Philosophy of Artificial Intelligence
Rajakishore Nath, 2009 This book deals with the major philosophical issues in the theoretical framework of Artificial Intelligence AI in particular and cognitive science in general The researchers in AI are concerned with the issues of consciousness human subjectivity creativity etc Cognitive Science and AI argue that consciousness can be artificially created and comprehended in the function of robots The robotic activities explain the mechanism involved in computation language processing sensing the information etc Contrary to this thesis the philosophical study tries to show that human consciousness thinking imagination etc are much larger concepts and need to be delved into in the broad theoretical framework This book is a critique of the mechanistic theory of mind It shows the basic foundation of AI and its limitations in explaining the activities of the human mental life Machine functionalism fails to account for the subjective nature of consciousness and the creativity involved in the conscious acts There are two aspects of this thesis the epistemological and the metaphysical

Epistemologically the subject of consciousness intimately knows the raw feelings or the qualia Metaphysically speaking however the raw feelings are real in the sense that they are part of the furniture of the mental world Therefore we can hardly deny that the mental world is real **Philosophy and Theory of Artificial Intelligence 2017** Vincent C.

Müller,2012-08-23 Can we make machines that think and act like humans or other natural intelligent agents The answer to this question depends on how we see ourselves and how we see the machines in question Classical AI and cognitive science had claimed that cognition is computation and can thus be reproduced on other computing machines possibly surpassing the abilities of human intelligence This consensus has now come under threat and the agenda for the philosophy and theory of AI must be set anew re defining the relation between AI and Cognitive Science We can re claim the original vision of general AI from the technical AI disciplines we can reject classical cognitive science and replace it with a new theory e g embodied or we can try to find new ways to approach AI for example from neuroscience or from systems theory To do this we must go back to the basic questions on computing cognition and ethics for AI The 30 papers in this volume provide cutting edge work from leading researchers that define where we stand and where we should go from here
