The History News In Spave:

Teacher in Space Project ,1985 **Remembering the Space Age** Steven J. Dick,2008 From the Publisher Proceedings of October 2007 conference sponsored by the NASA History Division and the National Air and Space Museum to commemorate the 50th anniversary of the Sputnik 1 launch in October 1957 and the dawn of the space age *History at NASA* ,1986 **The Making of Public Space** Luc Boltanski,Arnaud Esquerre,2024-11-18 This new book by Luc Boltanski and Arnaud Esquerre is a highly original analysis of the two key processes that shape the contemporary public sphere On the one hand there are the processes of news provision which select out a range of facts and events and bring them to the attention of a large number of people who have not for the most part experienced them directly On the other hand there are processes of politicization which problematize the facts made known by news provision and treat them as issues that concern citizens and the state Politicization is typically characterized by a diversity of interpretations which in turn gives rise to a proliferation of commentary discussion polemic and division In order to study these processes and their interaction Boltanski and Esquerre draw on a vast repository of user comments left on the site of a major daily newspaper as well as the thousands of comments posted on an online video site They uncover what is sayable by comparing published comments with those deleted by moderators They capture opinions in the course of their formation rather than describing views which have long become cemented these are often reflexive and wise deriving from responses to interviews or opinion polls They map out the parameters of politicization today touching on various hot topics such as feminism the environment immigration religion nationalism and Europe This is not just a book about the news and the press but a major new work which shows how political opinion comes into being and the way in which it affects our daily lives It will be of great value to students and scholars in media studies sociology and politics as well as to anyone interested in the state of politics and the media in our contemporary digital age *A History of the Kennedy Space Center* Kenneth Lipartito,Orville R Butler,2007-08-12 This first comprehensive history of the Kennedy Space Center NASA s famous launch facility located at Cape Canaveral Florida reveals the vital but largely unknown work that takes place before the rocket is lit Though the famous Vehicle Assembly Building and launch pads dominate the flat Florida landscape at Cape Canaveral and attract 1 5 million people each year to its visitor complex few members of the public are privy to what goes on there beyond the final outcome of the flaring rocket as it lifts into space With unprecedented access to a wide variety of sources including the KSC archives other NASA centers the National Archives and individual and group interviews and collections Lipartito and Butler explore how the methods and technology for preparing testing and launching spacecraft have evolved over the last 45 years Their story includes the Mercury and Gemini missions the Apollo lunar program the Space Shuttle scientific missions and robotic spacecraft and the International Space Station as well as the tragic accidents of Challenger and Columbia Throughout the authors reveal the unique culture of the people who work at KSC and make Kennedy distinct from other parts of NASA As Lipartito and Butler

show big NASA projects notably the Space Shuttle and the International Space Station had much to learn on the ground before they made it to space Long before a spacecraft started its ascent crucial work had been done work that combined the muscular and mundane with the high tech and applied the vital skills and knowledge of the men and women of KSC to the design of vehicles and missions The authors challenge notions that successful innovation was simply the result of good design alone and argue that with large technical systems real world experience actually made the difference between bold projects that failed and innovations that stayed within budget and produced consistent results The authors pay particular attention to operational knowledge developed by KSC the insights that came from using and operating complex technology This work makes it abundantly clear that the processes performed by ground operations are absolutely vital to success **A**

Dark Star Matthew H. Hersch,2023-12-26 A captivating history of NASA's Space Transportation System the space shuttle chronicling the inevitable failures of a doomed design In Dark Star Matthew Hersch challenges the existing narrative of the most significant human space program of the last 50 years NASA's space shuttle He begins with the origins of the space shuttle a century long effort to develop a low cost reusable rocket powered airplane to militarize and commercialize space travel which Hersch explains was built the wrong way at the wrong time and for all the wrong reasons Describing the unique circumstances that led to the space shuttle's creation by President Richard Nixon's administration in 1972 and its subsequent flights from 1981 through 2011 Hersch illustrates how the space shuttle was doomed from the start While most historians have accepted the view that the space shuttle's fatal accidents including the 1986 Challenger explosion resulted from deficiencies in NASA's management culture that lulled engineers into a false confidence in the craft Dark Star reveals the widespread understanding that the shuttle was predestined for failure as a technology demonstrator The vehicle was intended only to give the United States the appearance of a viable human spaceflight program until funds became available to eliminate its obvious flaws Hersch's work seeks to answer the perilous questions of technological choice that confront every generation and it is a critical read for anyone interested in how we can create a better world through the things we build

Test Project Edward Clinton Ezell, 1978 *Legislative History of the Federal Election Campaign Act of 1971*, 1982 *Space and the American Imagination* Howard E. McCurdy, 2011-03 People dreamed of cosmic exploration winged spaceships and lunar voyages space stations and robot astronauts long before it actually happened Space and the American Imagination traces the emergence of space travel in the popular mind its expression in science fiction and its influence on national space programs Space exploration dramatically illustrates the power of imagination Howard E McCurdy shows how that power inspired people to attempt what they once deemed impossible In a mere half century since the launch of the first Earth orbiting satellite in 1957 humans achieved much of what they had once only read about in the fiction of Jules Verne and H G Wells and the nonfiction of Willy Ley Reaching these goals however required broad based support and McCurdy examines how advocates employed familiar metaphors to excite interest promising for example that space exploration would recreate the American frontier experience and prepare the public for daring missions into space When unexpected realities and harsh obstacles threatened their progress the space community intensified efforts to make their wildest dreams come true This lively and important work remains relevant given contemporary questions about future plans at NASA Fully revised and updated since its original publication in 1997 Space and the American Imagination includes a reworked introduction and conclusion and new chapters on robotics and space commerce
