Studies In Animal And Human Behaviour Volume 1:

The American Development of Biology Ronald Rainger, Keith R. Benson, Jane Maienschein, 2016-11-11 Selected as one of the Best Sci Tech Books of 1988 by Library Journal The essays in this volume represent original work to celebrate the centenary of the American Society of Zoologists They illustrate the impressive nature of historical scholarship that has subsequently focused on the development of biology in the United States

Studies in Animal and Human Behaviour
Konrad Lorenz, 1970 *The Natural Science of the Human Species* Konrad Lorenz, 1997-08 This translation contains a synopsis of all the ideas that made Lorenz famous as the founder of ethology the study of comparative animal behavior edited from the author's posthumous works by Agnes von Cranach Here Am I Where Are You The Behavior of the Greylag Goose was thought to be Konrad Lorenz's last book However in 1991 the Russian Manuscript was discovered in an attic and its subsequent publication in German has become a scientific sensation Written under the most extreme conditions in Soviet prison camps the Russian Manuscript was the first outline of a large scale work on behavioral science This translation contains a synopsis of all the ideas that made Lorenz famous as the founder of ethology the study of comparative animal behavior

The Intelligent Imitator R. Kvadsheim, 1992-11-20 This monograph presents a novel conceptual framework for the study of human social behavior with potentially far reaching implications Owing to the role it accords to stored memory representations of observed occurrences examples of actions the proposed framework is referred to as the Exemplar Choice Theory or ECT The theory links perception and action and combines an expectancy value perspective on choice behavior with features of recent exemplar based approaches to the study of human information processing It addresses the influence of social models as well as the impact of past action consequences and differs from extant theories of instrumental learning The volume focuses on two extreme classes of conditions defined in terms of the actor's limited access to information and discusses available evidence from many areas of psychology Its structure is as follows the introductory chapter locates the proposed theory within a historical context this is followed by an overview of the main structure of the conceptual framework subsequently general propositions are presented and discussed in detail later empirical implications are derived for certain extreme classes of choice conditions and considered in the light of empirical evidence It is hoped the publication will inspire students and researchers of psychology biology zoology and of many social sciences including sociology anthropology decision research marketing economics cognitive science and mass media studies to undertake further research and to reconsider existing data and frameworks

Operant-Pavlovian Interactions Hank Davis, Harry M. B. Hurwitz, 2021-09-30 The first important distinction between operant and Pavlovian conditioning was made in 1928 by Polish scientists Konorski and Miller Unaware of their work Skinner proposed a similar analysis in 1935 of the manner in which operant and Pavlovian conditioning might differ and interact Konorski and Miller responded to Skinner's statement and by 1937 the now classic debate over two types of conditioned reflexes was in high gear In the years before publication the attention of many learning

theorists had returned to the fundamental question of whether there are identifiably different forms of learning The present volume originally published in 1977 contains chapters that reassess our basic learning paradigms of the time They deal with the definitional problems of isolating operant and Pavlovian conditioning as well as the attempt to analyze the inevitable interactions that follow These issues are examined in a variety of settings some authors deal with operant Pavlovian interactions directly by devising procedures to generate them others examine operant Pavlovian interactions by examining their possible contribution to established conditioning paradigms Dimensions of Behavior Leon Wurmser, Ellen McDaniel, 2013-10-22 Dimensions of Behavior The Psychiatric Foundations of Medicine provides the general background of the field and lays the foundations of the origins of behavior It is a modern textbook of psychiatry written specifically for medical students and physicians In its comprehensive scope it contains the contributions of all the disciplines that are relevant to the behavioral psychological social and humanistic aspects of medicine as well as the contributions of clinical psychiatry that constitute an integral part of the healing art and science of medicine The book is organized into six parts Parts I and II are introductory and present the historical development of psychological thinking in medicine and the evolving status of psychiatry in the contemporary scene with an emphasis on the need for a new medical model They further attempt to sketch a general conceptualization of human behavior that transcends the disciplinary boundaries of biological and psychosocial sciences through an introduction into the philosophical and epistemological approaches to studying man and his behavior Part III introduces basic concepts related to an evolutionary understanding of human behavior together with contributing extrapolations from ethological and laboratory animal studies Parts IV through VI present the developmental dimension of behavior Human development is discussed from the point of view of its biological foundations and genetic determinants from the point of view of the various psychological theories of personality development and in terms of the developmental stages of man This longitudinal perspective of behavior provides the fundamental considerations for understanding the uniqueness of the individual **Adaptive Behavior and Learning** J. E. R. Staddon, 1983-11-25 Adaptive behaviour is of two types only Either an animal comes equipped by heredity with the ability to identify situations in which a built in response is appropriate or it has mechanisms allowing it to adapt its behaviour in situations in which the correct response cannot be predicted Adaptive behaviour of the second type comes about through natural selection which weeds out individuals that identify situations inaccurately or respond inappropriately Adaptive behaviour of the second type comes about through the selection of behavioural variants by the environment This book is about the second type of adaptive behaviour of which learning is the most highly developed form Adaptive Behaviour and Learning constitutes a provocative theoretical integration of the psychological and biological approaches to adaptive behaviour John Staddon's ideas will have a major impact on psychologists and zoologists conceptions of the problem of learning Highly readable the book will serve as a useful text for courses in learning animal behaviour and comparative psychology **How Well Do Facts Travel?** Peter

Howlett, Mary S. Morgan, 2010-11-15 This book discusses how facts travel and when and why they sometimes travel well enough to acquire a life of their own Whether or not facts travel in this manner depends not only on their character and ability to play useful roles elsewhere but also on the labels packaging vehicles and company that take them across difficult terrains and over disciplinary boundaries These diverse stories of travelling facts ranging from architecture to nanotechnology and from romance fiction to climate science change the way we see the nature of facts Facts are far from the bland and rather boring but useful objects that scientists and humanists produce and fit together to make narratives arguments and evidence Rather their extraordinary abilities to travel well shows when how and why facts can be used to build further knowledge beyond and away from their sites of original production and intended use **A Natural History of**

Rape Randy Thornhill, Craig T. Palmer, 2001-02-23 A biologist and an anthropologist use evolutionary biology to explain the causes and inform the prevention of rape In this controversial book Randy Thornhill and Craig Palmer use evolutionary biology to explain the causes of rape and to recommend new approaches to its prevention According to Thornhill and Palmer evolved adaptation of some sort gives rise to rape the main evolutionary question is whether rape is an adaptation itself or a by product of other adaptations Regardless of the answer Thornhill and Palmer note rape circumvents a central feature of women s reproductive strategy mate choice This is a primary reason why rape is devastating to its victims especially young women Thornhill and Palmer address and claim to demolish scientifically many myths about rape bred by social science theory over the past twenty five years The popular contention that rapists are not motivated by sexual desire is they argue scientifically inaccurate Although they argue that rape is biological Thornhill and Palmer do not view it as inevitable Their recommendations for rape prevention include teaching young males not to rape punishing rape more severely and studying the effectiveness of chemical castration They also recommend that young women consider the biological causes of rape when making decisions about dress appearance and social activities Rape could cease to exist they argue only in a society knowledgeable about its evolutionary causes The book includes a useful summary of evolutionary theory and a comparison of evolutionary biology s and social science s explanations of human behavior The authors argue for the greater explanatory power and practical usefulness of evolutionary biology The book is sure to stir up discussion both on the specific topic of rape and on the larger issues of how we understand and influence human behavior **What is an Animal?** Tim

Ingold, 2016-04-29 This book offers a unique interdisciplinary challenge to assumptions about animals and animality deeply embedded in our own ways of thought and at the same time exposes highly sensitive and largely unexplored aspects of the understanding of our common humanity **The Study of Behavior** Jerry A. Hogan, 2017-11-02 Behavior studies now span a variety of sub disciplines including behavioral ecology neuroscience cognitive psychology and evolutionary developmental biology While the fields rapid growth has led to startling new insights into animal behavior it has brought increasingly fragmented approaches to the subject Integrating ideas and findings from a range of disciplines this book provides a common

framework for understanding diverse issues in behavior studies The framework is derived from classical ethology incorporating concepts and data from research in experimental psychology neurophysiology and evolutionary biology Hogan outlines the origin and development of major ideas and issues in the field drawing on examples throughout to highlight connections across sub disciplines Demonstrating how results in one area can directly inform work in others the book ultimately proposes concepts to facilitate new discussions that will open the way for improved dialog between researchers across behavior studies

The Role of Behavior in Evolution Henry C. Plotkin, 1988 These six original essays focus on a potentially important aspect of evolutionary biology the possible causal role of phenotypic behavior in evolution Balancing theory with actual or potential empiricism they provide the first full examination of this topic Plotkin's opening chapter outlines the conceptual minefields that the contributors attempt to negotiate What is an adequate theory of evolution What is behavior and is it possible to maintain a distinction between behavior and other attributes of the phenotype is all or only a special subset of behavior both a cause and a consequence of evolution And what do the theoretical issues mean in empirical terms He concludes that any attempt to understand the causal role of behavior in evolution requires a more complicated theoretical structure than that of orthodox neoDarwinism a conceptualization of behavior as a distinctive set of phenotypic attributes and the accumulation of more data David L Hull Northwestern University provides an alternative account of the evolutionary process by developing a hierarchy of replicators interactors lineages to replace the traditional one of genes organisms species Robert N Brandon Duke University also posits hierarchy as an appropriate architecture for the theoretical complexity needed to support an examination of the role of behavior in evolution F J Odling Smee Brunel University outlines a theoretical structure to encompass the behavior of phenotypes concentrating on the unrestricted definition of behavior everything that an animal does The remaining chapters are as much concerned with evidence as with theory Plotkin concentrates on a restricted definition of behavior behavior that is a product of choosing intelligence reviewing our empirical knowledge of how learning might influence evolution R I M Dunbar University College London uses empirical studies of vertebrate social behavior to deal with the question of how the social systems especially of primates might have a causal role in species evolution A Bradford Book

Jakob von Uexküll Carlo Brentari, 2015-02-18 The book is a comprehensive introduction to the work of the Estonian German biologist Jakob von Uexküll After a first introductory chapter by Morten Tønnessen and a second chapter on Uexküll's life and philosophical background it contains four chapters devoted to the analysis of his main works They are followed by a vast eighth chapter which deals with the influence Uexküll had on other philosophers and scientists Finally the author discloses his conclusions focused on the possibility of updating Uexküll's work As far as the key issue is concerned the Uexküllian Umwelt is the perceptive and operative world which surrounds animal species it is a subjective species specific construction which provides living organisms with great security and behaviour stability The relationship that the animal carries out with its environment is a complex system of semiotic interactions its

behaviour is not a set of mechanical reactions but a spontaneous attribution of meaning to the outside world Instinct, Environment and Behaviour (Psychology Revivals) Stephen Lea, 2015-03-27 What can the evolution of animal behaviour tell us about human behaviour More specifically how good an account of animal behaviour can we give in terms of evolution and how do humans fit in with or deviate from the pattern established for other animals The biological approach to the study of animal behaviour has important implications for psychology but it is distinctly different Originally published in 1984 this book provides a basic introduction to biological theories about behaviour from the classic ethological tradition of Lorenz and Tinbergen to the later sociobiological approach The principles of experimentation and research involved are assessed critically especially with regard to their implications for the study of human behaviour Written specifically for those with little biological knowledge this book will still be of interest to students of biology and introductory psychology alike Childhood and Youth Studies Paula Zwozdiak-Myers, 2007-07-27 This book introduces the inter disciplinary study of childhood and youth and the multi agency practice of professionals who serve the needs of children young people and their families Exploring key theories and central ideas research methodology policy and practice it takes a holistic contextual approach that values difference and diversity It examines concepts such as identity representation creativity and discourse and issues such as ethnicity gender and the childhood in crisis thesis Furthermore it challenges opinion by exploring complex and controversial modern day issues and by engaging with a range of perspectives to highlight debates within the field Humanism and Behaviorism Abraham Wandersman, Paul J. Poppen, David F. Ricks, 2016-06-06 Humanism and Behaviorism Dialogue and Growth explores issues in humanistic and behavioristic approaches to personality change It seeks to demonstrate the value of a dialogue between humanism and behaviorism clarify controversies between the two approaches evaluate the strengths and weaknesses of each approach and show the potential of syntheses between parts of each approach to develop new and useful integrations This book is comprised of 20 chapters and begins with an overview of the state of humanism and behaviorism and the controversies that have divided them along with the possible frameworks for combining the two The next section focuses on the person techniques of therapy and therapist control Behavior therapy as a humanitarian enterprise is considered Subsequent chapters assess the effectiveness of humanistic and behavioristic approaches to personality change and the compatibilities between them The theory of affective behaviorism and its application to effectively teach children with behavior problems to develop self control is described Self and personality are also discussed from humanistic and behavioristic viewpoints Finally some possible directions for the future of humanism and behaviorism are suggested This monograph should be useful to undergraduate and graduate students in clinical and personality psychology to those who intend to do research in and or practice psychotherapy and to academicians and professionals in psychology philosophy psychiatry social work and counseling Handbook of Research Methods in Social and Personality Psychology Harry T. Reis, Charles M. Judd, 2014-02-24 This indispensable sourcebook covers conceptual and practical issues in research design in

the field of social and personality psychology Key experts address specific methods and areas of research contributing to a comprehensive overview of contemporary practice This updated and expanded second edition offers current commentary on social and personality psychology reflecting the rapid development of this dynamic area of research over the past decade With the help of this up to date text both seasoned and beginning social psychologists will be able to explore the various tools and methods available to them in their research as they craft experiments and imagine new methodological possibilities

Spatial Cognition, Spatial Perception Francine L. Dolins, Robert W. Mitchell, 2010-03-25 An analysis of human and non human animals spatial cognitive perceptual and behavioural processes through mapping internal and external spatial knowledge Retrieving Liberalism from Rationalist Constructivism, Volume II Walter B. Weimer, 2022-05-07 This second volume Basics of a Liberal Psychological Social and Moral Order overviews developments in the theory of spontaneously ordered complex phenomena the psychology of inference and expectation the nature of anticipatory systems in the psychological and economic domains and the evolution of scientific thought and knowledge The book applies these insights to the nature of markets and morals what education should consist of and the problems of alienation and our existential malaise as we move into an increasingly abstract society In doing so it also shows the unscientific nature of the rationalist constructivist approach of progressivism and the disastrous consequences that would arise from following these positions The book shows the complex interplay between top down or directed structures what Hayek and others have called taxis organizations and far more complex orders of the social or psychological cosmos in which they are embedded as constituents It details how the key to the market orders of society depends upon their capacity to impersonally convey information to agents Markets can serve unknown and unforeseen ends for individuals who do not know or have contact with other market participants This is a vastly more powerful and productive system than anything that can arise in a tribal or face to face organization limited to personal contact such as the sort proposed by the constructivists The book will be of interest to academics and scholars in classical liberalism economics and political philosophy *Pretending and Imagination in Animals and Children* Robert W. Mitchell, 2002-02-21 It is well known that children s activities are full of pretending and imagination but it is less appreciated that animals can also show similar activities Originally published in 2002 this book focuses on comparing and contrasting children s and animals pretenses and imaginative activities In the text overviews of research present conflicting interpretations of children s understanding of the psychology of pretense and describe sociocultural factors which influence children s pretenses Studies of nonhuman primates provide examples of their pretenses and other simulative activities explore their representational and imaginative capacities and compare their skills with children Although the psychological requirements for pretending are controversial evidence presented in this volume suggests that great apes and even monkeys may share capacities for imagination with children and that children s early pretenses may be less psychological than they appear
