1. Introduction

An entrepreneur has to function within limits of freedom and has to choose from limited opportunity. Key element of successful entrepreneurship is to make prudent choices from those available, and act upon the choices incrementally (not at one go) at various stages of development of the business, these choices are neither fully subject to environmental forces, nor to the absolute free will of the entrepreneur alone (Ray and Ramchandra, 1996).

Games and Play in the Theater of Spanish American Women Catherine Larson, 2004 In the seventeen dramatic texts examined in this study women writers from Spanish America have self consciously incorporated games into their plays structures to highlight from a woman s perspective the idea that life as well as the theatre is a game Some dramas are so overtly about games that the word appears significantly in their titles Others reflect game playing in less direct ways or connect metatheatrical examinations of role playing to the ludic In every drama examined however a game of some sort plays a key role in the construction of the playtext By looking at the nature and number of the games played in these women authored dramas from the past fifty years we can see the ways in which play is used to effect social control and the connections between play and aggression gender history and politics In these representative dramas the theatre serves as a vehicle for encouraging audiences to think about if not act upon the issues that have shaped Spanish America Games rules winners and losers join together as the playwrights explore events and times of fundamental importance in the countries historical and political evolutions

Out of the Garden Stephen Kline, 1993 This timely and innovative book provides a detailed history of marketing to children revealing the strategies that shape the design of toys and have a powerful impact on the way children play Stephen Kline looks at the history and development of children s play culture and toys from the teddy bear and Lego to the Barbie doll Care Bears and Teenage Mutant Ninja Turtles He profiles the rise of children s mass media books comics film and television and that of the specially stores such as Toys R Us revealing how the opportunity to reach large audiences of children through television was a pivotal

point in developing new approaches to advertising Contemporary youngsters he shows are catapulted into a fantastic and chaotic time space continuum of action toys thanks to the merchandisers interest in animated television Kline looks at the imagery and appeal of the toy commercials and at how they provide a host of stereotyped figures around which children can organize their imaginative experience He shows how the deregulation of advertising in the United States in the 1980s has led directly to the development of the new marketing strategies which use television series to saturate the market with promotional character toys Finally in a powerful re examination of the debates about the cultural effects of television Out of the Garden asks whether we should allow our children s play culture to be primarily defined and created by marketing strategies pointing to the unintended consequences of a situation in which images of real children have all but been eliminated from narratives about the young

Play and Exploration in Children and Animals Thomas G. Power,1999-11-01 Play is a paradox Why would the young of so many species the very animals at greatest risk for injury and predation devote so much time and energy to an activity that by definition has no immediate purpose This question has long puzzled students of animal behavior and has been the focus of considerable empirical investigation and debate In this first comprehensive and state of the art review of what we have learned from decades of research on exploration and play in children and animals Power examines the paradox from all angles Covering solitary activity as well as play with peers siblings and parents he considers the nature development and functions of play as well as the gender differences in early play patterns A major purpose is to

explore the relevance of the animal literature for understanding human behavior The nature and amount of children's play varies significantly across cultures so the author makes cross cultural comparisons wherever possible The scope is broad and the range multidisciplinary He draws on studies by developmental researchers in psychology and other fields ethologists anthropologists sociologists sociolinguists early childhood educators and pediatricians And he places research on play in the context of research on such related phenomena as prosocial behavior and aggression Finally Power points out directions for further inquiry and implications for those who work with young children and their parents Researchers and students will find *Play and Exploration in Children and Animals* an invaluable summary of controversies methods and findings practitioners and educators will find it an invaluable compendium of information relevant to their efforts to enrich play experiences

Play and Exploration in Children and Animals , Mathematical Enculturation Alan Bishop, 1991-06-30 Mathematics is in the unenviable position of being simultaneously one of the most important school subjects for today's children to study and one of the least well understood Its reputation is awe inspiring Everybody knows how important it is and everybody knows that they have to study it But few people feel comfortable with it so much so that it is socially quite acceptable in many countries to confess ignorance about it to brag about one's incompetence at doing it and even to claim that one is mathophobic So are teachers around the world being apparently legal sadists by inflicting mental pain on their charges Or is it that their pupils are all masochists enjoying the thrill of self inflicted mental torture More seriously do we really know what the reasons are for the mathematical activity which goes on in schools Do we really have confidence in our criteria for judging what's important and what isn't Do we really know what we should be doing These basic questions become even more important when considered in the context of two growing problem areas The first is a concern felt in many countries about the direction which mathematics education should take in the face of the increasing presence of computers and calculator related technology in society

General Technical Report NE ,1980 **Ritual** Catherine Bell, 2009-12-29 From handshakes and toasts to chant and genuflection ritual pervades our social interactions and religious practices Still few of us could identify all of our daily and festal ritual behaviors much less explain them to an outsider Similarly because of the variety of activities that qualify as ritual and their many contradictory yet in many ways equally legitimate interpretations ritual seems to elude any systematic historical and comparative scrutiny In this book Catherine Bell offers a practical introduction to ritual practice and its study she surveys the most influential theories of religion and ritual the major categories of ritual activity and the key debates that have shaped our understanding of ritualism Bell refuses to nail down ritual with any one definition or understanding Instead her purpose is to reveal how definitions emerge and evolve and to help us become more familiar with the interplay of tradition exigency and self expression that goes into constructing this complex social medium

Cultural Selection A. Fog, 2013-03-09 1 INTRODUCTION This book describes a new interdisciplinary theory for explaining cultural change In contrast to traditional evolutionist theories the present theory stresses the fact that a culture can evolve in

different directions depending on its life conditions Cultural selection theory explains why certain cultures or cultural elements spread possibly at the expense of other cultures or cultural elements which then disappear Cultural elements include social structure traditions religion rituals art norms morals ideologies ideas inventions knowledge technology etc This theory is inspired by Charles Darwin's idea of natural selection because cultural elements are seen as analogous to genes in the sense that they may be reproduced from generation to generation and they may undergo change A culture may evolve because certain cultural elements are more likely to spread and be reproduced than others analogously to a species evolving because individuals possessing certain traits are more fit than others to reproduce and transmit these traits to their offspring
