Techniques For Project Appraisal Under Uncertainty:

Techniques for Project Appraisal Under Uncertainty Shlomo Reutlinger, 1970 The appraisal of events that have uncertain outcomes is discussed with particular reference to a feasible method for evaluating the riskiness of investment projects The essence of the uncertainty problem is that many of the variables affecting the outcome of a particular plan are outside of the planner's control Uncertainty which is relevant for most decisions is best characterized in terms of a decision agent's subjective beliefs about probabilities The probabilistic approach lends itself best to an appraisal of possible outcomes of a project that is affected by uncertainties from many sources Probability judgments about many basic variables and parameters affecting the final outcome can be aggregated into an estimate of the probability distribution of that final outcome This aggregation method is demonstrated for calculation of the economic returns of a project The method of approximation by a simulated sample is described and its application to probability distribution rates of returns from actual projects is explained The preparation of a mathematical model is detailed emphasizing the usefulness of computerized calculations Fourteen tables and nine figures are provided

The Emergence of Routines Daniel M. G. Raff, Philip Scranton, 2016-12-06 This book is a collection of essays about the emergence of routines and more generally about getting things organized in firms and in industries in early stages and in transition These are subjects of the greatest interest to students of entrepreneurship and organizations as well as to business historians but the academic literature is thin The chronological settings of the book's eleven substantive chapters are historical reaching as far back as the late 1800s right up to the 1990s but the issues they raise are evergreen and the historical perspective is exploited to advantage The chapters are organized in three broad groups examining the emergence of order and routines in initiatives studying the same subject in ongoing operations and a third focusing specifically on the phenomena of transition The topics range from the Book of the Month Club to industrial research at Alcoa from the evolution of procurement and coordination to project based industries such as bridge and dam building and the governance of defence contracting and from the development of project performance appraisal at the World Bank to the way the global automobile industry collectively redesigned the internal combustion engine to deal with after the advent of environmental regulation The chapters are vivid and thought provoking in themselves and for pedagogical purposes offer excellent jumping off points for discussion of relevant experiences and cognate academic literature
