Handbook of Research on Schools, Schooling and Human Development Judith L. Meece, Jacquelynne S. Eccles, 2010-06-10 Children spend more time in school than in any social institution outside the home. And schools probably exert more influence on children's development and life chances than any environment beyond the home and neighbourhood. The purpose of this book is to document some important ways schools influence children's development and to describe various models and methods for studying schooling effects. Key features include Comprehensive Coverage: this is the first book to provide a comprehensive review of what is known about schools as a context for human development. Topical coverage ranges from theoretical foundations to investigative methodologies and from classroom level influences such as teacher-student relations to broader influences such as school organization and educational policies. Cross-Disciplinary: this volume brings together the divergent perspectives, methods, and findings of scholars from a variety of disciplines among them educational psychology, developmental psychology, school psychology, social psychology, psychiatry, sociology, and educational policy. Chapter Structure to ensure continuity: chapter authors describe 1) how schooling influences are conceptualized, 2) identify their theoretical and methodological approaches, 3) discuss the strengths and weaknesses of existing research, and 4) highlight implications for future research practice and policy. Methodologies: chapters included in the text feature various methodologies including longitudinal studies, hierarchical linear models, experimental and quasi-experimental designs, and mixed methods.

Changing Structures of Inequality Yannick Lemel, Heinz-Herbert Noll, 2002 The international sociological community has engaged recently in a controversial discussion on social inequality. There is a vigorous debate on whether the traditional concepts of social class and social stratification are still useful. Some researchers argue that social classes still offer a key explanation to social inequalities while others challenge the long-standing tradition of class analysis. New approaches have been proposed to describe recent social changes in the stratification system: vanishing middle class, two-thirds societies, cosmographic inequality, and classless society among others.
