Ukrainian people convincingly showing the world their originality Ukrainian national spiritual culture In 1872 the South Western Branch of the Imperial Russian Geographical Society was opened in Kyiv in the formation of which Pavlo Chubynsky played a decisive role The main task of the society was to collect process and distribute geographical ethnographic and statistical information Kostyantyn Levchuk s research is aimed at studying the process of activity of non governmental organizations of commodity producers of Ukraine in the context of reforming economic relations Trade union organizations as the most representative public organizations of workers had to prove to the power structures their position their vision regarding the ways out of the crisis and further social development Public organizations operating in the spheres of economy include associations of entrepreneurs farmers tenants employers and private owners They are the result of self organization of commodity producers which contributes to increased structuring and self regulation of the economy Unlike trade unions public associations of entrepreneurs faced other tasks which consisted in the formation of corporate interests and awareness of the need to develop their own consistent and comprehensive economic policy Ihor Belkin s chapter is devoted to trends in the development of educational services under today s conditions The author pays attention to the dynamics of changes in the educational process under the influence of market relations Attention is drawn to the key positions of each of the participants in the educational process The legislative framework of education is analyzed The content of the final result of the educational process is revealed Comparative characteristics of the leading higher education institutions of Ukraine and their competitiveness are given The key trends in the development of the provision of educational services abroad are characterized In the context of the education market the position of the main participants in this space is revealed in detail At the end of his chapter the author offers a set of analytical conclusions and proposals Volodymyr Manhora s scientific research is aimed at forming knowledge about the state when teaching the history of Ukraine The historical methodological aspect of the research has been developed which shows the dynamics of changes in the content of knowledge about the state and the methods of their assimilation in the learning process According to the author this is related to the appropriate conditions for the existence of historical and legal education in a specific historical period of the development of society the development of methodical science and the accumulation of teaching experience Only on the basis of the analysis of the historical and methodological aspect of this problem modern achievements of methodical science and teaching practice it is possible to scientifically justify and experimentally verify the effective method of forming knowledge about the state Investigating the problem of the formation of the institution of inheritance in Ukraine and the peculiarities of the implementation of inheritance cases in the conditions of martial law Tamil Manhora examines the controversial aspects of the legal regulation of the relevant legal relations The introduction of martial law in Ukraine undoubtedly affected all spheres of social relations including inheritance In this period questions that previously had only theoretical importance become urgent In particular the war and the temporary occupation of certain territories of Ukraine by the enemy significantly affect the exercise of rights

by individuals in the field of inheritance law It is first of all about significant obstacles in the realization of the right to receive inheritance Because of this the state must effectively and timely respond to such challenges in order to protect the rights and interests of subjects as well as ensure the stability of property turnover There is no doubt that war is a significant destabilizing factor in the dynamics of property relations Therefore the task of legal doctrine in this extremely difficult period for the state is to develop effective mechanisms for subjects to exercise their inheritance rights for their further regulatory implementation Olga Durach's chapter examines the history of military courts in Ukraine The main reasons that contributed to the liquidation of military courts have been revealed The basic principles of the organization of the work of military courts in Ukraine have been determined Peculiarities and problematic issues of the administration of justice during the period of martial law have been studied and the reasons for the need to resume the work of military courts have been determined Ways to resolve controversial issues regarding the resumption of military courts in Ukraine are proposed Zorislav Makarov explores traditional forms of philosophical determinism in his creative work Significant attention is paid to the reception and transformation of such ancient and medieval philosophical concepts in the synthetic context of Renaissance determinism such as the physics of Aristotle the history of Titus Livius the mystical pantheism of the Neoplatonists and Nicholas of Cusa the magic and astrology of Hermeticism the theological ontology of Aurelius Augustine and Thomas Aquinas The sequence of overcoming medieval dualism in nomology is established from the humanistic mastering of the potential of transcendent powers in legislation by the Renaissance man due to its limitation by the requirements of social and political expediency to the new substantialization of nature in the form of rational principles of its movement and transformations of natural things The content of the collective monograph corresponds to the direction of scientific work of the Department of History of Ukraine and Philosophy of Vinnytsia National Agrarian University The monograph is the result of the initiative topic Research of trends in socio economic development and consolidation of Ukrainian society in the modern history of Ukraine State registration number 0122U001425 The head of the subject is Professor K I Levchuk The monograph uses historicalgenetic method statistical analysis sociological economic legal and pedagogical methods

Advanced Calculus R. Creighton Buck, 2003-12-30 Demonstrating analytical and numerical techniques for attacking problems in the application of mathematics this well organized clearly written text presents the logical relationship and fundamental notations of analysis Buck discusses analysis not solely as a tool but as a subject in its own right This skill building volume familiarizes students with the language concepts and standard theorems of analysis preparing them to read the mathematical literature on their own The text revisits certain portions of elementary calculus and gives a systematic modern approach to the differential and integral calculus of functions and transformations in several variables including an introduction to the theory of differential forms The material is structured to benefit those students whose interests lean toward either research in mathematics or its applications

The Poincare Conjecture Donal O'Shea, 2009-05-26 Henri Poincaré was one of the greatest mathematicians

of the late nineteenth and early twentieth century He revolutionized the field of topology which studies properties of geometric configurations that are unchanged by stretching or twisting The Poincar conjecture lies at the heart of modern geometry and topology and even pertains to the possible shape of the universe The conjecture states that there is only one shape possible for a finite universe in which every loop can be contracted to a single point Poincar s conjecture is one of the seven millennium problems that bring a one million dollar award for a solution Grigory Perelman a Russian mathematician has offered a proof that is likely to win the Fields Medal the mathematical equivalent of a Nobel prize in August 2006 He also will almost certainly share a Clay Institute millennium award In telling the vibrant story of The Poincar Conjecture Donal O Shea makes accessible to general readers for the first time the meaning of the conjecture and brings alive the field of mathematics and the achievements of generations of mathematicians whose work have led to Perelman s proof of this famous conjecture Causality, Measurement Theory and the Differentiable Structure of Space-Time R. N. Sen,2010-02-11

Introducing graduate students and researchers to mathematical physics this book discusses two recent developments the demonstration that causality can be defined on discrete space times and Sewell s measurement theory in which the wave packet is reduced without recourse to the observer s conscious ego nonlinearities or interaction with the rest of the universe The definition of causality on a discrete space time assumes that space time is made up of geometrical points Using Sewell s measurement theory the author concludes that the notion of geometrical points is as meaningful in quantum mechanics as it is in classical mechanics and that it is impossible to tell whether the differential calculus is a discovery or an invention Providing a mathematical discourse on the relation between theoretical and experimental physics the book gives detailed accounts of the mathematically difficult measurement theories of von Neumann and Sewell **Knot Theory and Manifolds**
