**International Perspectives on Self-Regulation and Health** John G. Carlson, A. Ronald Seifert, 2013-11-21 An attractive feature of self regulation therapies is that instead of doing something to the patients they teach them to do something for themselves Furthermore the fact that the patient is able to do something to cope with his or her health problem can produce a significant reduction in the stress that may have contributed to that problem and in the additional stress that it produces While the idea that the mind can play a role in the health of the body and some therapeutic techniques based on this idea are not new remarkable scientific advances have been made recently in the area of self regulation and health There has been an exciting and rapidly accelerating increase in our basic science knowledge of homeostasis or in other words how the body regulates itself in order to maintain health Technical and conceptual advances are increasing our knowledge of the details of such regulation at all levels cells tissues organs organ systems and the body as a whole We are learning how the competing demands of different elements at each of these levels are adjusted by the brain which with its neural and humoral mechanisms is the supreme organ of integration of the body

**EEG and Evoked Potentials in Psychiatry and Behavioral Neurology** John R. Hughes, William P. Wilson, 2013-10-22 EEG and Evoked Potentials in Psychiatry and Behavioral Neurology discusses the two techniques of examining brain function electroencephalography EEG and evoked potentials The book also addresses conditions that fall under the umbrella term behavioral sciences and are associated with psychiatry and neurology The book begins by discussing current definitions of organic brain syndrome in order to delineate more clearly the processes

whose EEG correlates are to be described It then outlines the various EEG correlates of impaired central nervous system CNS dysfunction for a variety of specific organic etiologies Separate chapters cover EEG studies of schizophrenia affective disorders alcoholism mental retardation childhood psychiatric disorders and changes in CNS function caused by psychotropic drugs The various aspects of EEG pertinent to electroconvulsive therapy are also discussed including the role of a baseline EEG beneficial and adverse changes neurophysiologic mechanisms and the nature of the seizures themselves This book is intended for the neurologist dealing actively with psychiatric or mental disorders the electroencephalographer who is generally concerned with behavioral neurology or especially interested in various controversial EEG patterns and the psychiatrist interested in organicity in general or EEG in particular      **Health Psychophysiology** S. Suter, 2014-06-03 Most military researchers who have attempted to measure organizational commitment have done so on an ad hoc basis preferring to invent new items and scales rather than incorporate well established measures The purpose of this special issue is to reverse this trend by bringing military organizational commitment research into the scientific mainstream and to do so in ways that will prove useful to military services while advancing organizational commitment theory and knowledge This special issue grew out of a symposium conducted at the 1998 American Psychological Association Convention that arose when many in the field recognized the practical importance of measuring organizational commitment while maintaining a healthy concern for ensuring that this measurement was well grounded in organizational commitment theory Taken together the articles in this issue demonstrate the concepts of affective and continuance commitment and their underlying measures by using them in different military samples and under a variety operational conditions      *Indexes to the Epilepsy Accessions of the Epilepsy Information System* J. critical appraisal of the differentially specialized functions of left and right human cerebral hemispheres in verbal and visuospatial domains respectively formerly cerebral dominance in relation to individual variation due for example to gender and handedness Critical cross comparison of several methods of assessing hemispheric specialization such as perceptual behavioral clinical neurological electrophysiological and real time methods of assessment of cerebral orientation have been made Individual differences have been considered in relation to statistical concepts in the assessment of cerebral lateralization Some emphasis has been placed on the application of these methods and concepts to psychopathology

Simons, Marie Balaban, Robert Simons, 2013-04-15 Orienting is the gateway to attention the first step in processing stimulus information This volume examines these initial stages of information intake focusing on the sensory and motivational mechanisms that determine such phenomena as stimulus selection and inhibition habituation pre attentive processing and expectancy Psychophysiological methods are emphasized throughout The contributors consider analyses based on cardiovascular and electrodermal changes reflex reactions and neural events in the cortex and subcortex Stimulated by a conference lauding Frances Graham held before and during a recent meeting of the Society for Psychophysiological Research the book presents current theory and research by an international cadre of outstanding investigators A major researcher and theorist in the field of attention for more than three decades Dr Graham contributes an Afterword to the present volume which is both a consideration of the work which has gone before and a new original theory paper on preattentive processing and attention      **Research Grants Index** National Institutes of Health (U.S.). book is to describe the memory system of the brain taking into account all the levels of neural organization molecule cell small network and anatomical circuit This synthetic approach is necessary for determining the real mechanisms among the potential ones that is the neural bases of learning and memory in intact organisms functioning under normal conditions For this purpose data from molecular cellular and behavioral neurobiology neuropsychology animal and human psychology and neural modellization are comprehensively reviewed by leading specialists and brought together in an original synthesis

*Time, Action and Cognition* Françoise Macar,V. Pouthas,William J. Friedman,2013-04-17 This volume is the outcome of the NATO Advanced Research Workshop on Time Action and Cognition which was held in Saint Malo France in October 1991 The theme time in action and cognition of time was sparked by growing awareness in informal meetings between mostly French speaking time psychologists of the need to bring together time specialists in the areas of development motor behavior attention memory and representations The workshop was designed to be a forum where different theoretical points of view and a variety of empirical approaches could be presented and discussed Time psychologists tended to draw conclusions restricted to their specific fields of interest From our own experience we felt that addressing a common issue possible relationships between time in action and representations of time could lead to a more comprehensive approach We are indebted to NATO for allowing us to bring this idea to fruition We take this opportunity as well to express our thanks to Cognisciences Cognisud section an active interdisciplinary research organization for its financial backing and the CNRS for its scientific support

The Bereitschaftspotential Marjan Jahanshahi,Mark Hallett,2012-12-06 Kornhuber and Deecke first recorded and reported the Bereitschaftspotential in 1964 The aim of this book is to bring together in a single volume some of the important research on the Bereitschaftspotential and other movement related cortical potentials and to highlight and address some of the pertinent questions relating to the Bereitschaftspotential and to identify the key issues for future investigation in this field This book represents a unique compilation of information about the Bereitschaftspotential and related cortical potentials and techniques for measuring preparatory processes in the brain The book will be of interest to motor physiologists psychologists and neurologists working in clinical or research laboratories
