William Domhoff, 2022-10-04 A comprehensive neurocognitive theory of dreaming based on the theories methodologies and findings of cognitive neuroscience and the psychological sciences G William Domhoff's neurocognitive theory of dreaming is the only theory of dreaming that makes full use of the new neuroimaging findings on all forms of spontaneous thought and shows how well they explain the results of rigorous quantitative studies of dream content Domhoff identifies five separate issues neural substrates cognitive processes the psychological meaning of dream content evolutionarily adaptive functions and historically invented cultural uses and then

explores how they are intertwined He also discusses the degree to which there is symbolism in dreams the development of dreaming in children and the relative frequency of emotions in the dreams of children and adults During dreaming the neural substrates that support waking sensory input task oriented thinking and movement are relatively deactivated Domhoff presents the conditions that have to be fulfilled before dreaming can occur spontaneously He describes the specific cognitive processes supported by the neural substrate of dreaming and then looks at dream reports of research participants The why of dreaming he says may be the most counterintuitive outcome of empirical dream research Though the question is usually framed in terms of adaptation there is no positive evidence for an adaptive theory of dreaming Research by anthropologists historians and comparative religion scholars however suggests that dreaming has psychological and cultural uses with the most important of these found in religious ceremonies and healing practices Finally he offers suggestions for how future dream studies might take advantage of new technologies including smart phones

**The Sociological Interpretation of Dreams** Bernard Lahire, 2020-07-09 For Freud dreams were the royal road to the unconscious through the process of interpretation the manifest and sometimes bewildering content of dreams can be traced back to the unconscious representations underlying it But can we understand dreams in another way by considering how the unconscious is structured by our social experiences This is hypothesis that underlies this highly original book by Bernard Lahire who argues that dreams can be interpreted sociologically by seeing the dream as a nocturnal form of self to self communication Lahire rejects Freud's view that the manifest dream content is the result of a process of censorship as a form of self to self communication the dream is the symbolic arena most completely freed from all forms of censorship In Lahire's view the dream is a message which can be understood only by relating it to the social world of the dreamer and in particular to the problems that concern him or her during waking life As a form of self to self communication the dream is an intimate private diary providing us with the elements of a profound and subtle understanding of who and what we are Studying dreams enables us to discover our most deep seated and hidden preoccupations and to understand the thought processes that operate within us beyond the reach of our volition The study of dreams and dreaming has largely been the preserve of psychoanalysis psychology and neuroscience By showing how dreams are connected to the lived experience of individuals in the social world this highly original book puts dreams and dreaming at the heart of the social sciences It will be of great value to students and scholars in sociology psychology and psychoanalysis and to anyone interested in the nature and meaning of dreams

*Vision and Meaning in Ninth-Century Byzantium* Leslie Brubaker, 1999-02-25 The Byzantines used imagery to communicate a wide range of issues In the context of Iconoclasm the debate about the legitimacy of religious art conducted between c AD 730 and 843 Byzantine authors themselves claimed that visual images could express certain ideas better than words *Vision and Meaning in Ninth Century Byzantium* deals with how such visual communication worked and examines the types of messages that pictures could convey in the aftermath of Iconoclasm Its focus is on a deluxe manuscript commissioned around 880 a copy of the fourth century sermons of the Cappadocian church father Gregory of Nazianzus which presented to the Emperor Basil I founder of the Macedonian dynasty by one of the greatest scholars Byzantium ever produced the patriarch Photios The manuscript was lavishly decorated with gilded initials elaborate headpieces and a full

page miniature before each of Gregory's sermons. Forty-six of these, including over 200 distinct scenes, survive. Fewer than half, however, were directly inspired by the homily that they accompany. Instead, most function as commentaries on the ninth-century court and carefully deconstructed both provide us with information not available from preserved written sources and perhaps more important, show us how visual images communicate differently from words.

**Clinical Interaction and the Analysis of Meaning** Theo L. Dorpat, Michael L. Miller, 2013-05-13 Clinical Interaction and the Analysis of Meaning evinces a therapeutic vitality all too rare in works of theory. Rather than fleeing from the insights of other disciplines, Dorpat and Miller discover in recent research confirmation of the possibilities of psychoanalytic treatment. In Section I, Critique of Classical Theory, Dorpat proposes a radical revision of the notion of primary process consonant with contemporary cognitive science. Such a revised conception not only enlarges our understanding of the analytic process, it also provides analysis with a conceptual language that can articulate meaningful connections with a growing body of empirical research about the development and nature of human cognition. In Section II, Interactional Theory, Miller reverses the direction of inquiry. He begins with the literature on cognitive development and functioning and proceeds to mine it for concepts relevant to the clinical process. He shows how a revised understanding of the operation of cognition and affect can impart new meaning to basic clinical concepts such as resistance, transference, and level of psychopathology. In Section III, Applications and Exemplifications, Dorpat concludes this exemplary collaboration by exploring select topics from the standpoint of his and Miller's new psychoanalytic theory. At the heart of the authors' endeavor is meaning analysis, a concept that integrates an up-to-date model of human information processing with the traditional goals of psychoanalysis. The patient approaches the clinical encounter; they argue with cognitive affective schemas that are the accumulative product of his life experience; to date, the manifold meanings ascribed to the clinical interaction must be understood as the product of these schemas rather than as distortions deriving from unconscious drive-related fantasies. The therapist's goal is to make the patient's meaning-making conscious and thus available for introspection.

**Dreams and Dream Interpretation** Christian Roesler, 2025-06-30 Combining the latest neurological research and up-to-date psychoanalytic theory, *Dreams and Dream Interpretation: A Contemporary Introduction* gives readers a clear understanding of dreams, dream work, and the ever-changing interpretations of this extraordinary phenomenon. Throughout, he illustrates his ideas with solid case studies from his own work. Providing a comprehensive yet impartial perspective on the different theories of dream interpretation, the function of dreams, and their use as a tool to mine the depths of the unconscious, this book is a vital step in the development of psychoanalytic dream work.
