Tectonic Geomorphology of Mountains

William B. Bull, 2008-04-15 With a balance of theory and practical applications Tectonic Geomorphology of Mountains is essential reading for research geologists and upper level undergraduate and graduate students in the earth sciences This book describes how tectonic events influence geomorphic processes and explores how landscapes respond to tectonic deformation in the ways in which they are weathered washed and abraded Uses new approaches to enhance theoretical models of landscape evolution and to solve practical problems such as the assessment of earthquake hazards Includes previously unpublished research and theory Examines how to use key landforms as reference levels in changing landscapes estimate rates of mountain range uplift and map seismic shaking caused by prehistorical earthquakes Presents a diverse range of examples from around the world Geological Survey Research, Fiscal Year 1981 Geological Survey (U.S.), 1984

Geomorphology Robert S. Anderson, Suzanne P. Anderson, 2010-06-17 This textbook

provides a modern quantitative and process oriented approach to equip students with the tools to understand geomorphology Insight into the interpretation of landscapes is developed from basic principles and simple models and by stepping through the equations that capture the essence of the mechanics and chemistry of landscapes Boxed worked examples and real world applications bring the subject to life for students allowing them to apply the theory to their own experience The book covers cutting edge topics including the revolutionary cosmogenic nuclide dating methods and modeling highlights links to other Earth sciences through up to date summaries of current research and illustrates the importance of geomorphology in understanding environmental changes Setting up problems as a conservation of mass ice soil or heat this book arms students

with tools to fully explore processes understand landscapes and to participate in this rapidly evolving field Tsunamis and Earthquakes in Coastal Environments V. Santiago-Fandino,H. Tanaka,M. Spiske,2016-04-14 This monograph is a compilation of a number of research studies presented in fourteen chapters dealing with the impact and restoration of coastal environments that have been affected by earthquakes and tsunamis The focus is mainly on rivers estuaries coastal lagoons beaches and related ecosystems In addition to direct impact and response due to flooding and subsequent abrasion this publication covers physical chemical and biological responses in coastal morphology water quality and ecosystems and includes also topics dealing with risk reduction and vulnerability This compilation mainly covers examples from large magnitude earthquake and tsunami events in the Indian and Pacific Ocean that are complemented with other events in Latin America and the Iberian Peninsula Comprehensive descriptions of multi scale impacts of tsunami and earthquake events both spatially and temporally will help the reader to understand the complicated interactions which occur in coastal zones in order to create a sustainable resilient environment and achieve a society with smart post event recovery planning This book is aimed at researchers and students in coastal science and engineering as well as at policy makers environmental planners and coastal managers U.S. Geological Survey Bulletin Curtis E.
