Smoking Risk Perception And Policy:

Smoking Paul Slovic, 2001-05-23 This book presents a counter view based on a survey of several thousand young persons and adults probing attitudes beliefs feelings and perceptions of risk associated with smoking The authors agree that young smokers give little or no thought to health risks or the problems of addiction The survey data contradicts the model of informed rational choice and underscores the need for aggressive policies to counter tobacco firms marketing and promotional efforts and to restrict youth access to tobacco *The Smoking Puzzle* Frank A. Sloan, Vincent Kerry

Smith, Donald H. Taylor, 2003 The authors find that smokers tend to be overly optimistic about longevity and future health if they quit later in life Smokers over 50 revise their perceptions only after a major health shock If smokers are informed of long term consequences and are told that quitting can come too late they are able to evaluate the risks more accurately

Smoking W. Kip Viscusi, 1992 Are the risks of smoking exaggerated Has there been an open and rational discussion about the risks of smoking This book attempts to answer these and many other questions about the subject providing a detailed empirical presentation on smoking behavior as a risky consumer decision Using new empirical data based on several national and regional surveys Viscusi addresses a number of important issues including the sources of information that people have about the risks of smoking the accuracy of their perceptions of the risks associated with smoking and the consistency of smoking decisions with other risky behavior scrutinizing issues such as whether smokers value risk differently than those who wear safety belts Viscusi also looks at the differences in age groups and how they assess these risks based on public information He provides new insight into the degree to which individuals understand smoking risks and take these risks into account in their behavior With its detailed empirical data and its examination of individual decision making processes this work will interest researchers in public health public policy psychology and economics as well as anyone concerned with this important issue New Perspectives on Risk Communication Asa Boholm, 2013-12-16 That risk communication ranks high

on the policymaking agenda is beyond discussion today The field is a point of intersection of social communication practical management and policy making It covers such diverse activities as to inform and educate the public about risk and risk management in order to influence attitudes and behaviour to act in situations of emergency or crises to aid in decision making and to assist in conflict resolution Communication has grown into a major concern in current risk governance based on network co ordinated management of public affairs conducted by authorities and companies and is recognized as a key component in the government of risk This is especially salient in policy fields relating to environmental planning and resource management urban planning chemical and food regulation or infrastructure planning development and maintenance This book explores risk communication research with a focus on new theoretical perspectives research findings and applied goals It reflects on a broad range of innovative theoretical perspectives methodological approaches and empirical areas This book was published as a special issue of the Journal of Risk Research Consumer Perception of Product Risks and Benefits

Gerard Emilien, Rolf Weitkunat, Frank Lüdicke, 2017-03-14 This book reflects the current thinking and research on how consumers perception of product risks and benefits affects their behavior It provides the scientific regulatory and industrial research community with a conceptual and methodological reference point for studies on consumer behavior and marketing The contributions address various aspects of consumer psychology and behavior risk perception and communication marketing research strategies as well as consumer product regulation The book is divided into 4 parts Product risks

Perception of product risks and benefits Consumer behavior Regulation and responsibility **The Feeling of Risk** Paul

Slovic, 2013-03-07 The Feeling of Risk brings together the work of Paul Slovic one of the world's leading analysts of risk to describe the extension of risk perception research into the first decade of this new century In this collection of important works Paul Slovic explores the conception of risk as feelings and examines the interaction of feeling and cognition in the perception of risk He also examines the elements of knowledge cognitive skill and communication necessary for good decisions in the face of risk The first section of the book looks at the difficulty of understanding risk without an emotional component for example that disaster statistics lack emotion and thus fail to convey the true meaning of disasters and fail to motivate proper action to prevent them The book also highlights other important perspectives on risk arising from cultural worldviews and concerns about specific hazards pertaining to blood transfusion biotechnology prescription drugs smoking terrorism and nanotechnology Following on from The Perception of Risk 2000 this book presents some of the most significant research on risk perception in recent years providing essential lessons for all those involved in risk perception and communication **Clinical Textbook of Addictive Disorders** Richard J. Glynis M. Breakwell, 2014-09-15 Since the first edition of The Psychology of Risk there have been enormous macro economic and socio political changes globally the chaos in the world banking system and the financial crisis and recessions that it presaged the Arab Spring and the revolutionary shifts in power in the Middle East with rippled consequences around the world the development of ever more sophisticated cyber terrorism that can strike the private individual or the nation state with equal ease Amidst these changes in the face of hazard do the psychological models built to explain human reactions to risk still apply Has the research over the last few years resulted in an improvement in our understanding of how people perceive and act in relation to risk In this second edition Professor Dame Breakwell uses illustrations and current

However, there is a clear lack of uniformity in the style, aims, and methods applied. Consequently, the body of results is inconsistent, and it is difficult to isolate relevant patterns or interpretations. *Nuclear Waste Management, Nuclear Power, and Energy Choices: Public Preferences, Perceptions, and Trust* presents a theoretical base for public reactions, then classifies and reviews the large body of surveys carried out over the past decade. Particular focus is placed on residents within 50 miles of US nuclear waste facilities due to the disproportionate presence of nuclear factors in their lives, such as the legacy of nuclear waste disposal and job dependency. The motivations and reasons for their views, such as fear, attraction to the economic benefits, trust of site managers and federal agencies, cultural views, personal history, and demographic attributes of the people, are also considered to provide a balanced and detailed overview. *Nuclear Waste Management, Nuclear Power, and Energy Choices: Public Preferences, Perceptions, and Trust* includes a comprehensive treatment of the theories and literature, and most important, is grounded in surveys in 2005, 2008, 2009, 2010, and 2011, which includes questions considering the impact of Fukushima on US public opinion. By including real-life data alongside the analysis, *Nuclear Waste Management, Nuclear Power, and Energy Choices: Public Preferences, Perceptions, and Trust* provides a relevant and concise reference for nuclear industry professionals. It also acts as a resource for students and researchers studying nuclear-related topics, including political, social, and environmental factors. The Ethics of Public Health Paternalism T M Wilkinson, 2024-12-30 This is an open access title available under the terms of a CC BY NC ND 4.0 International licence It is free to read on the Oxford Academic platform and offered as a free PDF download from OUP and selected open access locations The Ethics of Public Health Paternalism is about policies that try to stop people damaging their own health From the point of view of public health advocates if people did not smoke or drank less alcohol or kept off junk food and sugary liquids they would tend to be healthier Hence such tactics as taxing tobacco restricting the sale of alcohol and limiting the density of fast food outlets Because these tactics appear to limit freedom of choice they are often pejoratively described as the actions of a nanny state that overvalues health and wrongly infringes on the autonomy of adults But many of us want to be healthy rather than ill and alive rather than dead Does a state really nanny us when it uses its power to make us healthier If it does should it stop Some public health policies might reduce inequities of health or save costs in medical treatment or correct market failures But as this book shows lots would not The best case for many public health interventions is paternalistic aiming to steer people away from making unhealthy choices against their own interests

But even though it is the best case it often fails. It overvalues health and undervalues autonomy. It exaggerates the influence of addiction and the marketing of unhealthy products. Except for smoking we do not have the evidence needed to show that unhealthy choices are so mistaken as to justify the interventions. Much of what modern public health does when it tries to stop adults damaging their health has not been justified. The Ethics of Public Health. Paternalism applies political and moral philosophy to the ideas of both supporters and critics of public health interventions. It uses philosophical analysis of the values of health and well being to explain what sort of evidence is needed to support public health interventions thus exposing a major gap in the arguments of public health advocates and it engages in detail with empirical evidence for instance about smokers regrets. *The Accuracy of the FTC Tar and Nicotine Cigarette Rating System* United States. Tobacco Industry and Smoking Fred C Pampel, Fred C. Pampel, 2009. Praise for the previous edition. *Golden Holocaust* Robert N. Proctor, 2012-02-28. The cigarette is the deadliest artifact in the history of human civilization. It is also one of the most beguiling thanks to more than a century of manipulation at the hands of tobacco industry chemists. In *Golden Holocaust* Robert N Proctor draws on reams of formerly secret industry documents to explore how the cigarette came to be the most widely used drug on the planet with six trillion sticks sold per year. He paints a harrowing picture of tobacco manufacturers conspiring to block the recognition of tobacco cancer hazards even as they ensnare legions of scientists and politicians in a web of denial. Proctor tells heretofore untold stories of fraud and subterfuge and he makes the strongest case to date for a simple yet ambitious remedy: a ban on the manufacture and sale of cigarettes.

Social and Behavioral Foundations of Public Health Jeannine Coreil, 2010. This book is intended as a core textbook for courses in public health that examines current issues in health from a social and behavioral science perspective. It is a cross disciplinary

course public health medical sociology health psychology medical anthropology and thus there are many ways to teach the course based on a particular instructor's perspective. The authors wrote the book because they were dissatisfied with the way other texts apply social science to public health and found that many texts being used were from related fields such as medicine nursing or general health. The authors are planning to do a major revision based on reviews they have collected and the reviews we have collected. We believe the revised edition will essentially be a new text based on rich feedback. They will include new theory new cases new research and a rich ancillary package. They will also reduce the frameworks presented to make the book more readable to students. **The SAGE Handbook of Social Marketing** Gerard Hastings, Kathryn Angus, Carol Bryant, 2011-11-15
