*The Hot-blooded Dinosaurs* Adrian Desmond, 1990-01-01 *The Paleobiological Revolution* David Sepkoski, Michael Ruse, 2015-03-04 The Paleobiological Revolution chronicles the incredible ascendance of the once maligned science of paleontology to the vanguard of a field With the establishment of the modern synthesis in the 1940s and the pioneering work of George Gaylord Simpson Ernst Mayr and Theodosius Dobzhansky as well as the subsequent efforts of Stephen Jay Gould David Raup and James Valentine paleontology became embedded in biology and emerged as paleobiology a first rate discipline central to evolutionary studies Pairing contributions from some of the leading actors of the transformation with overviews from historians and philosophers of science the essays here capture the excitement of the seismic changes in the discipline In so doing David Sepkoski and Michael Ruse harness the energy of the past to call for further study of the conceptual development of modern paleobiology

**Hierarchical Genome And Differentiation Waves, The: Novel Unification Of Development, Genetics And Evolution (In 2 Volumes)** Richard Gordon, 1999-07-12 Over the past few decades numerous scientists have called for a unification of the fields of embryo development genetics and evolution Each field has glaring holes in its ability to explain the fundamental phenomena of life In this book the author shows how the phenomenon of cell differentiation considered in its temporal and spatial aspects during embryogenesis provides a starting

point for a unified theory of multicellular organisms plants fungi and animals including their evolution and genetics This unification is based on the recent discovery of differentiation waves by the author and his colleagues described in the appendices and illustrated by a flip movie prepared by a medical artist To help the reader through the many fields covered a glossary is included This book will be of great value to the researcher and practicing doctors scientists alike The research students will receive an in depth tutorial on the topics covered The seasoned researcher will appreciate the applications and the gold mine of other possibilities for novel research topics

*The Disunity of Science* Peter Louis Galison, David J. Stump, 1996 Is science unified or disunified Over the last century the question has raised the interest and hackles of scientists philosophers historians and sociologists of science for at stake is how science and society fit together Recent years have seen a turn largely against the rhetoric of unity ranging from the plea of condensed matter physicists for disciplinary autonomy all the way to discussions in the humanities and social sciences that involve local history feminism multiculturalism postmodernism scientific relativism and realism and social constructivism Many of these varied aspects of the debate over the disunity of science are reflected in this volume which brings together a number of scholars studying science who otherwise have had little to say to each other feminist theorists philosophers of science sociologists of science How does the context of discovery shape knowledge What are the philosophical consequences of a disunified science Does for example an antirealism a realism or an arealism become defensible within a picture of local scientific knowledge What politics lies behind and follows from a picture of the world of science more like a quilt than a pyramid Who gains and loses if representation of science has standards that vary from place to place field to field and practitioner to practitioner

Darwinism as Religion Michael Ruse, 2017 Darwinism as Religion argues that the theory of evolution given by Charles Darwin in the 19th century has always functioned as much as a secular form of religion as anything purely scientific Through the words of novelists and poets Michael Ruse argues that Darwin took us from the secure world of Christian faith into a darker less friendly world of chance and lack of meaning

**Primordial Germ Cells in the Chordates** Peter D. Nieuwkoop, Lien A. Sutasurya, 1979-09-13

General Nematology A. Maggenti, 2012-12-06 This text is an overall view of nematology because I believe the science should be treated as a unified discipline The differences in the biological habits of nematodes do not justify the separation of plant nematologists and animal nematologists since the separation is not a reflection of any differences inherent to nematodes Therefore the book is

arranged with a format that in the beginning chapters illustrates the similarities and sequence of development of morphological characters among nematodes regardless of their biological habits. The later chapters illustrate the integration of the evolutionary development of the parasitic habit from related free living forms. Nematology is probably the last major discipline to establish its independence from the parent science of zoology. This natural evolution of nematology has occurred because of the overwhelming accumulation of sophisticated information and research that reflects the unique relationships of nematodes to other forms of plant and animal life as well as their relationships in other facets of the environment. Nematodes are invertebrate animals that like insects are unusual in their great numbers and varieties, their small size generally microscopic, their high degree of internal organization and their virtually ubiquitous distribution. They occupy almost every ecological niche, often causing disease of humans, other animals and plants. These activities often result in debility, death or in the impairment and loss of food supply with consequent loss to producers and consumers.

Conservation Science and Advocacy for a Planet in Peril Dominick A. DellaSala, 2021-08-18. Conservation Science and Advocacy for a Planet in Peril: Speaking Truth to Power helps equip scientists working on environmental and sustainability challenges with new tactics for success. Global efforts and cooperation by member states of environmental conventions have steadily increased but lack efficient and scalable mechanisms of translating conservation science to policy. The gap between science and policy is growing and very little time remains before the climate change and biodiversity losses trigger widespread disruptions of the planet's life support systems. This book covers these important topics providing a must read for environmental and conservation scientists, climate change activists, students, social scientists, economic professionals, sustainable businesses and policymakers. Provides an unprecedented collection of local, regional and national case studies from scientists and practitioners engaged in outreach to decision makers and the public. Covers personal accounts that bring science into policymaking providing usable guidelines for those working to bridge this gap. Includes the requisite information needed for effective communications and campaign strategies by sharing lessons learned. Reader's Guide to the History of Science Arne Hessenbruch, 2000. First Published in 2001. Routledge is an imprint of Taylor & Francis, an informa company.

**The Earth Encompassed** Peter J. Bowler, 2000. An accessible and comprehensive history of discoveries and outlooks that culminated in the modern discipline of environmental studies. **The Armored Dinosaurs** Kenneth Carpenter, 2001. Brings together the latest studies by an international group of dinosaur palaeontologists and provides descriptions of the original specimens of *Hyaleosaurus* and *Stegosaurus*. Prehistoric Monsters Allen A. Debus, 2014-11-21. Over centuries, discoveries of fossil bones spawned legends of monsters such as giants and dragons. As the field of earth sciences matured during the 19th century, early fossilists gained understanding of prehistoric creatures such as *Tyrannosaurus*, *Triceratops* and *Stegosaurus*. This historical study examines how these genuine beasts morphed in the public imagination into mythical, powerful engines of destruction and harbingers of cataclysm, taking their place in popular culture, film and literature as

symbols of lost worlds where time stands still      **Nature's Museums** Carla Yanni, 2005-09-09 Yanni art history Rutgers U examines the relationship between architecture and science in the 19th century by considering the physical placement and display of natural artifacts in Victorian natural history museums She begins by discussing the problem of classification the social history of collecting as well as architectural competitions and      **The Dinosaur Films of Ray Harryhausen** Roy P. Webber, 2004 Ray Harryhausens animated creatures sparkled with predatory alertness and subtle quirks of behavior that stamped each with a distinct and memorable personality His use of stop motion animation a method of animating movable models and puppets brought dinosaurs and monsters to life on the silver screen Many animators and special effects wizards like Phil Tippett of Jurassic Park and Jim Aupperle of Planet of Dinosaurs who are still working on prehistoric based films openly credit Ray Harryhausen as having influenced their careers His films are famous for being among the very best of the genre The first chapter of this book chronicles Harryhausens formative years and work on numerous 16mm experiments beginning with his viewing of King Kong in 1933 The next four chapters cover his four feature length dinosaur films The Beast from 20 000 Fathoms The Animal World One Million Years B C and The Valley of Gwangi These chapters provide extensive information about all aspects of the staging of their stop motion content and many additional facets of the overall production process The paleontological accuracy of his saurians from a modern perspective is also examined A chapter on his work and experiences in the 1970s and beyond discusses potential dinosaur projects as well as The Golden Voyage of Sinbad which is not a saurian film but does include the bat winged homunculus An appendix covers a number of dinosaur related films that Harryhausen had a hand in
