Most, 2022-09-01 Studies on the Derveni Papyrus volume II brings together two new editions of the first fragmentarily extant columns of the Derveni Papyrus and seven scholarly articles devoted to their interpretation The Derveni Papyrus is by far the most important textual discovery of the 20th century regarding early Greek philosophy religion exegetical theory and practice linguistic ideas and a host of other areas and issues But the editorial and interpretative history of this extraordinary document has been very checkered While the interpretation of the better preserved later columns is still highly controversial in many regards at least the text of those columns has by and large found a scholarly consensus but the editorial and interpretative situation with the worse preserved first columns is quite different This volume offers not one but two editions of the first columns by Richard Janko and by Valeria Piano given that it is not currently possible to agree upon a single edition and it explains clearly and in detail the papyrological problems and doubts that lead to these two editions making it possible for readers even non papyrologists to form their own informed judgment about the most likely readings to be adopted Furthermore it contains a number of articles by leading scholars on the Derveni Papyrus above all offering original solutions to the question of the relation between the earlier and the later columns but also providing analysis and interpretation of other related problems In Synchrony with the Heavens, Volume 2 Instruments of Mass **Calculation** David King, 2005-06-01 This is the first investigation of one of the main interests of astronomy in Islamic civilization namely timekeeping by the sun and stars and the regulation of the astronomically defined times of Muslim prayer The study is based on over 500 medieval astronomical manuscripts first identified by the author now preserved in libraries all over the world and originally from the entire Islamic world from the Maghrib to Central Asia and the Yemen The materials presented provide new insights into the early development of the prayer ritual in Islam They also call into question the popular notion that religion could not inspire serious scientific activity Only one of the hundreds of astronomical tables discussed here was known in medieval Europe which is one reason why the entire corpus has remained unknown until the present A second volume also to be published by Brill deals with astronomical instruments for timekeeping and other computing devices The Rulership Book Rex E. Galen, De diebus decretoriis, from Greek into Arabic Glen M. Cooper, 2017-03-02 This volume presents the first edition of the Arabic translation by Hunayn ibn Ishaq of Galen's Critical Days De diebus decretoriis together with the first translation of the text into a modern language The substantial introduction contextualizes the treatise within the Greek and Arabic traditions Galen's Critical Days was a founding text of astrological medicine In febrile illnesses the critical days are the days on which an especially severe pattern of symptoms a crisis was likely to occur The crisis was thought to expel the disease producing substances from the body If its precise timing were known the physician could prepare the patient so that the crisis would be most beneficial After identifying the critical days based on empirical data and showing how to use them in therapy Galen explains the critical days via the moon s influence In the historical introduction Glen Cooper discusses the translation of the Critical Days in Arabic and adumbrates its possible significance in the intellectual debates and political rivalries among the 9th century Baghdad elite It is argued that Galen originally composed the Critical Days both to confound the Skeptics of his own day and to refute a purely mathematical rationalist approach to science These features made the text useful in the rivalries between Baghdad scholars Al Kindi d c 866 famously propounded a mathematical approach to science akin to the latter The scholar bureaucrat responsible for funding this translation Muhammad ibn Musa d 873 al Kindi s nemesis may have found the treatise useful in refuting that approach The commentary and notes to the facing page translation address issues of translation as well as important concepts Science and Civilisation in China: Volume 2, History of Scientific Thought Joseph Needham, Ling Wang, 1956-01-03 The second volume of Dr Joseph Needham's great work Science and Civilisation in China is devoted to the history of scientific thought Beginning with ancient times it describes the Confucian milieu in which arose the organic naturalism of the great Taoist school the scientific philosophy of the Mohists

Lindberg, Michael H.

Shank, 2013-10-07 This volume in the highly respected Cambridge History of Science series is devoted to the history of science in the Middle Ages from the North Atlantic to the Indus Valley Medieval science was once universally dismissed as non existent and sometimes it still is This volume reveals the diversity of goals contexts and accomplishments in the study of nature during the Middle Ages Organized by topic and culture its essays by distinguished scholars offer the most comprehensive and up to date history of medieval science currently available Intended to provide a balanced and inclusive treatment of the medieval world contributors consider scientific learning and advancement in the cultures associated with the Arabic Greek Latin and Hebrew languages Scientists historians and other curious readers will all gain a new appreciation for the study of nature during an era that is often misunderstood
