**Physics** P. Barut, 2012-12-06 Mathematical physics has become in recent years an independent and important branch of science It is being increasingly recognized that a better knowledge and a more effective channeling of modern mathematics is of great value in solving the problems of pure and applied sciences and in recognizing the general unifying principles in science Conversely mathematical developments are greatly influenced by new physical concepts and ideas In the last century there were very close links between mathematics and theoretical physics It must be taken as an encouraging sign that today after a long communication gap mathematicians and physicists have common interests and can talk to each other There is an unmistakable trend of rapprochement when both groups turn towards the common source of their science Nature To this end the meetings and conferences addressed to mathematicians and physicists and the publication of the studies collected in this Volume are based on lectures presented at the NATO Advanced Study Institute on Mathematical Physics held in
