Teaching Children About Health A Multidisciplinary Approach:

Teaching Children about Health Estelle Weinstein, Efreem Rosen, 2003 TEACHING CHILDREN ABOUT HEALTH takes a case study approach and is written especially for the elementary classroom teacher. The goal of this text is to help teachers become more knowledgeable about and comfortable with health topics to be more reflective in their practice of teaching about health and better equipped with activities for incorporating health subjects into their curriculum. Each chapter considers health from a physical, social, and emotional perspective, acknowledging the mind-body connection. The authors include topics that are relevant in children's lives using a wellness preventive health model. In addition, each chapter provides activities that can be integrated into several disciplines found in most elementary school curricula. This text is meant to provide elementary school classroom teachers with the incentive and knowledge base they will need to include interdisciplinary lessons about the various health content areas in their daily teaching. It recognizes that since most elementary school programs do not have separate health education experiences for students and since these are the primary learning years, it is the responsibility of the classroom teacher to initiate learning about health. Pink,George W. Noblit,2008-09-03 It is evident that urban education has become the central focus of educators at the present time In the U S for example almost one third of all school age children attend schools in large urban school districts It is in these urban schools where the diversity of cultures and languages is highest and where student learning is most problematic What has emerged from recent work to improve urban schools is the insight that there is no one size fits all panacea Rather we have discovered that the local context shapes in critically important ways what will be effective at the school level The universality of the problematics with urban education together with the importance of understanding the local or situated context of improvement interventions brings into sharp focus the importance and timeliness of an undertaking like the International Handbook of Urban Education An important focus of the International Handbook of Urban Education will be the interrogation of both the social and political factors that lead to different problem posing and subsequent solutions within each region An important question to be answered for example is what it takes in terms of resources political will and policy actions to improve urban education **Educating Children with Autism** National Research Council,Division of Behavioral and Social Sciences and Education,Committee on Educational Interventions for Children with Autism,2001-11-11 Autism is a word most of us are familiar with But do we really know what it means Children with autism are challenged by the most essential human behaviors They have difficulty interacting with other people often failing to see people as people rather than simply objects in their environment They cannot easily communicate ideas and feelings have great trouble imagining what others think or feel and in some cases spend their lives speechless They frequently find it hard to make friends or even bond with family members Their behavior can seem bizarre Education is the primary form of treatment for this mysterious condition This means that we place important responsibilities on schools teachers and children s parents as well as the other professionals who work with children with autism With the passage of the Individuals with Disabilities Education Act of 1975 we accepted responsibility for educating children who face special challenges like autism While we have since amassed a substantial body of research researchers have not adequately communicated with one another and their findings have not been integrated into a proven curriculum *Educating Children with Autism* outlines an interdisciplinary approach to education for children with autism The committee explores what makes education effective for the child with autism and identifies specific characteristics of programs that work Recommendations

are offered for choosing educational content and strategies introducing interaction with other children and other key areas This book examines some fundamental issues including How children s specific diagnoses should affect educational assessment and planning How we can support the families of children with autism Features of effective instructional and comprehensive programs and strategies How we can better prepare teachers school staffs professionals and parents to educate children with autism What policies at the federal state and local levels will best ensure appropriate education examining strategies and resources needed to address the rights of children with autism to appropriate education Children with autism present educators with one of their most difficult challenges Through a comprehensive examination of the scientific knowledge underlying educational practices programs and strategies Educating Children with Autism presents valuable information for parents administrators advocates researchers and policy makers
