

STAR IN A JAR EXPERIMENT

SONOLUMINESCENCE

IG: FlatEarthAndMore

In 1989 an experimental advance was introduced which produced stable single-bubble sonoluminescence. In single-bubble sonoluminescence, a single bubble trapped in an acoustic standing wave emits a pulse of light with each compression of the bubble within the standing wave. The heat inside the Bubble was hot enough to melt steel. This proves that our stars are not balls of fire flouting in space, rather they're made of water inside our dome. furthermore when using a Nikon p900/p1000 you can clearly see this fact coming to fruition and you start to see that NASA lied to us.
