Situation Theory The Semantics:

Situation Theory and Its Applications: Volume 1 Robin Cooper, Kuniaki Mukai, John Perry, Center for the Study of Language and Information (U.S.), 1990 Situation Theory grew out of attempts by Jon Barwise in the late 1970s to provide a semantics for naked infinitive perceptual reports such as Claire saw Jon run Barwise's intuition was that Claire didn't just see Jon an individual but Jon doing something a situation Situations are individuals having properties and standing in relations A theory of situations would allow us to study and compare various types of situations or situation like entities such as facts events and scenes One of the central themes of situation theory of meaning and reference should be set within a general theory of information one moreover that is rich enough to do justice to perception communication and thought By now many people have contributed by the need to give a rigorous mathematical account of the principles of information that underwrite the theory

Situation Theory and Its Applications: Volume 2 Robin Cooper, Jon Barwise, Kuniaki Mukai, John Perry, 1990 Situation theory is the result of an interdisciplinary effort to create a full fledged theory of information Created by scholars and scientists from cognitive science computer science AI linguistics logic philosophy and mathematics the theory is forging a common set of tools for the analysis of phenomena from all these fields This volume presents work that evolved out of the Second Conference on Situation Theory and its Applications Twenty six essays exhibit the wide range of the theory covering such topics as natural language semantics philosophical issues about information mathematical applications and the visual representation of information in computer systems Jon Barwise is a professor of philosophy mathematics and logic at Indiana University in Bloomington Jean Mark Gawron is a researcher at SRI International and a consultant at Hewlett Packard Laboratories Gordon Plotkin is a professor of theoretical computer science at the University of Edinburgh Syun Tutiya is in the philosophy department at Chiba University in Japan

Situation Theory and Its Applications: Volume 3 Robin Cooper, Peter Aczel, Kuniaki Mukai, John Perry, 1990 Situation theory is the result of an interdisciplinary effort to create a full fledged theory of information Created by scholars and scientists from cognitive science computer science and AI linguistics logic philosophy and mathematics it aims to provide a common set of tools for the analysis of phenomena from all these fields Unlike Shannon Weaver type theories of information which are purely quantitative theories situation theory aims at providing tools for the analysis of the specific content of a situation signal message data base statement or other information carrying situation The question addressed is not how much information is carried but what information is carried

Semantics - Theories Claudia Maienborn, Klaus Heusinger, Paul Portner, 2019-02-19 Now in paperback for the first time since its original publication the material gathered here is perfect for anyone who needs a detailed and accessible introduction to the important semantic theories Designed for a wide audience it will be of great value to linguists cognitive scientists philosophers and computer scientists working on natural language The book covers theories of lexical semantics cognitively oriented approaches to semantics compositional theories of sentence semantics and discourse semantics This

clear elegant explanation of the key theories in semantics research is essential reading for anyone working in the area

The Semantics and Proof Theory of the Logic of Bunched Implications David J. Pym, 2013-04-17 This is a monograph about logic Specifically it presents the mathematical theory of the logic of bunched implications BI I consider BI s proof theory model theory and computation theory However the monograph is also about informatics in a sense which I explain Specifically it is about mathematical models of resources and logics for reasoning about resources I begin with an introduction which presents my background view of logic from the point of view of informatics paying particular attention to three logical topics which have arisen from the development of logic within informatics Resources as a basis for semantics Proof search as a basis for reasoning and The theory of representation of object logics in a meta logic The ensuing development represents a logical theory which draws upon the mathematical philosophical and computational aspects of logic Part I presents the logical theory of propositional BI together with a computational interpretation Part II presents a corresponding development for predicate BI In both parts I develop proof model and type theoretic analyses I also provide semantically motivated computational perspectives so beginning a mathematical theory of resources I have not included any analysis beyond conjecture of properties such as decidability finite models games or complexity I prefer to leave these matters to other occasions perhaps in broader contexts

Concise Encyclopedia of Philosophy of Language and Linguistics Alex Barber, Robert J Stainton, 2010-04-06 The application of philosophy to language study and language study to philosophy has experienced demonstrable intellectual growth and diversification in recent decades Concise Encyclopedia of Philosophy of Language and Linguistics comprehensively analyzes and evaluates many of the most interesting facets of this vibrant field An edited collection of articles taken from the award winning Encyclopedia of Language and Linguistics Second Edition this volume acts as a single stop desk reference resource for the field comprising contributions from the foremost

Conceptual Structures: Logical, Linguistic, and Computational Issues Bernhard Ganter, Guy W. Mineau, 2006-12-30 Computerscientistscreatemodelsofaperceivedreality Through AI techniques these models aim at providing the basic support for emulating cognitive behavior such as reasoning and learning which is one of the main goals of the AI research effort Such computer models are formed through the interaction of various acquisition and inference mechanisms perception concept learning conceptual clustering hypothesis testing probabilistic inference etc and are represented using different paradigms tightly linked to the processes that use them Among these paradigms let us cite biological models neural nets genetic programming logic based models first order logic modal logic rule based systems virtual reality models object systems agent systems probabilistic models Bayesian networks fuzzy logic linguistic models conceptual dependency graphs language based representations etc One of the strengths of the Conceptual Graph CG theory is its versatility in terms of the representation paradigms under which it falls It can be viewed and therefore used under different representation paradigms which makes it a popular choice for a wealth of applications Its full coupling with different cognitive processes lead to the opening of the field toward related research communities such as the Description Logic Formal Concept Analysis and Computational Linguistic communities We now see more and more research results from one community enrich the other laying the foundations of common philosophical grounds from which a successful synergy can emerge

The Handbook of Contemporary Semantic Theory Shalom Lappin, Chris Fox, 2019-02-12 The second edition of The Handbook of Contemporary Semantic Theory presents a comprehensive introduction to cutting edge research in contemporary theoretical and computational semantics Features completely new content from the first edition of The Handbook of Contemporary Semantic Theory Features contributions by leading semanticists who introduce core areas of contemporary semantic research while discussing current research Suitable for graduate students for courses in semantic theory and for advanced researchers as an introduction to current theoretical work

Events, Arguments, and Aspects Klaus Robering, 2014-03-15 The verb has often been considered the center of the sentence and has hence always attracted the special attention of the linguist The present volume collects novel approaches to two classical topics within verbal semantics namely argument structure and the treatment of time and aspect The linguistic material covered comes from a broad spectrum of languages including English German Danish Ukrainian and Australian aboriginal languages and methods from both cognitive and formal semantics are applied in the analyses presented here Some of the authors use a variety of event semantics in order to analyze argument structure and aspect whereas others employ ideas coming from object oriented

programming in order to achieve new insights into the way how verbs select their arguments and how events are classified into different types Both kinds of methods are also used to give accounts of dynamical aspects of semantic interpretation such as coercion and type shifting

Partiality and Underspecification in Information, Languages, and Knowledge Gemma Bel-Enguix, M. Dolores Jiménez-López, Roussanka Loukanova, 2017-08-21 In recent years there has been a proliferation of technological developments that incorporate processing of human language Hardware and software can be specialized for designated subject areas and computational devices are designed for a widening variety of applications At the same time new areas and applications are emerging by demanding intelligent technology enhanced by the processing of human language These new applications often perform tasks which handle information and they have a capacity to reason using both formal and human language Many sub areas of Artificial Intelligence demand integration of Natural Language Processing at least to

some degree Furthermore technologies require coverage of known as well as unknown agents and tasks with potential variations All of this takes place in environments with unknown factors The book covers theoretical work advanced applications approaches and techniques for computational models of information reasoning systems and presentation in language The book promotes work on intelligent natural language processing and related models of information thought reasoning and other cognitive processes The topics covered by the chapters prompt further research and developments of advanced systems in the areas of logic computability computational linguistics cognitive science neuroscience of language robotics and artificial intelligence among others

Theory of Information Mark Burgin, 2010 Presents a fresh approach to scientific understanding of information phenomena Based on an analysis of information processes in nature technology and society as well as on the main directions in information theory this book offers a theory that synthesizes various directions into a unified system
