MAK,Albert Ting-pat SO,2011-03-01 This book is organized into three sections from exploring the major theories of scientific research in Feng Shui including from School Approach and Compass School Approach to providing case studied in Feng Shui applications for the built environment Microbiomes of the Built Environment National Academies of Sciences, Engineering, and Medicine,National Academy of Engineering,Division on Engineering and Physical Sciences,Health and Medicine Division,Division on Earth and Life Studies,Board on Infrastructure and the Constructed Environment,Board on Environmental Studies and Toxicology,Board on Life Sciences,Committee on Microbiomes of the Built Environment: From Research to Application,2017-10-06 People s desire to understand the environments in which they live is a natural one People spend most of their time in spaces and structures designed built and managed by humans and it is estimated that people in developed countries now spend 90 percent of their lives indoors As people move from homes to workplaces traveling in cars and on transit systems microorganisms are continually with and around them The human associated microbes that are shed along with the human behaviors that affect their transport and

removal make significant contributions to the diversity of the indoor microbiome. The characteristics of healthy indoor environments cannot yet be defined nor do microbial clinical and building researchers yet understand how to modify features of indoor environments such as building ventilation systems and the chemistry of building materials in ways that would have predictable impacts on microbial communities to promote health and prevent disease. The factors that affect the environments within buildings, the ways in which building characteristics influence the composition and function of indoor microbial communities, and the ways in which these microbial communities relate to human health and well-being are extraordinarily complex and can be explored only as a dynamic interconnected ecosystem by engaging the fields of microbial biology and ecology, chemistry, building science, and human physiology. This report reviews what is known about the intersection of these disciplines and how new tools may facilitate advances in understanding the ecosystem of built environments, indoor microbiomes, and effects on human health and well-being. It offers a research agenda to generate the information needed so that stakeholders with an interest in understanding the impacts of built environments will be able to make more informed decisions.

Inventing the Built Environment Juliana Yat Shun Kei, 2024-06-28. Why and how was the term built environment first introduced? Inventing the Built Environment retrieves the origin of this ubiquitous term. The articulation of the built environment, Kei demonstrates, coincided with the redefinition of education, research, and professional practices in architecture and town planning in 1960s Britain. Concentrating on the half-decade during which the term permeated the architectural and planning professions, this book recalls a time when the built environment was conceived as a part of the British government's effort in national economic planning. Inventing the Built Environment unpacks the proposal for a Research Council for the Built Environment to mobilise architecture and town planning for political economy. How a relatively small group of architects, planners, politicians, and researchers transposed scientific thoughts from biology, economics, and computation into the built environment will be considered too. Kei highlights the assumptions about and classification of the population that were made when inventing the built environment. The architectural and biosocial

implications of the making and remaking of this architectural environmental notion in Britain and beyond will be revealed through the works of pre eminent architect planners including Richard Llewelyn Davies and William Holford At a time when environmental concerns again take the front seat of architectural and planning debates this book offers for scholars and students an alternative lens to reflect on the assumptions and bias that can be embedded in our architectural lexicons
