

## Authoritarian state of China hinders greater economic development

China is without a doubt a country that has risen through the ranks of economic development. Their technological aspirations have allowed them to compete with developed countries like the US and Japan even though they are still a middle-income country. This essay will discuss China's placement in regard to their economic development in comparison to other countries as well as mentioning factors as to why China is not yet a developed country even though they have succeeded into the second largest economy in the world. Furthermore, this essay will explore the political system and structure of an authoritarian state that governs China and compare it to that of countries that are developed, like the United States of America (US) and Japan who follow a democratic regime, in an attempt to determine the hindering factors that holds China back from attaining an increased economic development status.

### Chinese technological sophistication

In order to understand how one can measure the technological sophistication of a country, one must know the criteria that is taken into consideration when evaluating the sophistication. Technology, innovation and research and development are the key driving factors that need to be present in order to achieve economic performance (Vlčková, 2012). Innovation being the implementation of a new or significantly improved product generated by a country and research and development offers creative work that is undertaken on a systematic basis whereby it increases knowledge of man, culture and society in order to use the knowledge to devise new applications which increases technological sophistication (Vlčková, 2012). China, specifically, has been on a mission to achieve technological sophistication and furthermore technology leadership since the 1980's.

China has been successful thus far in their pursuit of economic growth which is surprising to researchers seeing as though the state has not accomplished many important reforms and the rule of law remains weak. The progress that has been achieved is largely due to China's trade participation as it played a significant role in their economic transformation and only intensified after joining the World Trade Organization (WTO). China's development strategy focuses largely on technological transformation in research and development, artificial intelligence and 5G networks whereby China has been able to match that of the US and even in some circumstances surpassed them (Paszak, 2019). This is evident through continuous

**Essays in Naval History, from Medieval to Modern** N.A.M. Rodger, 2023-05-31 The articles collected here two appearing for the first time in English cover a number of topics central to naval history and illustrate the author s contention that this is not only or even chiefly a distinct area of special study but rather a central theme running through the history of England and of the whole British Isles Though the subjects and the styles vary a good deal the studies are linked by a

common approach and some common ideas Hence many examine ways in which naval history has formed a key element in such subjects as intellectual religious administrative or medical history and explored the nature and meaning of sea power as a theme At the same time naval history is a technical subject which demands a willingness to understand warships the most complex artefacts and the structure of large and complex organisations Detailed evidence about ships and weapons can build large conclusions for example about late Anglo Saxon government and military organisation or about the nature of warfare at sea in the Renaissance era While mostly written from the British point of view several essays explicitly survey naval developments over a range of countries and even the most narrowly focused are at least implicitly aware of the wider world of war at sea
