Staining Of Facades:

Staining Of Facades Yit Lin Michael Chew, Phay Ping Tan, 2003-11-18 Facade staining is a centuries old building defect that is globally widespread Millions of dollars are wasted annually for its rectification A stained building looks old and worn out diminishing the value of the property and the confidence in occupying it The facade s durability may also be affected by staining Despite these wide and varying downstream implications facade staining can actually be foreseen and prevented if conscientious efforts are made at the building s planning and design stages This book provides insight into the underlying causes of facade staining and proposes an approach to address the root of the problem It aims to raise awareness of crucial factors that should be understood and considered in the prevention or minimization of facade staining hence reducing resource wastage in unnecessary maintenance work Staining of Facades will serve as a useful guide for students as well as practitioners in related professions such as architecture engineering building real estate and project and property management in their efforts to minimize the life cycle costs of buildings

Building Facades: A Guide To Common Defects In Tropical Climates Yit Lin Michael Chew, 1998-02-20 Much attention has been given to the increasing number of defects on building facades in relation to the construction industry s growing use of large panel curtain walls This book highlights the various types of defects commonly found on building facades under tropical conditions The facade elements discussed include natural stone glass metal sheeting plaster and tiling The causes of defects such as poor workmanship inadequate design and maintenance inappropriate use of materials and the action of environmental agents are evaluated The typical problems highlighted include cracking water penetration misalignment sealant defects discoloration staining efflorescence corrosion and tile delamination The causes of these defects and their implications for design

construction and maintenance are described. Illustrated with many photographs, this book will be a useful guide both to practising professionals and to undergraduate and graduate students.

Technical Due Diligence and Building Surveying for Commercial Property Adrian Tagg, 2018-09-03. Technical Due Diligence and Building Surveying for Commercial Property is the first book to introduce the process of technical due diligence (TDD) and examine the role of the building surveyor within the commercial property sector. The book outlines the processes that the surveyor must go through when performing a TDD inspection and report and most importantly covers in detail the typical pathology and defects encountered during TDD. Performing a TDD survey involves collecting, analysing and reporting on a huge amount of information often under specific contractual conditions. The book covers everything the surveyor needs to know in order to do a proper job and includes analysis of materials, life cycles and potential defects on an elemental basis with detail on individual components where necessary. Coverage includes an introduction to the TDD process and types of commercial buildings encountered, chapters outlining the life cycle and defects of structures, roofs, facades, finishes and services, hundreds of illustrations and photographs of defects, real world case studies and suggestions for further reading, a final chapter covering legal issues and technical details. This book fills a clear gap in the literature and is the first fully illustrated book on TDD dedicated to commercial building stock. It will help students and professionals to understand the process, the science involved and the reasons why defects occur as well as their evolution and long term impact.

Proceedings of CIRMARE 2023 João Carlos Gonçalves Lanzinha, Eduardo Linhares Qualharini, 2023-12-04. This book highlights the latest advances, innovations and applications in the field of resilience and adaptation of buildings and cities to climate change as presented by international researchers at the VI International Conference on Recovery, Maintenance and Rehabilitation of Buildings (CIRMARE 2023) held in Covilhã, Portugal on December 5-7, 2023. It covers a diverse range of topics such as accessibility of buildings and urban spaces, industrialization of rehabilitation processes, interventions in cultural heritage, building quality assessment, maintenance and requalification of built spaces, BIM and the digitization of construction, urban planning, circular economy in the construction sector, urban infrastructure, rehabilitation, near zero energy buildings, urban resilience and climate change, recovery of degraded urban areas, service life and pathologies in buildings. The contributions, which were selected by means of a rigorous international peer review process, present a wealth of exciting ideas that will open novel research directions and foster multidisciplinary collaboration among different specialists.

Historic Building Façades New York Landmarks Conservancy, 1997-04-24. Comprehensive in depth coverage from leading experts in the field. A historic building is a fragile resource that requires the finest care. Maintenance and rehabilitation of walls and facades call for a thorough understanding of the forces that cause deterioration, knowledge of the properties of building materials, up-to-date inspection tools and methods, and a solid command of renovation and repair techniques. In this complete reference manual, recognized experts provide state-of-the-art information and methodologies for the inspection, maintenance and restoration of historic buildings of virtually every

period style and material Each chapter opens with a general discussion of the facade material and the ways in which structural and decorative elements are vulnerable to an array of environmental forces After a detailed investigation of tools and techniques for inspection the text explores planning issues for the restoration or replacement of facade components Special features include Separate chapters on each major type of building material stonemasonry brick masonry terra cotta masonry cast stone mortar concrete cast iron sheet metal and wood An entire chapter on caulks and sealants 35 original line drawings and 43 black and white photos that help visualize technical information Selected success stories from preservation projects across the United States For architects building contractors and owners of historic buildings *Historic Building Facades* clarifies procedures helps identify sources of deterioration and offers solutions to even the most difficult maintenance and rehabilitation problems It is also an excellent reference for building preservationists architectural historians and students of building design and preservation

Prevention of Premature Staining in New Buildings Phil Parnham, 2002-11-01 The appearance of ugly staining early in a building's life ruins an otherwise pleasing appearance tarnishes the image of the owners and gives rise to costly refurbishment works In this book Phil Parnham raises a number of questions that should be considered whenever a new building is being designed or built These are why has staining become so prominent what causes premature staining which parts of new buildings are likely to be affected how can it be avoided By using a number of highly illustrated case studies the author answers these questions and ends by suggesting measures that should be taken by all design and construction professionals to prevent premature staining
