*Stabilizers for Photographic Silver Halide Emulsions: Progress in Chemistry and Application* Gunther Fischer, 2012-12-06

Stability is one of the most important performances required for silver halide photographic materials. In 1935 Dr E 1 Birr introduced the concept of the stabilization of photographic emulsions for the first time by inventing a most effective stabilizer 4-oxo-6-methyl-3,3a,7-tetraazaindene. Dr Birr's monograph *Stabilization of Photographic Silver Halide Emulsions* was published in 1974 and accepted as a reliable reference book by many photographic scientists and engineers. Since then silver halide photographic materials have been greatly improved and expanded through active and continual development of various kinds of technologies. Especially extensive efforts have been made to develop photographic materials with high sensitivity and rapid processing which rely upon the stability of photographic emulsions under various conditions. Thus the concept and technologies of stabilization of photographic silver halide materials have been expanded so extensively that many photographic scientists and engineers eagerly want a reliable new reference book on the stabilization of photographic emulsions. Dr Gunther Fischer is one of the most experienced and eminent scientists and engineers in the field of the stabilization of photographic materials with expanded concept. He has been involved in research on the stabilization of photographic emulsions since 1964 when he joined the Technical Scientific Laboratory in the Research and Development Department of the Photo Film Company Agfa Wolfen formerly headed by Dr Birr whom he succeeded in that position. I was deeply impressed by his fruitful and elaborate achievements in these fields.

**Advances in Heterocyclic Chemistry** Alan R. Katritzky, 2011-08-09

Written by established authorities in the field, the comprehensive reviews combine descriptive chemistry and mechanistic insight and yield an understanding of how the chemistry drives the properties. Volume 94 of *Advances in Heterocyclic Chemistry* commences with a review of cascade reactions on heterocyclic synthesis. The chapter presents a fascinating array of complex sequences which provide efficient routes to a wide variety of heterocyclic systems. The second chapter is the twelfth in the series on the organic chemistry of heterocyclic ligands in metallic complexes. The present contribution deals with the chemistry of polypyridine ligands in organomanganese and organorhenium complexes. Its current importance can be measured by the fact that of the nearly 700 references approximately half date from the last 10 years. Preparation of aminoisoxazoles and their utility in the synthesis of condensed systems are also covered. In the final chapter isothiazolium salts and their use in synthesis are reviewed. Many condensed S-N heterocyclic systems are described in this, the first review dedicated to this topic. Provides up to date material on a fast growing and highly topical subject area. Contains the latest research covering a wide variety of heterocyclic topics. Written by leading authorities and designed as a handbook for students and industry and academic researchers.
