## **Studies Of Supply And Demand In Higher Education:**

**Studies of Supply and Demand in Higher Education** Charles T. Clotfelter, Michael Rothschild, 2008-04-15 In the United States today there are some 3 400 separately governed colleges and universities amounting to a higher education industry with expenditures that constitute 2 8% of the gross national product Yet the economic issues affecting this industry have been paid relatively little attention In this collection of eight essays experts in economics and education bring economic analysis to bear on such underexamined topics as the nature of competition in higher education higher education s use of resources and who chooses to purchase what kind of education and why In higher education supply refers to such issues as government support for public colleges and universities the means by which graduate programs allocate financial support to students and the criteria that universities use for investing endowments Demand pertains to patterns of student enrollment and to the government business and individual market for the service and research activities of higher education Why are tuitions nearly the same among schools despite differences in prestige How are institutions with small endowments able to compete successfully with institutions that have huge endowments How are race and ethnicity reflected in enrollment trends Where do the best students go What choices among colleges do young people from low income backgrounds face This volume addresses these questions and suggests subjects for further study of the economics of higher education **Aid for Higher Education** United States. Supply and Demand in the Higher Education Market Amal Kumar, Michael Hurwitz, 2015 Higher education in the United States is a complex and multilayered system where open access community colleges coexist with highly selective 4 year institutions to which only a handful of students each year gain access Each institution plays a unique role in this marketplace and students across the spectrum engage with the system at different and often multiple levels Much of the national debate about postsecondary education in the United States in recent years has centered on the pervasive gaps in access to and success in higher education across racial ethnic socioeconomic or gender lines This discourse typically takes a narrow view focusing on one type of institution e g for profit colleges or one type of student e g low income first generation students Much of this popular narrative misses the forest for the trees failing to situate individual students contexts in the larger narrative of supply and demand in the higher education marketplace This research brief along with its companion brief aims for a wider lens by including the universe of postsecondary institutions in the United States and situating the racial ethnic gaps in college enrollment in the context of the changing American demographic This brief takes a data based approach to describing trends in college admission primarily focusing on how the changing face of the U S high school graduate has translated into the shifting demographic of the U S first time college student Data used in the following analyses come from the U S Department of Education s Integrated Postsecondary Education Data System IPEDS and the Private School Survey as well as from the Western Interstate Commission for Higher Education WICHE This brief unfolds in three parts First the authors briefly describe the high level trends in high school graduation and college enrollment paying special attention to the outcomes of different race ethnic groups They then disaggregate college enrollment by college institution level and examine how different racial ethnic groups interact with the system at different levels and finally briefly identify a few key trends in the migration patterns in higher education market A bibliography is included For the companion brief Supply and Demand in the Higher Education Market College Admission and College Choice see ED562849 *Economics of Higher Education*

Robert K. Toutkoushian, Michael B. Paulsen, 2016-03-18 This book examines the many ways in which economic concepts theories and models can be used to examine issues in higher education The topics explored in the book include how students make college going decisions the payoffs to students and society from going to college markets for higher education services demand and supply in markets for higher education why and how state and federal governments intervene in higher education markets college and university revenues and expenditures how institutions use net pricing strategies and non price product differentiation strategies to pursue their goals and to compete in higher education markets as well as issues related to faculty labor markets The book is written for both economists and non economists who study higher education issues and provides readers with background information and thorough explanations and illustrations of key economic concepts In addition to reviewing the contributions economists have made to the study of higher education it also examines recent research in each of the major topical areas The book is policy focused and each chapter analyses how contemporary higher education policies affect the behaviour of students faculty and or institutions of higher education Toutkoushian and Paulsen attempted a daunting task to write a book on the economics of higher education for non economists that is also useful to economists A book that could be used for reference and as a textbook for higher education classes in economics finance and policy They accomplish this tough balancing act with stunning success in a large volume that will serve as the go to place for anyone interested in the history and current thinking on the economics of higher education William E Becker Jr Professor Emeritus of Economics Indiana University     The Prospective Manpower Situation for Science and Engineering Staff in Universities and Colleges, 1965-75 National Science Foundation (U.S.), Thomas J.
