Holmes, 2015-06-25 Excerpt from *Studies in Animal Behavior* The sent volume is largely devoted to subjects with which the writer's own investigations in animal behavior have been more or less closely concerned For the interest of the general reader the special contributions of the writer have been made subordinate to the broader aspects of these subjects Although there is little relationship between the various topics dealt with the different chapters are not devoid of a certain unity of aim The several types of behavior here described were studied in the endeavor to get a fuller insight into their mechanism or to interpret them from the genetic point of view These two methods of attack are not opposed or mutually exclusive as is sometimes implied but complementary We cannot obtain a complete explanation of behavior by an analysis of the activities of the individual alone it is necessary to know also the evolutionary history of the species and the various steps by which its

present behavior has been acquired The first chapter is historical and will it is hoped prepare the reader for a better appreciation of the general aim and import of what follows Some of the chapters in this volume have appeared elsewhere as special articles About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works **Studies in Animal and Human Behavior** Konrad Lorenz,1970 A Level

developmental origins of human behavior are often seen as having parallels with the natural world of animal behavior Researchers in ethology the biological study of animal behavior have amassed an enormous body of research but the psychological study of child development has often ignored the findings with the notable exception of John Bowlby s use of imprinting as a basis for a novel theory of human attachment The author of this new book a psychologist who has carried out research in ethology evaluates the impact of several decades of ethological work on developmental psychology He views human development from the context of the natural world thereby re establishing the links begun with Charles Darwin between research on child development and animal behavior Chapters summarize important research on observational methods animal models social processes sociobiology the comparative method non verbal communication and mental processes The Human Use of Animals F. Barbara Orlans,1998 This volume of case studies on animal ethics deals with important social controversies involving the human use of animals and analyzes the moral issues involved An introduction to ethical theory provides a framework to the 16 original case studies which include the use of animals in research testing and education as food as companion animals and in religious rites The book is intended for bioethics courses and animal career staff
