---

## Page 1: Introduction to Cost Accounting

### 1. What is Cost Accounting?

Cost accounting is the process of tracking, recording, and analyzing costs associated with producing goods or services. It helps businesses make informed decisions by understanding how much it costs to create products and run operations. Cost accounting is essential for pricing, budgeting, and profitability analysis.

---

### 2. Types of Costs

#### Fixed Costs vs. Variable Costs:

- **Fixed Costs:** Costs that remain constant regardless of the production volume. Examples include rent, salaries, and insurance premiums.
- **Variable Costs:** Costs that fluctuate with production volume. Examples include raw materials and direct labor costs.

#### Direct Costs vs. Indirect Costs:

- **Direct Costs:** Costs that can be traced directly to the production of goods or services, such as materials and labor used in manufacturing a product.
- **Indirect Costs:** Costs that cannot be directly attributed to a specific product, such as maintenance costs, utilities, and administrative expenses.

#### Relation to Production Processes:

Direct costs are closely tied to the production line, while indirect costs support the overall operation.

---

### 3. Cost Behavior Analysis

#### How Costs Behave with Production Changes:

- **Fixed Costs:** Stay constant regardless of production volume, so the cost per unit decreases as production increases.
- **Variable Costs:** Increase directly with production volume, leading to a stable cost per unit.
