Factors that affect the rate of diffusion

- Difference in concentration**
The steeper the concentration gradient, the faster the rate of diffusion.
- Temperature**
The higher the temperature, the faster the rate of diffusion.
- Surface area of the membrane**
The larger the membrane surface area, the faster the rate of diffusion.

Adaptations for exchanging substances

Single-celled organisms have a large surface area to volume ratio. This allows enough molecules to be transported across their cell membranes to meet their needs.

Multicellular organisms have a small surface area to volume ratio. This means they need specialised organ systems and cells to allow enough molecules to be transported into and out of their cells.

Exchange surfaces work most efficiently when they have a large surface area, a thin membrane, and a good blood supply.

Villi in the small intestine for absorbing nutrients

Alveoli in the lungs for gas exchange

The rate of diffusion is increased because the membranes of the alveoli:

- have a large surface area
- are moist
- are only one cell thick (short diffusion pathway)

Fish gills for gas exchange

- Fish gills are made up of stacks of thin filaments with:
- a large surface area to increase diffusion
- a network of capillaries (good blood supply)

Root hair cells for uptake of water and minerals

lots of mitochondria to take a mineral ion by active transport

Key terms

Make sure you can write a definition for these key terms.

active transport	alveoli	capillaries	concentration	diffusion	dilute
gill filament	gradient	osmosis	partially permeable membrane	urea	villi
passive process	root hair cell	stomata

State Sciences Committee, Committee on Opportunities in High Magnetic Field Science, 2005-08-26 High field magnets those that operate at the limits of the mechanical and or electromagnetic properties of their structural materials are used as research tools in a variety of scientific disciplines The study of high magnetic fields themselves is also important in many areas such as astrophysics Because of their importance in scientific research and the possibility of new breakthroughs the National Science Foundation asked the National Research Council to assess the current state of and future prospects for high field science and technology in the United States This report presents the results of that assessment It focuses on scientific and technological challenges and opportunities and not on specific program activities The report provides findings and recommendations about important research directions the relative strength of U S efforts compared to other countries and ways in which the program can operate more effectively

Saleh,Dr. Myint Swe Khine,2011-02-01 The research into how students attitudes affect their learning of science related subjects has been one of the core areas of interest by science educators The development in science education records various attempts in measuring attitudes and determining the correlations between behavior achievements career aspirations gender identity and cultural inclination Some researchers noted that attitudes can be learned and teachers

can encourage students to like science subjects through persuasion But some view that attitude is situated in context and has much to do with upbringing and environment The critical role of attitude is well recognized in advancing science education in particular designing curriculum and choosing powerful pedagogies and nurturing students Since Noll s 1935 seminal work on measuring the scientific attitudes a steady stream of research papers describing the development and validation of scales have appeared in scholarly publications Despite these efforts the progress in this area has been stagnated by limited understanding of the conception of attitude dimensionality and inability to determine the multitude of variables that made up such concept This book makes an attempt to take stock and critically examine classical views on science attitudes and explore contemporary attempts in measuring science related attitudes The chapters in this book are a reflection of researchers who work tirelessly in promoting science education and highlight the current trends and future scenarios in attitude measurement
