Tasks in Primary Mathematics Teacher Education Barbara Clarke, Barbro Grevholm, Richard Millman, 2008-11-17. *Tasks in Primary Mathematics Teacher Education* is intended to advance relevant research and innovative international practices in the preparation and professional development of mathematics teachers. Emerging from discussion at the ICMI study on teacher professional development, this volume focused on primary and elementary teachers. It culls a richness that can only be found by gathering wisdom from varied experiences around the world. The choice of tasks and the associated pedagogies is a key aspect of teaching and learning mathematics. Arguing that what students learn is largely defined by the tasks they are given, several major themes are presented. One such major strand, the form, function, and focus of tasks, is discussed throughout several chapters, offering analysis, discussion of implementation, and exemplars of a broader category of illustrative techniques for developing critical understanding.

Transforming Children's Mathematics Education Leslie P. Steffe, Terry Wood, 2013-11-05. Eminent scholars from around the globe gathered to discuss how educational systems would change if the prevailing principles of constructivism were applied to three major aspects of those systems: knowledge and learning, communication, and environment. This volume provides documentation of the proceedings of this important meeting. The Early Childhood Action Group of the Sixth International Congress on Mathematics Education. This international assembly, representing such diverse disciplines as mathematics and math education, epistemology, philosophy, cognitive science, psycholinguistics, and science education, is the first to examine early childhood mathematics education from

constructivist and international perspectives in addition to formulating recommendations for future work in the field
