The Study of Temperament Robert Plomin, Judy Dunn, 2013-08-21 First Published in 1986 The modern history of temperament research began in the late 1950s with the New York Longitudinal Study Twenty five years later temperament has become a major focus of research on early developing emotional and social traits The impetus for this growth in temperament research stems from the merging of several shifts in child development research from a view of the child as passive to a model of the child as an active transacting partner with the environment increasing interest in individual differences in development an expansion of research on emotional and social development and a clear change from an exclusive reliance on environmental explanations of developmental differences to a more balanced perspective that recognizes the possibility of biological as well as environmental influences Most stimulating is the multidisciplinary flavor of temperament research clinicians infancy researchers cultural anthropologists and behavioral geneticists have each for their own reasons been drawn to the study of temperament Each of these fields is represented in the present volume which provides the first overview of the growing field of temperament

The Development Of Sensory, Motor And Cognitive Capacities In Early Infancy George Butterworth, Francesca Simion, 2013-06-20 Research on the development of human infants has revealed remarkable capacities in recent years Instead of stressing the limitations of the newborn the modern approach is now more optimistically based on an assessment of the adaptive capabilities of the infant Innate endowment coupled with interaction with the physical and social environment enables a developmental transition from processes deeply rooted in early perception and action to the cognitive and language abilities typical of the toddler This book reviews a number of issues in early human development It includes a reconceptualization of the role of perception at the origins of development a

reconciliation of psychophysical and ecological approaches to early face perception and building bridges between biological and psychological aspects of development in terms of brain structure and function Topics covered include basic exploratory processes of early visual systems in early perception and action face perception in newborns species typical aspects of human communication imitation perception of the phonetic structure of speech origins of the pointing gesture handedness origins and development theoretical contributions on perception and cognition implicit and explicit knowledge in babies sensory motor coordination and cognition information processing and cognition perception habituation and the development of intelligence from infancy

The Development of Attention J.T. Enns,1990-08-23 This volume presents an up to date review of developmental aspects of human attention by leading researchers and theorists The papers included in the first section consider the ways in which newborns are pretuned to visual auditory linguistic and social features of their environment as well as how selectivity to these features changes in the first year of life The following section examines properties of the visual and auditory world that are attention getting for children Developmental increases in capacity and strategy are also examined in this section through the study of perception memory problem solving and language Section III explores several ways in which selective processing can fail in development e g autism hyperactivity and psychopathy while Section IV reports on those aspects of selectivity that are lost and preserved in the aging process

The Cambridge Handbook of Intelligence Robert J. Sternberg,2020-01-16 Written by the foremost experts in human intelligence It not only includes traditional topics such as the nature measurement and development of intelligence but also contemporary research into intelligence and video games collective intelligence emotional intelligence and leadership intelligence In an area of study that has been fraught with ideological differences this Handbook provides scientifically balanced and objective chapters covering a wide range of topics It does not shy away from material that historically has been emotionally charged and sometimes covered in biased ways such as intellectual disability race and intelligence culture and intelligence and intelligence testing The overview provided by this two volume set leaves virtually no area of intelligence research uncovered making it an ideal resource for undergraduates graduate students and professionals looking for a refresher or a summary of the new developments

Constancy and Change in Human Development Orville Gilbert Brim (Jr.),1980 How malleable is human nature Can an individual really change in meaningful ways Or are there immutable limits on the possibilities of human growth set in place by genes and early childhood experiences These questions touch our deepest political and personal concerns and have long been a matter of fierce debate in the behavioral sciences

Developing Brain Behaviour John Dobbing,1997-08-13 Certain long chain polyunsaturated fatty acids LCPUFAs are thought to be essential components of the nutrition of infants including those prematurely born in the sense that they cannot be synthesised by the immature organism and must therefore be supplied in the diet Breast milk contains these substances but many manufactured infant formulae do not An absence of dietary LCPUFAs has been thought to affect the development of the brain and retina possibly leading to

abnormalities in cognitive and visual function Considerable multidisciplinary research has been carried out to investigate this proposition Diets free from LCPUFAs have been compared with supplemented formulae or with breast milk The conclusions from this research were critically examined by a group of leading paediatricians nutritionists experts in visual science and developmental behavioural scientists at a Dobbing Workshop held in the United States in late February 1997 Each of the Chapters was precirculated to the whole group commented on before the Workshop and then exhaustively discussed The Chapters and Commentaries which are published here have therefore undergone a more extensive peer review process than is usually the case

Handbook of Parenting Marc H. Bornstein, 2005-02-16 Despite the fact that most people become parents and everyone who has ever lived has had parents parenting remains a mystifying subject about which almost everyone has opinions but about which few people agree Striking permutations on the theme of parenting are emerging single parenthood blended families lesbian and gay parents and teen versus fifties first time moms and dads Divided into four volumes the Handbook of Parenting is concerned with different types of parents basic characteristics of parenting forces that shape parenting problems faced by parents and the practical sides of parenting Contributors have worked in different ways toward understanding all of these diverse aspects of parenting and look to the most recent research and thinking in the field to shed light on many topics every parent has wondered about Because development is too subtle dynamic and intricate to admit that parental caregiving alone determines the course and outcome of ontogeny volume 1 concerns how children influence parenting Volume 2 relates parenting to its biological roots and sets parenting in its ecological framework Volume 3 distinguishes among the cast of characters responsible for parenting and is revealing of the psychological make ups and social interests of those individuals Volume 4 describes problems of parenting as well as the promotion of positive parenting practices Written to be read and absorbed in a single sitting each chapter addresses a different but central topic in parenting and is rooted in current thinking and theory as well as classic and modern research on that topic All chapters follow a standard organization including an introduction to the chapter as a whole followed by historical considerations of the topic a discussion of central issues and theory a review of classic and modern research forecasts of future directions for theory and research and a conclusion In addition to considering their own convictions and research the chapter contributors present and broadly interpret all major points of view and central lines of inquiry

Communicating Meaning Boris M. Velichkovsky, Duane M. Rumbaugh, 2013-02-01 Dealing specifically with the origins and development of human language this book is based on a selection of materials from a recent international conference held at the Center of Interdisciplinary Research at the University of Bielefeld in Germany The significance of the volume is that it testifies to

paradigmatic changes currently in progress The changes are from the typical emphasis on the syntactic properties of language and cognition to an analysis of biological and cultural factors which make these formal properties possible The chapters provide in depth coverage of such topics as new theoretical foundations for cognitive research phylogenetic prerequisites and ontogenesis of language and environmental and cultural forces of development Some of the arguments and lines of research are relatively well known others deal with completely new interdisciplinary approaches As a result some of the authors conclusions are in part rather counterintuitive such as the hypothesis that language as a system of formal symbolic transformations may be in fact a very late phenomenon located in the sphere of socio cultural and not biological development While highly debatable this and other hypotheses of the book may well define research questions for the future

Helping Low Birth Weight, Premature Babies Ruth T. Gross, Donna Spiker, Christine W. Haynes, 1997 Each year in the United States 250 000 infants are born too soon weighing too little For these low birth weight premature infants the future is uncertain since they are at risk for a variety of serious medical and developmental problems including behavioral and learning disorders that may have damaging effects for the rest of their lives The extent to which a comprehensive early intervention program could improve or prevent these adverse outcomes was examined in the Infant Health and Development Program a randomized controlled trial involving almost 1 000 infants in eight cities in the United States This book describes in detail the program its research methodology the progress of the program and the results of the clinical trial The program was administered by an interdisciplinary team composed of physicians biostatisticians child development specialists and researchers from several disciplines It was instituted upon the discharge of the infants from the neonatal nursery and was maintained for three years One third of the infants were randomly assigned to an intervention group the remainder to a follow up group Infants in both groups received pediatric care and community referral services but only those in the intervention group participated in a program that included extensive home visits attendance at a child development center and group meetings for parents The results of the program proved to be clinically important at age three the children in the intervention group had significantly higher IQ scores greater cognitive development and fewer behavioral problems The implications of the findings for public policy are equally important for there is increasing interest in the prevention early detection and management of developmental disabilities in children as evidenced by such legislation as the Education for All Children Act Strategies to minimize the problems of low birth weight children with their potential for long term savings through the prevention of disabilities and their attendant costs could have significant repercussions in such governmental areas as medical care education and social welfare
