

## Need of Immobilization

- ▶ Plant cell culture has been used for production of secondary metabolite.
- ▶ Characteristics of plant cell culture such as slow growth, large size, sensitive to shear and oxygen and need of cell to cell contact for metabolite production, the compound produced should be of high value and low volume.

The use of high biomass level for extended period would be one method of increasing productivity and hence reducing the costs this can be achieved by the immobilization of plant cell.

**Studying Cell Metabolism and Cell Interactions Using Microfluidic Devices Coupled with Mass Spectrometry** Huibin Wei,2012-10-18 This thesis describes a new approach for cell analysis by the rapid developing microfluidic technology The nominee has made great contributions to develop a new analysis platform which combined microfluidic devices with mass spectrometry to determine the trace compounds secreted by cells Based on this analysis platform she studied the specific cell secreting behaviors under controlled microenvironment of which the secretion compounds were qualified and semi quantified by mass spectrometry A novel cell sorting device integrated

homogenous porous PDMS membrane was invented to classify cells from real samples based on the size difference. The nominee further studied the signal transmission between different cells and the signal chemicals were qualitative and quantitative monitored by the analysis platform. This indicates the potential significant application of the new cell analysis platform in medicine screening and early diagnosis.
