The Human Revolution Behavioural And Biological Perspectives On The Origins Of Modern Humans

Berys Gaut, Matthew Kieran

The Human Revolution Behavioural And Biological Perspectives On The Origins Of Modern Humans:

The Human Revolution Paul Mellars, Chris Stringer, 1989 This major interdisciplinary work developed from an international conference held at Cambridge University in 1987 Fifty five of the world's leading authorities from the fields of anthropology archaeology human evolution and genetics met for the first time to discuss all aspects of the biological and behavioural origins of modern human populations The volume brings together their papers revised and updated in the light of discussion at the conference itself The book features the results of new work by geneticists working on mitochondrial DNA globin polymorphisms and a Y chromosome DNA phylogeny and there are general reviews of the genetic evidence for the evolution of modern humans Other topics covered include palaeoecological models of human origins sophisticated modeling of population expansions and replacements changes in technology subsistence and social patterns and the origins of human language and other unique aspects of human behaviour This is the only book which integrates the remarkable new genetic evidence with the more conventional approaches of archaeologists and anthropologists No other work provides such an exhaustive and wide ranging account of modern human origins on a world wide scale

Rethinking the Human Revolution Paul Mellars, 2007 Arising from a conference Rethinking the Human Revolution reconsiders all of the central issues in modern human behavioural cognitive biological and demographic origins in the light of new information and new theoretical perspectives which have emerged over the past twenty years of intensive research in this field The 34 papers cover topics ranging from the DNA and skeletal evidence for modern human origins in Africa through the archaeological evidence for the emergence of distinctively modern patterns of human behaviour and cognition to the various lines of evidence for the geographical dispersal patterns of biologically and behaviourally modern populations from their African origins throughout Asia Australasia and Europe over the past 60 000 years

Origins of Anatomically Modern Humans Doris V. Nitecki, Matthew H. Nitecki, 2013-11-11 This volume is based on the Field Museum of Natural History Spring Systematics Symposium held in Chicago on May 11 1991 The financial support of Ray and Jean Auel and of the Field Museum is gratefully acknowledged When we teach or write we present only those elements that support our arguments We avoid all weak points of our debate and all the uncertainties of our models Thus we offer hypotheses as facts Multiauthored books like ours which simultaneously advocate and question diverse views avoid the pitfalls and lessen the impact of indoctrination In this volume we analyze the anthropological and biological disagreements and the positions taken on the origins of modern humans point out difficulties with the interpretations and suggest that the concept of the human origin can be explained only when we first attempt to define *Homo sapiens sapiens* One of the major controversies in physical anthropology concerns the geographic origin of anatomically modern humans It is undisputed due to the extensive research of the Leakeys and their colleagues that the family Hominidae originated in Africa but the geographic origin of *Homo sapiens sapiens* is less concretely accepted Two schools of thought exist on this topic

The Origins of Modern Humans Fred H. Smith, James C.

Ahern,2013-07-09 This update to the award winning *The Origins of Modern Humans A World Survey of the Fossil Evidence* covers the most accepted common theories concerning the emergence of modern Homo sapiens adding fresh insight from top young scholars on the key new discoveries of the past 25 years *The Origins of Modern Humans Biology Reconsidered* allows field leaders to discuss and assess the assemblage of hominid fossil material in each region of the world during the Pleistocene epoch It features new fossil and molecular evidence such as the evolutionary inferences drawn from assessments of modern humans and large segments of the Neandertal genome It also addresses the impact of digital imagery and the more sophisticated morphometrics that have entered the analytical fray since 1984 Beginning with a thoughtful introduction by the authors on modern human origins the book offers such insightful chapter contributions as Africa The Cradle of Modern People Crossroads of the Old World Late Hominin Evolution in Western Asia A River Runs through It Modern Human Origins in East Asia Perspectives on the Origins of Modern Australians Modern Human Origins in Central Europe The Makers of the Early Upper Paleolithic in Western Eurasia Neandertal Craniofacial Growth and Development and Its Relevance for Modern Human Origins Energetics and the Origin of Modern Humans Understanding Human Cranial Variation in Light of Modern Human Origins The Relevance of Archaic Genomes to Modern Human Origins The Process of Modern Human Origins The Evolutionary and Demographic Changes Giving Rise to Modern Humans The Paleobiology of Modern Human Emergence Elegant and thought provoking *The Origins of Modern Humans Biology Reconsidered* is an ideal read for students grad students and professionals in human evolution and paleoanthropology **The Origins of Human Behaviour** Robert Foley,2003-09-02 This volume explores the diverse ways in which the evolution of human behaviour can be investigated and confronts the most challenging aspects of the subject **The Oxford Handbook of African Archaeology** Peter Mitchell,Paul Lane,2013-07-04 This Handbook provides a comprehensive synthesis of African archaeology covering the entirety of the continent s past from the beginnings of human evolution to the archaeological legacy of European colonialism It includes a mixture of key methodological and theoretical issues and debates and situates the subject s contemporary practice *The Origin of Modern Humans and the Impact of Chronometric Dating* Martin Jim Aitken,Chris B. Stringer,Paul A. Mellars,2014-07-14 This volume of papers delivered to The Royal Society in February of 1992 explores the debate over the single center hypothesis of human origins versus multi regional evolution Over the last five years there has been growing support for a recent Out of Africa origin of modern humans based on fresh interpretations of the palaeoanthropological and archaeological evidence new applications of physical dating techniques to important sites and a greatly increased genetic data base on recent human variation and its geographical patterning But there has also been a parallel growth of doubts about interpretations of the new evidence from some workers This book provides a review of recent progress and allows some of these doubts to be aired and discussed In addition to the editors the contributors are O Bar Yosef A M Bowcock P Brown H J Deacon L L Cavalli Sforza J D Clark R Gr n J J Hublin A A Lin G H Miller J L Mountain H P Schwarcz N J

Creativity and Philosophy Berys Gaut,Matthew Kieran,2018-02-21 Creativity matters We want people to be more creative and admire those who are Yet creativity is deeply puzzling Just what is it to be creative Why is it valuable Who or what can be creative and how Creativity and Philosophy is an outstanding collection of specially commissioned chapters by leading philosophers who explore these problems and many more It provides a comprehensive and creative picture of creativity including the following themes creativity as a virtue imagination epistemic virtue moral virtue and personal vice creativity with and without value the definition of creativity creative failures and suffering creativity in nature divine creativity and human agency naturalistic explanations of creativity and the extended mind creativity in philosophy mathematics and logic and the role of heuristics creativity in art morality and politics individual and group creativity A major feature of the collection is that it explores creativity not only from the perspective of art and aesthetics but also from a variety of philosophical disciplines including epistemology philosophy of mind philosophical psychology philosophy of science political philosophy and ethics The volume is essential reading for anyone fascinated by creativity whether their interests lie in philosophy music art and visual studies literature psychology neuroscience management or education or they are simply intent on learning more about this vital human trait

From Big Bang to Big Mystery Brendan M. Purcell,2012 Everyone knows about the mystery of the Big Bang what started it This book is about the other creation mystery where did human beings in particular come from It traces the material part of our origins from the Big Bang through evolution including the almost 7 million year hominid sequence up to the first humans in Africa over 150 000 years ago That data doesn't seem to explain what paleontologists and archaeologists call the Big Bang of Human Consciousness In his fascinating accessible and thorough study renowned priest and academic Brendan Purcell shows the complementarity that scientists theologians and philosophers bring to a deeper understanding of the mystery of human existence and human consciousness

[Encyclopedia of Quaternary Science](#) Cary Mock,2013-03-25 The second revised edition of the Encyclopedia of Quaternary Science Four Volume Set provides both students and professionals with an up to date reference work on this important and highly varied area of research There are lots of new articles and many of the articles that appeared in the first edition have been updated to reflect advances in knowledge since 2006 when the original articles were written The second edition will contain about 375 articles written by leading experts around the world This major reference work is richly illustrated with more than 3 000 illustrations most of them in colour Research in the Quaternary sciences has advanced greatly in the last 10 years especially since topics like

global climate change geologic hazards and soil erosion were put high on the political agenda This second edition builds upon its award winning predecessor to provide the reader assured quality along with essential updated coverage Contains 357 broad ranging articles 4310 pages written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource for information in the field Facilitates teaching and learning The first edition was regarded by many as the most significant single overview of Quaternary science ever yet Editor in Chief Scott Elias has managed to surpass that in this second edition by securing even more expert reviews whilst retaining his renowned editorial consistency that enables readers to navigate seamlessly from one unfamiliar topic to the next

Modern Humans John F. Hoffecker, 2017-10-31 Modern Humans is a vivid account of the most recent and perhaps the most important phase of human evolution the appearance of anatomically modern people Homo sapiens in Africa less than half a million years ago and their later spread throughout the world Leaving no stone unturned John F Hoffecker demonstrates that Homo sapiens represents a major transition in the evolution of living systems in terms of fundamental changes in the role of non genetic information Modern Humans synthesizes recent findings from genetics including the rapidly growing body of ancient DNA the human fossil record and archaeology relating to the African origin and global dispersal of anatomically modern people Hoffecker places humans in the broad context of the evolution of life emphasizing the critical role of genetic and non genetic forms of information in living systems as well as how changes in the storage transmission and translation of information underlie major transitions in evolution He also draws on information and complexity theory to explain the emergence of Homo sapiens in Africa several hundred thousand years ago and the rapid and unprecedented spread of our species into a variety of environments in Australia and Eurasia including the Arctic and Beringia beginning between 75 000 and 60 000 years ago This magisterial work will appeal to all with an interest in the ever fascinating field of human evolution *Origins And Past Of Modern Humans, The: Towards Reconciliation* Keiichi Omoto, Phillip Vallentine Tobias, 1998-03-26 *Continuity or Replacement* Guenter Brauer, Fred H. Smith, 2020-08-26 This volume is based on the symposium on controversies in Homo sapiens evolution in Zagreb It examines the competing models for modern human origins within the framework of present day knowledge in the areas of human paleontology paleolithic archaeology and molecular genetics *Reader in Archaeological Theory* David S. Whitley, 1998 This Reader in Archaeological Theory presents sixteen articles of key theoretical significance in a format which makes this notoriously complex area easier for students to understand This volume provides an intellectual history of different approaches to archaeology which contextualizes the complex traditions of cognitive archaeology and postprocessualism on which it focuses organizes theories of archaeology the meanings of things the prehistoric mind and cognition gender ideology and social theory and archaeology's relationship to today's society and politics includes lucid section introductions to each section which provide context explain why the papers are so significant and summarize their key points emphasizes research from

the New World making archaeological theory especially relevant and accessible to students in North America

Evolutionary Perspectives on Imaginative Culture Joseph Carroll, Mathias Clasen, Emelie Jonsson, 2020-08-28 This pioneering volume offers an expansive introduction to the relatively new field of evolutionary studies in imaginative culture. Contributors from psychology, neuroscience, anthropology, and the humanities probe the evolved human imagination and its artefacts. The book forcefully demonstrates that imagination is part of human nature. Contributors explore imaginative culture in seven main areas: Imagination, Evolution, Mechanisms and Functions, Myth and Religion, Aesthetic Theory, Music, Visual and Plastic Arts, Video Games, and Films. Oral Narratives and Literature. *Evolutionary Perspectives on Imaginative Culture* widens the scope of evolutionary cultural theory to include much of what culture means in common usage. The contributors aim to convince scholars in both the humanities and the evolutionary human sciences that biology and imaginative culture are intimately intertwined. The contributors illuminate this broad theoretical argument with comprehensive insights into religion, ideology, personal identity, and many particular works of art, music, literature, film, and digital media. The chapters, *Imagination, the Brain's Default Mode Network, and Imaginative Verbal Artifacts* and *The Role of Aesthetic Style in Alleviating Anxiety About the Future*, are licensed under the terms of the Creative Commons Attribution 4.0 International License <http://creativecommons.org/licenses/by/4.0/>. **Genesis of Symbolic Thought** Alan Barnard, 2012-06-21 The distinguished social anthropologist Alan Barnard explores the origins of the symbolic thought that is fundamental to human existence.

Neanderthals and Modern Humans Clive Finlayson, 2004-03-11 *Neanderthals and Modern Humans* develops the theme of the close relationship between climate change, ecological change, and biogeographical patterns in humans during the Pleistocene. In particular, it challenges the view that Modern Human superiority caused the extinction of the Neanderthals between 40,000 and 30,000 years ago. Clive Finlayson shows that to understand human evolution, the spread of humankind across the world, and the extinction of archaic populations, we must move away from a purely theoretical evolutionary ecology base and realise the importance of wider biogeographic patterns, including the role of tropical and temperate refugia. His proposal is that Neanderthals became extinct because their world changed faster than they could cope with, and that their relationship with the arriving Modern Humans, where they met, was subtle. **The Neanderthal Legacy** Paul A. Mellars, 2015-07-28 The Neanderthals populated western Europe from nearly 250,000 to 30,000 years ago, when they disappeared from the archaeological record. In turn, populations of anatomically modern humans, *Homo sapiens*, came to dominate the area. Seeking to understand the nature of this replacement, which has become a hotly debated issue, Paul Mellars brings together an unprecedented amount of information on the behavior of Neanderthals. His comprehensive overview ranges from the evidence of tool manufacture and related patterns of lithic technology through the issues of subsistence and settlement patterns to the more controversial evidence for social organization, cognition, and intelligence. Mellars argues that previous attempts to characterize Neanderthal behavior as either modern or ape-like are both

overstatements We can better comprehend the replacement of Neanderthals he maintains by concentrating on the social and demographic structure of Neanderthal populations and on their specific adaptations to the harsh ecological conditions of the last glaciation Mellars's approach to these issues is grounded firmly in his archaeological evidence He illustrates the implications of these findings by drawing from the methods of comparative socioecology primate studies and Pleistocene paleoecology The book provides a detailed review of the climatic and environmental background to Neanderthal occupation in Europe and of the currently topical issues of the behavioral and biological transition from Neanderthal to fully modern populations

The Evolution of Human Language Wolfgang Wildgen, 2004-06-30 Wolfgang Wildgen presents three perspectives on the evolution of language as a key element in the evolution of mankind in terms of the development of human symbol use 1 He approaches this question by constructing possible scenarios in which mechanisms necessary for symbolic behavior could have developed on the basis of the state of the art in evolutionary anthropology and genetics 2 Non linguistic symbolic behavior such as cave art is investigated as an important clue to the developmental background to the origin of language Creativity and innovation and a population's ability to integrate individual experiments are considered with regard to historical examples of symbolic creativity in the visual arts and natural sciences 3 Probable linguistic fossils of such linguistic innovations are examined The results of this study allow for new proposals for a protolanguage and for a theory of language within a broader philosophical and semiotic framework and raises interesting questions as to human consciousness universal grammar and linguistic methodology Series B
