Studies In Neurolinguistics Volume 4:

Studies in Neurolinguistics Haiganoosh Whitaker, Harry A Whitaker, 2013-10-22 *Studies in Neurolinguistics Volume 4* covers researches on language phenomena. The book discusses the evolution of human communication systems, the neural control of eye movements in acquired and developmental reading disorders, and the structure in a manual communication system developed without a conventional language model. The text also describes aphasic dissolution and language acquisition VOT distinctions in infants and disruption of written language in aphasia. The linguistic aspects of lexical retrieval disturbances in the posterior fluent aphasias, the neurologic correlates of anomia, and linguistic perseveration are also encompassed. Neuropsychologists and people involved in the study of neurolinguistics will find the book invaluable.

Speech and Language Norman J. Lass, 2014-06-28 *Speech and Language Advances in Basic Research and Practice Volume 10* is a compendium of articles that discuss a wide range of topics on speech and language processes and pathologies. This volume contains seven papers presenting a broad range of topics on speech and language. The book provides various articles discussing topics on the articulatory and perceptual characteristics associated with apraxia of speech, prevention of communicative disorders in cleft palate infants, and the relationship between normal phonological acquisition and clinical intervention. Topics on the role of auditory timing in the diagnosis and treatment of speech and language disorders, categorical perception, and the theoretical and clinical implications of speakers' abilities to control the output of their speech mechanism are presented as well. Linguists, speech pathologists, and researchers on language development will find the book very insightful and informative.

Sign Language of the Deaf I. M. Schlesinger, Lila Namir, 2014-05-10 *Sign Language of the Deaf: Psychological, Linguistic, and Sociological Perspectives* provides information pertinent to the psychological, educational, social, and linguistic aspects of sign language. This book presents the development in the study of sign language. Organized into four parts encompassing 10 chapters, this book begins with an overview of the fascinating account of sign language acquisition by small children. This text then explores the grammar of sign language and discusses the linguistic status of natural and contrived sign languages. Other chapters consider the many peculiarities of the lexicon and grammar of sign language and its differences in such respects from oral language. This book discusses as well sign language from the angle of psycholinguistics. The final chapter deals with the educational implications of the use of sign language. This book is a valuable resource for linguists and psycholinguists. Readers who are interested in sign language will also find this book useful.

Aspects of the Development of Competence W. A. Collins, 2015-12-22 Published in the year 1981, *Aspects of the Development of Competence* is a valuable contribution to the field of Developmental Psychology. **Language** Frederick J. Newmeyer, 1988 *Linguistics: The Cambridge Survey* is a comprehensive introduction to current research in all branches of the field of linguistics, from syntactic theory to ethnography of speaking, from signed language to the mental lexicon, from language acquisition to discourse analysis. Each chapter has been written by a specialist particularly distinguished in his or

her field who has accepted the challenge of reviewing the current issues and future prospects in sufficient depth for the scholar and with sufficient clarity for the student Each volume can be read independently and has a particular focus Volume I covers the internal structure of the language faculty itself while Volume II considers the evidence for and the implications of a generativist approach to language Psycholinguistics and neurolinguistics are covered in Volume III and Volume IV concentrates on sociolinguistics and the allied fields of anthropological linguistics and discourse and conversation analysis Several of the chapters in the work concentrate on the interface between different aspects of linguistic theory or the boundaries between linguistic theory and other disciplines Thus in both its scope and in its approach the Survey is a unique and fundamental reference work It undoubtedly fulfills the editor's aims of providing a wealth of information insight and ideas that will excite and challenge all readers with an interest in linguistics

Language, Gesture, and Space Karen Emmorey, Judy S. Reilly, 2013-06-17 This book brings together papers which address a range of issues regarding the nature and structure of sign languages and other gestural systems and how they exploit the space in which they are conveyed The chapters focus on five pertinent areas reflecting different but related research topics space in language and gesture point of view and referential shift morphosyntax of verbs in ASL gestural systems and sign language and language acquisition and gesture Sign languages and gestural systems are produced in physical space they manipulate spatial contrasts for linguistic and communicative purposes In addition to exploring the different functions of space researchers discuss similarities and differences between visual gestural systems established sign languages pidgin sign language International Sign homesign systems developed by deaf children with no sign language input novel gesture systems invented by hearing nonsigners and the gesticulation that accompanies speech The development of gesture and sign language in children is also examined in both hearing and deaf children charting the emergence of gesture manual babbling its use as a prelinguistic communicative device and its transformation into language like systems in homesigners Finally theoretical linguistic accounts of the structure of sign languages are provided in chapters dealing with the analysis of referential shift the structure of narrative the analysis of tense and the structure of the verb phrase in American Sign Language Taken together the chapters in this volume present a comprehensive picture of sign language and gesture research from a group of international scholars who investigate a range of communicative systems from formal sign languages to the gesticulation that accompanies speech

Individual Differences in Hemispheric Specialization A. Glass, 2012-12-06 This volume originates from a NATO Advanced Research Workshop held in Maratea Italy from 8th 15th October 198 Aims and contributions are described at greater length in the Introduction and the following chapters It is hoped that this volume will provide a critical overview of hemispheric specialization in relation to individual differences but one that is not intended to be comprehensive Three contributions on this theme are made by authors who were invited to the Workshop but were unable to participate in it The volume contains a critical appraisal of the differentially specialized functions of left and right human cerebral hemispheres in verbal and

visuospatial domains respectively formerly cerebral dominance in relation to individual variation due for example to gender and handedness Critical cross comparison of several methods of assessing hemispheric specialization such as perceptual behavioral clinical neurological electrophysiological and real time methods of assessment of cerebral orientation have been made Individual differences have been considered in relation to statistical concepts in the assessment of cerebral lateralization Some emphasis has been placed on the application of these methods and concepts to psychopathology

From Gesture to Language in Hearing and Deaf Children Virginia Volterra, Carol J. Erting, 2012-12-06 Virginia Volterra and Carol Erting have made an important contribution to knowledge with this selection of studies on language acquisition Collections of studies clustered more or less closely around a topic are plentiful but this one is unique Volterra and Erting had a clear plan in mind when making their selection Taken together the studies make the case that language is inseparable from human interaction and communication and especially in infancy as much a matter of gestural as of vocal behavior The editors have arranged the papers in five coherent sections and written an introduction to each section in addition to the expected general introduction and conclusion No introductory course in child and language development will be complete without this book Presenting successively studies of hearing children acquiring speech languages of deaf children acquiring sign languages of hearing children of deaf parents of deaf children of hearing parents and of hearing children compared with deaf children Volterra and Erting give one a wider than usual view of language acquisition It is a view that would have been impossible not many years ago when the primary languages of deaf adults had received neither recognition nor respect

Linguistic Disorders and Pathologies Gerhard Blanken, Jürgen Dittmann, Hannelore Grimm, John C. Marshall, Claus-W. Wallesch, 2008-07-14 This handbook is geared towards the following aims Reviewing the state of research on disordered language perception and production in adults and children Describing and discussing present attempts at modelling human language processing by using linguistic disorders and pathologies as a data base Presenting diagnostic and therapeutic concepts Pointing out gaps and inconsistencies in current knowledge and theories In bringing together knowledge of different sources and disciplines under a common roof the editors have achieved a comprehensive overview of the state of the art in the field of language pathology Because of the diversity of the disciplines contributing to this scientific field the chapters differ clearly in theories and methodologies Yet this handbook represents a clear and common interdisciplinary contribution to linguistic disorders and pathologies and furthermore demonstrates the amount of interdisciplinary interaction still required We chose this title in order to encompass as broadly as possible abnormalities and alterations of language perception comprehension and production in adults and children including nonpathological disorders This handbook will be of interest to anybody involved with disordered language and or language and speech disturbances such as linguists and psychologists working in related research areas or teaching related subjects scientists analyzing and modelling linguistic and cognitive processes e.g. in Cognitive Psychology Psycholinguistics Neurolinguistics Neuropsychology

Behavioural Neurology Artificial Intelligence Research and Cognitive Science clinicians dealing with acquired or developmental language disorders and speech pathologists and therapists Besides presenting the state of the art the handbook provides rich bibliographical information for research workers clinicians and advanced students **The Pragmatic Basis of Aphasia** Marc L. Schnitzer, 2014-02-24 This language study's primary purpose is to use aphasic performance to understand language rather than to use linguistic analysis to understand aphasia Examining the detailed nature of linguistic performance of bilingual aphasics in a variety of natural and metalinguistic tasks the book reports the results of a study of morphology and syntax among Spanish English bilingual and monolingual hispanophones in Puerto Rico

The Concise Corsini Encyclopedia of Psychology and Behavioral Science W. Edward Craighead, Charles B. Nemeroff, 2004-04-19 Edited by high caliber experts and contributed to by quality researchers and practitioners in psychology and related fields Includes over 500 topical entries Each entry features suggested readings and extensive cross referencing Accessible to students and general readers Edited by two outstanding scholars and clinicians **The Neuroscience of Language** Friedemann Pulvermüller, 2002 This 2003 book puts forth a systematic model of language to bridge the gap between linguistics and neuroscience **Dictionary of Communication Disorders** David Morris, 2013-01-16 This dictionary provides clear and concise explanations of terms used in the field of speech therapy pathology and relevant terms in related fields including augmentative alternative communication hearing linguistic medicine phonetics phonology and psychology psychiatry Those working with people who have communication disorders and those who may be returning to this field will find the explanations easy to understand Terms include assessments therapy programmes and current theories in these fields This edition has been thoroughly updated It includes useful website addresses for manufacturers and suppliers of communication aids and publishers of assessments and where to find useful information on the internet for various conditions [Alzheimer Discourse](#) Vai Ramanathan, 2013-11-05 This book deals with the narrative discourse specifically lifestories of 16 patients suffering from Alzheimer's disease AD It attempts to understand the discourse of these patients in contextual terms Thus far the dominant explanation for incoherence in AD speech has been largely provided by research in psycholinguistics much of which has understood AD speech in terms of the progressively deteriorating nature of the disease This study provides a complementary view by examining ways in which some social factors audiences setting and time influence the extensiveness and meaningfulness of AD talk By offering both an examination of interactions across the data as well as analyzing particular cases in detail this unusual study attempts to juxtapose some general insights regarding AD discourse with case specific ones Sociolinguistic analyses of the data demonstrate how certain audiences and particular settings set in motion discourse activities that either facilitate the patients ability to recall their pasts or impede it This analysis also includes a critical look at the researcher's contribution in negotiating and reinforcing these activities Ethnographic details about the social worlds of some of these patients shed light

on how larger social contexts at least indirectly contribute to exacerbating the patients conditions or stabilizing them The analyses of both context and language provides a more global understanding of the Alzheimer experience This study also discusses some interactional strategies by which professionals can begin to engage AD patients in meaningful talk as well as ways by which they can better hear AD patients cues at narrating Throughout this book underscores the need to factor in social factors when making assessments regarding AD patients communicative abilities

The Psychology of Learning and Motivation, 2009-09-19 The Psychology of Learning and Motivation series publishes empirical and theoretical contributions in cognitive and experimental psychology ranging from classical and instrumental conditioning to complex learning and problem solving Each chapter thoughtfully integrates the writings of leading contributors who present and discuss significant bodies of research relevant to their discipline Volume 51 includes chapters on such varied topics as emotion and memory interference electrophysiology mathematical cognition and reader participation in narrative Volume 51 of the highly regarded Psychology of Learning and Motivation series An essential reference for researchers and academics in cognitive science Relevant to both applied concerns and basic research

Neural Models of language Processes Michael Arbib, 2012-12-02 Neural Models of Language Processes offers an interdisciplinary approach to understanding the nature of human language and the means whereby we use it The book is organized into five parts Part I provides an opening framework that addresses three tasks to place neurolinguistics in current perspective to provide two case studies of aphasia and to discuss the rules of the game of the various disciplines that contribute to this volume Part II on artificial intelligence AI and processing models discusses the contribution of AI to neurolinguistics The chapters in this section introduce three AI systems for language perception the HWIM and HEARSAY systems that proceed from an acoustic input to a semantic interpretation of the utterance it represents and Marcus9 system for parsing sentences presented in text Studying these systems demonstrates the virtues of implemented or implementable models Part III on linguistic and psycholinguistic perspectives includes studies such as nonaphasic language behavior and the linguistics and psycholinguistics of sign language Part IV examines neurological perspectives such as the neuropathological basis of Broca's aphasia and the simulation of speech production without a computer Part V on neuroscience and brain theory includes studies such as the histology architectonics and asymmetry of language areas hierarchy and evolution in neurolinguistics and perceptual motor processes and the neural basis of language

Explorations in Cognitive Neuropsychology Alan Parkin, 2016-03-23

Cognitive neuropsychology has now established a major place in the teaching of undergraduate psychology degrees and is an important topic of postgraduate research The subject is also of increasing interest to clinicians because of its links with devising remediation procedures for people with brain injury Explorations in Cognitive Neuropsychology is the first major text to appear on this topic since the late 1980s and thus introduces the reader to a vast amount of research previously unavailable in textbook format The book is written in a lively and engaging style which nonetheless enables the reader to get

a scholarly in depth overview of this important field The coverage of topics is very broad ranging It begins with an overview of the subject including issues such as research strategy and advances in neuroimaging Following this are chapters on blindsight agnosia facial processing impairments and the rapidly growing area of neglect The next chapter is devoted to studies of the split brain Two chapters then cover the enormous developments in devising functional architectures of the language system from the observation of discrete language impairments Various aspects of memory impairments are then discussed and the book ends with a consideration of frontal lobe functions At various points the book also covers the contribution of connectionist modelling to cognitive neuropsychology

Modularity and the Motor theory of Speech

Perception Michael Studdert-Kennedy, Ignatius G. Mattingly, 2014-01-02 A compilation of the proceedings of a conference held to honor Alvin M Liberman for his outstanding contributions to research in speech perception this volume deals with two closely related and controversial proposals for which Liberman and his colleagues at Haskins Laboratories have argued forcefully over the past 35 years The first is that articulatory gestures are the units not only of speech production but also of speech perception the second is that speech production and perception are not cognitive processes but rather functions of a special mechanism This book explores the implications of these proposals not only for speech production and speech perception but for the neurophysiology of language language acquisition higher level linguistic processing the visual perception of phonetic gestures the production and perception of sign language the reading process and learning to read The contributors to this volume include linguists psycholinguists speech scientists neurophysiologists and ethologists Liberman himself responds in the final chapter

Input and Interaction in Language Acquisition Clare Gallaway, Brian J.

Richards, 1994-04-14 Language addressed to children or Baby Talk became the subject of research interest thirty years ago Since then the linguistic environment of infants and toddlers has been widely studied Input and Interaction in Language Acquisition is an up to date statement of the facts and controversies surrounding Baby Talk its nature and likely effects With contributions from leading linguists and psychologists it explores language acquisition in different cultures and family contexts in typical and atypical learners and in second and foreign language learners It is designed as a sequel to the now famous Talking to Children edited by Catherine Snow and Charles Ferguson and Professor Snow here provides an introduction comparing issues of importance in the field today with the previous concerns of researchers
