that use techniques developed for the classical moment problem will find the book of interest *Some Questions in the Theory of Moments* *Theory of Moments* Mark Grigor'evich Krein, 1962 **Solution of the Truncated Complex Moment Problem for Flat Data** Raúl E. Curto, Lawrence A. Fialkow, 1996 We introduce a matricial approach to the truncated complex moment problem and apply it to the case of moment matrices of flat data type for which the columns corresponding to the homogeneous monomials in z and $\bar{z}$ of highest degree can be written in terms of monomials of lower degree We discuss the connection between complex moment problems and the subnormal completion problem for 2 variable weighted shifts and present in detail the construction of solutions for truncated complex moment problems associated with monomials of degrees one and two **Matrix Completions, Moments, and Sums of Hermitian Squares** Mihály Bakonyi, Hugo J. Woerdeman, 2011-07-18 Intensive research in matrix completions moments and sums of Hermitian squares has yielded a multitude of results in recent decades This book provides a comprehensive account of this quickly developing area of mathematics and applications and gives complete proofs of many recently solved problems With MATLAB codes and more than 200 exercises the book is ideal for a special topics course for graduate or advanced undergraduate students in mathematics or engineering and will also be a valuable resource for researchers Often driven by questions from signal processing control theory and quantum information the subject of this book has inspired mathematicians from many subdisciplines including linear algebra operator theory measure theory and complex function theory In turn the applications

are being pursued by researchers in areas such as electrical engineering computer science and physics The book is self contained has many examples and for the most part requires only a basic background in undergraduate mathematics primarily linear algebra and some complex analysis The book also includes an extensive discussion of the literature with close to 600 references from books and journals from a wide variety of disciplines

Functional Analysis And Related Topics - Proceedings Of The International Symposium Shozo Koshi, 1991-10-31 The objective of this symposium is to discuss the recent developments in the various areas of functional analysis This volume consists mainly of articles in the fields of topological algebra Banach spaces function spaces harmonic analysis operator theory and application of functional analysis

Encyclopaedia of Mathematics (set) Michiel Hazewinkel, 1994-02-28 The Encyclopaedia of Mathematics is the most up to date authoritative and comprehensive English language work of reference in mathematics which exists today With over 7 000 articles from A integral to Zygmund Class of Functions supplemented with a wealth of complementary information and an index volume providing thorough cross referencing of entries of related interest the Encyclopaedia of Mathematics offers an immediate source of reference to mathematical definitions concepts explanations surveys examples terminology and methods The depth and breadth of content and the straightforward careful presentation of the information with the emphasis on accessibility makes the Encyclopaedia of Mathematics an immensely useful tool for all mathematicians and other scientists who use or are confronted by mathematics in their work The Encyclopaedia of Mathematics provides without doubt a reference source of mathematical knowledge which is unsurpassed in value and usefulness It can be highly recommended for use in libraries of universities research institutes colleges and even schools

Flat Extensions of Positive Moment Matrices: Recursively Generated Relations Raúl E. Curto, Lawrence A. Fialkow, 1998 In this book the authors develop new computational tests for existence and uniqueness of representing measures μ in the Truncated Complex Moment Problem $\gamma_{ij} = \int z^i \bar{z}^j d\mu$, $0 \leq i, j \leq 2n$ Conditions for the existence of finitely atomic representing measures are expressed in terms of positivity and extension properties of the moment matrix $M_n(\gamma)$ associated with γ equiv $\gamma_{2n} \gamma_{00} \dots \gamma_{0, 2n} \dots \gamma_{2n, 0} \gamma_{00, 0}$ This study includes new conditions for flat i.e rank preserving extensions M_{n+1} of M_n $g \geq 0$ each such extension corresponds to a distinct rank M_n atomic representing measure and each such measure is minimal among representing measures in terms of the cardinality of its support For a natural class of moment matrices satisfying the tests of recursive generation recursive consistency and normal consistency the existence problem for minimal representing measures is reduced to the solubility of small systems of multivariable algebraic equations In a variety of applications including cases of the quartic moment problem $n=2$ the text includes explicit constructions of minimal representing measures via the theory of flat extensions Additional computational texts are used to prove non existence of representing measures or the non existence of minimal representing measures These tests are used to illustrate in very concrete terms new phenomena associated with higher dimensional moment problems that do not appear in

the classical one dimensional moment problem **Featured Reviews in Mathematical Reviews 1997-1999** Donald G. Babbitt, Jane E. Kister, 2000-05-05 This second volume of Featured Reviews makes available special detailed reviews of some of the most important mathematical articles and books published from 1997 through 1999 Also included are excellent reviews of several classic books and articles published prior to 1970 Among those reviews for example are the following Homological Algebra by Henri Cartan and Samuel Eilenberg reviewed by G Hochschild Faisceaux algebriques coherents by Jean Pierre Serre reviewed by C Chevalley and On the Theory of General Partial Differential Operators by Lars Hormander reviewed by J L Lions In particular those seeking information on current developments outside their own area of expertise will find the volume very useful By identifying some of the best publications papers and books that have had or are expected to have a significant impact in applied and pure mathematics this volume will serve as a comprehensive guide to important new research across all fields covered by MR **Construction of Random Signals from Their Higher Order Moments**

Ismail Chamseddine, 2013-05-24 The book treats the problem of constructing a probability density from moments comparing with other approaches like the empirical distribution function The argumentation is based on deeper considerations of complexity and duality and proposes the problem as model for concept formation in the human mind www.momentproblem.blogspot.com **Finite-dimensional Linear Analysis** I. M. Glazman, 2006-01-01 A sequence of 2 400 propositions and problems features only hints Suitable for advanced undergraduates and graduate students this unique approach encourages students to work out their own proofs 1974 edition *Sum of Even Powers of Real Linear Forms* Bruce Arie Reznick, 1992

This work initiates a systematic analysis of the representation of real forms of even degree as sums of powers of linear forms and the resulting implications in real algebraic geometry number theory combinatorics functional analysis and numerical analysis The proofs utilize elementary techniques from linear algebra convexity number theory and real algebraic geometry and many explicit examples and relevant historical remarks are presented **New Aspects in Interpolation and Completion Theories** I. Gohberg, 2012-12-06 This volume consists of eight papers containing recent advances in interpolation theory for matrix functions and completion theory for matrices and operators In the first paper D Alpay and P Loubaton The tangential trigonometric moment problem on an interval and related topics a trigonometric moment problem on an interval for matrix valued functions is studied The realization approach plays an important role in solving this problem The second paper M Bakonyi V G Kaftal G Weiss and H J Woerdeman Max imum entropy and joint norm bounds for operator extensions is dedicated to a matrix completion problem In it is considered the problem when only the lower triangular part of the operator entries of a matrix is identified Completions which have simultaneously a small usual norm and a small Hilbert Schmidt norm are considered Bounds for these norms are obtained The analysis of the maximum entropy extension plays a special role The paper contains applications to nest algebras and integral operators The third paper J A Ball I Gohberg and M A Kaashoek Bitangential interpola tion for input output operators of time varying systems the discrete time case contains

solutions of time varying interpolation problems The main attention is focused on the time varying analog of the Nevanlinna Pick tangential problem in the case where the interpolation conditions appear from two sides The state space theory of time varying systems play an important role

Selected Topics in Approximation and Computation Marek

Kowalski, Christopher Sikorski, Frank Stenger, 1995-08-31 Selected Topics in Approximation and Computation addresses the relationship between modern approximation theory and computational methods The text is a combination of expositions of basic classical methods of approximation leading to popular splines and new explicit tools of computation including Sinc methods elliptic function methods and positive operator approximation methods It also provides an excellent summary of worst case analysis in information based complexity It relates optimal computational methods with the theory of s numbers and n widths It can serve as a text for senior graduate courses in computer science and applied mathematics and also as a reference for professionals
