Ocular Circulation and Neovascularization D. Benezra, N. Ryan, B.M. Glaser, R.P. Murphy, 2012-12-06

Neovascularization is a normal phase of tissue repair mechanism In the eye however sprouting of new vessels within avascular tissues and their greater tendency to bleed have detrimental effects on vision Diabetic retinopathy corneal neovascularization age related macular degeneration retinal vein occlusion and retinopathy of prematurity are major causes of blindness In all uncontrolled proliferation of new vessels is the underlying pathological cause leading to the inexorable loss of vision Development of laser technologies and their wide use in ophthalmology have brought some hope for the treatment of these diseases However it became evident that direct closure of the new vessels and or ablation of large parts of the tissue are not ideal solutions to the problem Recent advances in molecular biology and genetic engineering have fostered basic knowledge regarding the growth factors and intercellular messengers and their association with the proliferation of new blood vessels These latter findings sparked a renewed interest in Michaelson s X factor of ocular neovascularization and opened avenues for possible innovative therapeutic approaches Therefore the suggestion to organize an international gathering of clinicians and scientists interested in problems of ocular circulation and neovascularization was received with great enthusiasm Unanimously it was decided to dedicate the symposium to Professor I C Michaelson the innovative scientist the great clinician the indefatigable teacher and above all the wonderful human being The meeting was highlighted by the outstanding atmosphere of friendship and scientific exchanges This book mirrors the information delivered and includes a selection of papers from the scientific program The organization of this meeting and the publication of the book would not have been possible without the harmonious team efforts made by the International Scientific and Local Committees I am thankful to the chairpersons of the various sessions for their time keen interest and endeavor for the realization of a high scientific level I also deeply acknowledge the help and support of Arnall Patz Bob Murphy Bert Glaser Robert Frank Larry Hjelmeland Gordon Klintworth Neville Welsh Charles Riva Alec Garner Desmond Archer Ephraim Friedman
