## **Studies Of Fingerprint Matching Using The Nist Verification:**

Studies of Fingerprint Matching Using the NIST Verification Test Bed Charles L. Wilson, 2004-02 A series of fingerprint matching studies have been conducted on an experimental lab system called the Verification Test Bed VTB The VTB is a collection of commercial off the shelf computer hardware an open source operating system a suite of public domain application software Results are presented that compare various sources of fingerprints assess the image quality of fingerprints by analyzing the matcher scores for inked live scan impressions study the tradeoffs of matching rolled fingerprints with plain impression This report illustrates the wide range of image types quality that exist in gov t fingerprint databases the effect this variability has on the accuracy of matching using a single algorithm Illustrated **Studies of**

**Authentication** Davide Maltoni, Anil K. Jain, 2004-09-21 Biometric authentication is increasingly gaining popularity in a large spectrum of applications ranging from government programs e g national ID cards visas for international travel and the fight against terrorism to personal applications such as logical and physical access control Although a number of effective solutions are currently available new approaches and techniques are necessary to

overcome some of the limitations of current systems and to open up new frontiers in biometric research and development The 30 papers presented at Biometric Authentication Workshop 2004 BioAW 2004 provided a snapshot of current research in biometrics and identify some new trends This volume is composed of sections face recognition fingerprint recognition template protection and security other biometrics and fusion and multimodal biometrics For classical biometrics like fingerprint and face recognition most of the papers in Sect 1 and 2 address robustness issues in order to make the biometric systems work in suboptimal conditions examples include face detection and recognition under uncontrolled lighting and pose variations and fingerprint matching in the case of severe skin distortion Benchmarking and interoperability of sensors and liveness detection are also topics of primary interest for fingerprint based systems Biometrics alone is not the solution for complex security problems Some of the papers in Sect 3 focus on designing secure systems this requires dealing with safe template storage checking data integrity and implementing solutions in a privacy preserving fashion The match on tokens approach provided that current accuracy and cost limitations can be satisfactorily solved by using new algorithms and hardware is certainly a promising alternative The use of new biometric indicators like eye movement 3D finger shape and soft traits e g

Bolle,Jonathan H. Connell,Sharath Pankanti,Nalini K. Ratha,Andrew W. Senior,2013-06-29 Starting with fingerprints more than a hundred years ago there has been ongoing research in biometrics Within the last forty years face and speaker recognition have emerged as research topics However as recently as a decade ago biometrics itself did not exist as an independent field Each of the biometric related topics grew out of different disciplines For example the study of fingerprints came from forensics and pattern recognition speaker recognition evolved from signal processing the beginnings of face recognition were in computer vision and privacy concerns arose from the public policy arena One of the challenges of any new field is to state what the core ideas are that define the field in order to

provide a research agenda for the field and identify key research problems Biometrics has been grappling with this challenge since the late 1990s With the maturation of biometrics the separate biometrics areas are coalescing into the new discipline of biometrics The establishment of biometrics as a recognized field of inquiry allows the research community to identify problems that are common to biometrics in general It is this identification of common problems that will define biometrics as a field and allow for broad advancement
