Second Siberian Winter School "Algebra and Analysis" Igor' Aleksandrovich Aleksandrov, Leonid A. Bokut, Leonid Arkad'evich Bokut', Yurii G. Reshetnyak, 1992 This book the second in the series of proceedings of Soviet Regional Conferences contains papers presented at the Second Siberian Winter School Algebra and Analysis held at Tomsk State University in 1989 The papers touch on a variety of topics including Lie algebras and Lie groups sheaves and automorphic forms Sixteen Papers on Differential Equations , 1982-12-30 **Ordered Sets and Lattices II** , This indispensable reference source contains a wealth of information on lattice theory The book presents a survey of virtually everything published in the fields of partially ordered sets semilattices lattices and Boolean algebras that was reviewed in *Referativnyi Zhurnal Matematika* from mid 1982 to the end of 1985 A continuation of a previous volume the English translation of which was published by the AMS in 1989 as volume 141 in Translations Series 2 this comprehensive work contains more than 2200 references Many of the papers covered here were originally published in virtually inaccessible places The compilation of the volume was directed by Milan Kolibiar of Comenius University at Bratislava and Lev A Skorniyakov of Moscow University Of interest to mathematicians as well as to philosophers and computer scientists in certain areas this unique compendium is a must for any mathematical library Singularity Theory and Some Problems of Functional Analysis Semen Grigor'evich Gindikin, 1992 The emergence of singularity theory marks the return of mathematics to the study of the simplest analytical objects functions graphs curves surfaces The modern singularity theory for smooth mappings which is currently undergoing intensive developments can be thought of as a crossroad where the most abstract topics such as algebraic and differential geometry and topology complex analysis invariant theory and Lie group theory meet the most applied topics such as dynamical systems mathematical physics geometrical optics mathematical economics and control theory The papers in this volume include reviews of established areas as well as presentations of recent results in singularity theory The authors have paid special attention to examples and discussion of results rather than burying the ideas in formalism notation and technical details The aim is to introduce all mathematicians as well as physicists engineers and other consumers of singularity theory to the world of ideas and methods in this burgeoning area **The American Mathematical Monthly** , 1922 Includes section Recent publications **Translations; Series 2, Volume 33** American Mathematical Society, 1963

Discontinuous Dynamics and System Synchronization Fuhong Min, 2024-08-11 This book provides a systematic introduction to the dynamical behaviors of discontinuous dynamical systems and system synchronization The first part of the book presents the theory of flow switching in discontinuous dynamical systems as well as the switching dynamics in such discontinuous systems The second part presents a theory for interaction discontinuities between distinct dynamical systems

from which partial and complete chaotic synchronizations in such systems are studied analytically and experimentally

Nonlinear Waves and Weak Turbulence Vladimir Evgen'evich Zakharov, 1998 This book is a collection of papers on dynamical and statistical theory of nonlinear wave propagation in dispersive conservative media Emphasis is on waves on the surface of an ideal fluid and on Rossby waves in the atmosphere Although the book deals mainly with weakly nonlinear waves it is more than simply a description of standard perturbation techniques The goal is to show that the theory of weakly interacting waves is naturally related to such areas of mathematics as Diophantine equations differential geometry of waves Poincare normal forms and the inverse scattering method

Control Theory of Partial Differential Equations Guenter Leugering, Oleg Imanuvilov, Bing-Yu Zhang, Roberto Triggiani, 2005-05-27 The field of control theory in PDEs has broadened considerably as more realistic models have been introduced and investigated This book presents a broad range of recent developments new discoveries and mathematical tools in the field The authors discuss topics such as elasticity thermo elasticity aero elasticity interactions between fluids a

Perspectives in Partial Differential Equations, Harmonic Analysis and Applications Dorina Mitrea, Marius Mitrea, 2008 This volume contains a collection of papers contributed on the occasion of Mazya's 70th birthday by a distinguished group of experts of international stature in the fields of harmonic analysis partial differential equations function theory and spectral analysis reflecting the state of the art in these areas

Inverse Problems, Regularization Methods and Related Topics Sergei V. Pereverzyev, R. Radha, S. Sivananthan, 2025-03-31 This book features a thoughtfully curated collection of research contributions spanning regularization theory integral equations learning theory and matrix and operator theory These contributions were presented in honor of Prof M Thamban Nair on his 65th birthday during the International Conference on Analysis Inverse Problems and Applications which took place at the IIT Madras in Chennai India from July 18 21 2022 The book is a valuable resource for graduate students engineers scientists and researchers looking to advance their work in the development of innovative regularization algorithms It comprises 14 chapters contributed by esteemed experts and emerging researchers

Discontinuous Dynamical Systems on Time-varying Domains Albert C. J. Luo, 2009-11-06 Discontinuous Dynamical Systems on Time varying Domains is the first monograph focusing on this topic While in the classic theory of dynamical systems the focus is on dynamical systems on time invariant domains this book presents discontinuous dynamical systems on time varying domains where the corresponding switchability of a flow to the time varying boundary in discontinuous dynamical systems is discussed From such a theory principles of dynamical system interactions without any physical connections are presented Several discontinuous systems on time varying domains are analyzed in detail to show how to apply the theory to practical problems The book can serve as a reference book for researchers advanced undergraduate and graduate students in mathematics physics and mechanics Dr Albert C J Luo is a professor at Southern Illinois University Edwardsville USA His research is involved in the nonlinear theory of dynamical systems His main contributions are in the

following aspects a stochastic and resonant layer theory in nonlinear Hamiltonian systems singularity on discontinuous dynamical systems and approximate nonlinear theories for a deformable body

The Generalized Multipole Technique for Light Scattering Thomas Wriedt, Yuri Eremin, 2018-03-09 This book presents the Generalized Multipole Technique as a fast and powerful theoretical and computation tool to simulate light scattering by nonspherical particles It also demonstrates the considerable potential of the method In recent years the concept has been applied in new fields such as simulation of electron energy loss spectroscopy and has been used to extend other methods like the null field method making it more widely applicable The authors discuss particular implementations of the GMT methods such as the Discrete Sources Method DSM Multiple Multipole Program MMP the Method of Auxiliary Sources MAS the Filamentary Current Method FCM the Method of Fictitious Sources MFS and the Null Field Method with Discrete Sources NFM DS The Generalized Multipole Technique is a surface based method to find the solution of a boundary value problem for a given differential equation by expanding the fields in terms of fundamental or other singular solutions of this equation The amplitudes of these fundamental solutions are determined from the boundary condition at the particle surface Electromagnetic and light scattering by particles or systems of particles has been the subject of intense research in various scientific and engineering fields including astronomy optics meteorology remote sensing optical particle sizing and electromagnetics which has led to the development of a large number of modelling methods based on the Generalized Multipole Technique for quantitative evaluation of electromagnetic scattering by particles of various shapes and compositions The book describes these methods in detail

Pseudoperiodic Topology Maxim Kontsevich, 1999 Moscow mathematicians offer researchers and graduate students working in dynamical systems topology and number theory an account of the current status of a young branch of mathematics born at the boundary between those three disciplines The theory is related to the theory of algorithms convex integer polyhedra Morse inequalities real algebraic geometry statistical physics and algebraic number theory They discuss the topology of quasiperiodic functions statistics of Klein polyhedra and multidimensional continued fractions pseudoperiodic mappings how leaves of a closed one form wind around a surface and other topics They do not provide an index Annotation copyrighted by Book News Inc Portland OR
