Computer-Based Mathematics Education and the Use of MatCos Software in Primary and Secondary Schools Costabile, Francesco Aldo,Altomare, Mariavittoria,Tricoli, Gianluca,2020-08-07 The theme of inserting new digital technologies into the teaching and learning of mathematics from primary and secondary schools has provoked a wide and interesting debate One such debate is the reformation of the foundations of mathematics to include computation what and how to calculate among the traditional themes Arithmetic Geometry etc of mathematics Thus the authors propose the MatCos Project as a new approach for solving this issue Computer Based Mathematics Education and the Use of MatCos Software in Primary and Secondary Schools is a critical reference source that proposes a new pedagogical learning paradigm that guides students in the formation of an active logical sequential intuitive and creative thinking that directs them towards problem solving and starts students with computational thinking and programming in a natural way The content of the book is divided into two parts with the first exploring theoretical and pedagogical notes on mathematics and the second examining the MatCos programming environment and its systematic inclusion in teaching practice Highlighting themes that include computer assisted instruction teaching learning sequences and programming this book is ideal for in service teachers mathematics instructors academicians researchers and students

Chance Encounters: Probability in Education R. Kapadia,M. Borovcnik,2012-12-06 This book has been written to fill a substantial gap in the current literature in mathematical education Throughout the world school mathematical curricula have incorporated probability and statistics as new topics There have been many research papers written on specific aspects of teaching presenting novel and unusual approaches to introducing ideas in the classroom however there has been no book giving an overview Here we have decided to focus on probability making reference to inferential statistics where appropriate we have deliberately avoided descriptive statistics as it is a separate area and would have made ideas less coherent and the book excessively long A general lead has been taken from the first book in this series written by the man who probably more than everyone else has established mathematical education as an academic discipline However in his exposition of didactical phenomenology Freudenthal does not analyze probability Thus in this book we show how probability is able to organize the world of chance and idealized chance phenomena based on its development and applications In preparing these chapters we and our co authors have reflected on

our own acquisition of probabilistic ideas analyzed textbooks and observed and reflected upon the learning processes involved when children and adults struggle to acquire the relevant concepts **Digest of Education Statistics 2006**
Thomas D. Snyder, Sally A. Dillow, Charlene M. Hoffman, 2007 **Education Statistics Quarterly**, 2000 *World Development Indicators [computer File]* World Bank, 2004 Annotation Chapters in this book focus on the people economy environment states and markets world view and global links for 148 countries As a whole these chapters present an expanded view of the world economy Introductions highlight recent research on major development issues worldwide
