

The Archaeology of Ancient China

Third edition, revised and enlarged

Kwang-chih Chang

In this new and enlarged edition, K. C. Chang extends his basic thesis of an indigenous development of Chinese civilization to new horizons and evaluates the latest archaeological information that has become available—in particular, the radiocarbon dates announced since 1972 and the important discoveries made outside the nuclear area of North China. Archaeologists and world historians alike will find the present volume essential to their understanding of ancient China.

Reviews of the second edition:

"Since its first appearance in 1962 this book has remained the most important single synthesis of Chinese prehistory. It is unique in the boldness of its conception and its ability to co-ordinate and make coherent the vast mass of available data without undue simplification."—*Journal of Polymer Science*

"The work is well written and lively and enthusiastic manner, well illustrated, and very well documented. It is unquestionably the best one-volume work for this period of Chinese archaeology."—*Archaeology*

"This book is required reading not only for any archaeologist even remotely concerned in East Asia but also for any historian aiming to understand ancient China."—*Harvard Journal of Asiatic Studies*
