rests upon the idea of context or design specificity in performance namely that variability in performance is closely referenced to design factors in the environment in which performance is occurring An exploration of the link between variability and related processes the book introduces a comprehensive framework for understanding human performance variability presented in terms of how human control of behavior is closely tied to design factors in the performance environment The authors introduce empirical evidence as well as practical examples and application areas in support of this framework The book begins with coverage of neurobiological and biomechanical basis of movement variability then examines rich and extensive empirical evidence available for context specificity in cognitive performance and learning as a basis for cognitive performance variability The book then reviews the evidence for context specificity in Student learning Displaced feedback conditions Human error behavior Affective performance Social and team performance The authors also explore work performance as influenced by complex sociotechnical systems and as a basis for performance variability applying control systems concepts to an interpretation of the nature and basis of performance variability in all of these domains They conclude by taking an evolutionary perspective on the origins and behavioral significance of human performance variability The book then provides strategies on how individuals groups and organizations can significantly reduce variability in human performance that often leads to systems failures
