Stuff Ivan Amato, 1997-04-17 Much more than a history of the material sciences Stuff brims with interviews with cutting edge experts in the field many of whom are building new materials literally atom by atom and describes such astounding achievements as artificial diamonds created from peanut butter and how nanotechnologists are building new age state of the art machines no thicker than a few hundred atoms **Stuff Matters** Mark Miodownik, 2014 An eye opening adventure deep inside the everyday materials that surround us from concrete and steel to denim and chocolate packed with surprising stories and fascinating science **Transformations Selected Works of G.B. Olson on Materials, Microstructure, and Design** C.E. Campbell, M.V. Manuel, W. Xiong, 2017-10-01 ASM International and The Minerals Metals and Materials Society TMS have collaborated to present a collection of the selected works of Dr Greg B Olson in honor of his 70th birthday in 2017 This collection highlights his influential contributions to the understanding of martensite transformations and the development and application of a systems design approach to materials Part I Martensite with an Introduction by Sir Harry Bhadeshia emphasizes Dr Olson's work to develop a dislocation theory for martensite transformations to improve the understanding of the statistical nature of martensite nucleation and to expand use of quantitative microscopy to characterize phase transformations Part II Materials Design with an Introduction by Dr Charles Kuehmann focuses on the application of a systems design approach to materials and the development of integrated computational design curriculum for undergraduate education Part II includes several examples of the systems design approach to a variety of applications The papers chosen for this collection were selected by the editors with input from Dr Olson *Material World* Ed Conway, 2025-06-10 THE NEW YORK TIMES BOOK REVIEW EDITORS CHOICE AN ECONOMIST BEST BOOK OF THE YEAR Finalist for the Financial Times and Schroders Business Book of the Year Award Sand salt iron copper oil and lithium These fundamental materials have created empires razed civilizations and fed our ingenuity and our greed for thousands of years Without them our modern world would not exist and the battle to control them will determine our future The fiber optic cables that weave the World Wide Web the copper veins of our electric grid the silicon chips and lithium batteries that power our phones and cars though it can feel like we now live in a weightless world of information what Ed Conway calls the ethereal world our twenty first century lives are still very much rooted in the material In fact we dug more stuff out of the earth in 2017 than in all of human history before 1950 For every ton of fossil fuels we extract six tons of other materials from sand to stone to wood to metal And in *Material World* Conway embarks on an epic journey across continents cultures and epochs to reveal the underpinnings of modern life on Earth traveling from the sweltering depths of the deepest mine in Europe to spotless silicon chip factories in Taiwan to the eerie green pools where lithium originates *Material World* is a celebration of the humans and the human networks the miraculous processes and the little known companies that combine to turn raw materials into things of wonder This is the story of human civilization from an entirely new perspective the ground up MATERIALS SCIENCE AND
