Influence model has been developed based on the understanding from literature and conclusions from the interviews conducted. The proposed model highlights the different set of stakeholders involved in LSS projects and their role in the project. The model also helps categorizing the stakeholders based on the DMAIC phases. Research limitations: The paper is limited to ready made use in banking and financial service environments for LSS projects. However, the paper sets a platform for further research to customize the proposed model for other service industries. Practical implications: The model proposed as part of the paper helps project managers to inform, involve, and influence different set of stakeholders at different phases of the DMAIC flow. The model leaves an opportunity for further research and customization for other service industries outside the banking and financial services space like hospitality, government, health care, etc. Benefits and limitations of the model were presented as part of the paper. Originality/value: The paper is the original work contributed by the author. Both the survey findings and the model developed are author's original contribution for both academicians and corporate professionals.

Project management is truly an art seeking science with complex processes balancing project output objectives against restraints of time, budget, human resources, quality, and customer satisfaction. Achieving this balance requires skill, experience, and a host of supporting tools and techniques. *Project Management Theory and Practice*, Fourth Edition, explores the project delivery process through an examination of multiple strategies. Its core material reflects the traditional model approach to the life cycle; however, it also highlights common usage errors and reality gaps. This book describes the full life cycle of common processes and tools every project manager needs to understand. This fourth edition features a contemporary perspective on project management, explores future needs, and discusses new directions in the project management model. This textbook introduces new processes and aims to address known gaps in current methodologies and outlines logical future directions. Given the current success rates for projects, a serious project manager must be prepared to make significant changes to the existing toolset and related processes. This book aims to raise awareness of these needs and encourages examination of the shortcomings in current models. This textbook emphasizes that beyond the theoretical aspects of project planning and control, effective management is fundamentally a human activity. While processes and tools serve as supports for human decision making, they primarily help define the project's objectives and later aid decision makers in determining the execution plan. This textbook emphasizes how to transform a project vision into a format that is suitable for execution. It also emphasizes a life cycle perspective along with the essential mechanics needed to develop the projects. The book's case study examples have been
