Abstract. Today, a customer is easy to express his opinions about a bought products thanks to accelerated development of social networks and ecommerce websites. These opinions are very useful indicators to evaluate the degree of the customers' real satisfaction. From that, the traders will emerge the strategies and predict the trends to get the directions for their products and businesses in the future. In this paper, we have built a dataset and executed many experiments based on the multiple classifiers with complementing lexicon features to increase the accuracy of sentiment polarities. The experimental section shows good results and proves our approach is reasonable.

Keywords: Machine learning · Text mining · Natural language processing · Sentiment analysis · User behavior

1 Introduction

Sentiment analysis task is a hot trend in natural language processing applied widely in many domains, especially in ecommerce system, this identifies the sentiment polarity between positive and negative comments. Through sentiment, managers of the brand and product can quickly get an overview of customer attitudes towards their brand at a certain time or within a certain period of time. Moreover, sentiment analysis also points to brand or product strengths and weaknesses in the eyes of the customers, which aspects are being appreciated and what are the focal points of negative discussion. In addition to monitor sentiment changes over a long period of time will tell brand health, which helps the brand managers and marketers to re-evaluate the performance and giving directions for the future campaigns. This not only improves the effectiveness of business, but also helps to be more proactive in preventing and handling crisis.

In this paper, we have proposed the sentiment analysis solution based on multiple classifiers with enhancing lexicon features. Our main contribution is to build the Vietnamese dataset from reputation ecommerce websites for sentiment analysis, apply preprocessing techniques for the dataset such as word segmentation, lowercase transformation, punctuation removal and feed more features to the feature vectors such as the adjective phrases, negation and emotional icons replacement. The experiments of
