**Chymia** Henry Marshall Leicester, 1967      **Estonian Studies in the History and Philosophy of Science** Rein Vihalemm, 2012-12-06

The development of geography also forms an interesting chapter in the history of the University of Tartu and in that of Estonian science in general. On the one hand, geography is a natural science in the broader sense of the word; on the other hand, it is a study of human activity. This status of geography makes it particularly sensitive to the cultural and political circumstances under which scholarship and science have developed in Estonia. The article by Professor of Human Geography Ott Kurs, born 1939, and historian of science PhD in geography Erki Tamrniksaar, born 1969, in *Political Drafts Between Science and the Humanities: Geography at the University of Tartu Between the 17th and 20th Centuries* is devoted to this topic. Among other things, the article states that regular instruction in geography started at the University of Tartu in 1826 when the second chair of geography in Europe was established here. Although the present book does not contain any studies on philosophy at the Tartu University in the 19th century, I would still like to mention two names. In the early 19th century, Kant's philosophy was dominant at Tartu University. One of Kant's pupils, Gottlob Benjamin Jasche (1762-1839), who had worked under him as a Privatdozent in Königsberg, served as a professor here from 1802-1839. In the history of philosophy, he is primarily known as the publisher of Kant's *Logic*.

*A History of Chemistry* Ernst von Meyer, 2015-06-26

Excerpt from *A History of Chemistry: From Earliest Times to the Present Day*. Being Also an Introduction to the Study of the Science.

Nearly five decades have passed since Hermann Kopp's classical *Geschichte der Chemie*<sup>1</sup> began to appear, and it is now fifteen years since this was followed by the same indefatigable author's *Entwicklung der Chemie in der neueren Zeit*. The publication of these comprehensive works in conjunction with which Heifer's *Histoire de la Chimie* must be named, and the further descriptions of the growth of chemistry within particular periods given both by Kopp himself and by other writers, might lead one to suppose that there was no pressing need for further work in the same direction at the present time. This point, the author thinks, is best discussed by his making a few remarks here with respect to the aim and plan of the present volume. In this *History of Chemistry*, the attempt has been made to describe within short compass the development of

chemical knowledge and especially of the general doctrines of chemistry which have thus been gradually evolved from their earliest beginnings up to the present day About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

David M. Knight, 1992 Chemistry began as the occult science of alchemy in the 17th century it became a mechanical science and about 1800 it began to be understood as a fundamental science It was also seen as the experimental science par excellence as a useful science a classifying science and so on This account of the course of the development of chemistry illuminates both its intellectual and institutional history Among the author's many publications are *Norms and Elements* 1967 *The Nature of Science* 1977 *The Age of Science* 1986 and *A Companion to the Physical Sciences* 1989 [The Historical Background of Chemistry](#)

Roberts, 2005 This book provides an historical overview of the recent developments in the history of diverse fields within chemistry It follows on from *Recent Developments in the History of Chemistry* a volume published in 1985 Covering chiefly the last 20 years the primary aim of *Chemical History Reviews of the Recent Literature* is to familiarise newcomers to the history of chemistry with some of the more important developments in the field Starting with a general introduction and look at the early history of chemistry subsequent chapters go on to investigate the traditional areas of chemistry physical organic inorganic alongside analytical chemistry physical organic chemistry medical chemistry and biochemistry and instruments and apparatus Topics such as industrial chemistry and

**From Atoms to Molecules** Colin Archibald Russell, 2010 The focus of this volume by Colin Russell is the history of organic chemistry which arose improbably out of early speculations about the construction of chemical compounds and in particular their electrochemical nature The rise of electrochemistry and the work of Berzelius were critical in this regard and receive much attention in the first few chapters in this book Aspects of the contributions of Frankland fully explored elsewhere and those of Kekul and Hofmann are considered together with the miscellaneous functions of organic synthesis and the origins of conformational analysis Questions of chemical organisation are germane to the whole sequence of events and are briefly summarized before the whole last hundred years of organic chemistry are placed in historical perspective
