Paleoneurology 1804-1966 T. Edinger,2012-12-06 Dr Tilly Edinger s first published paper dealt with a brain cast in more exact terms an endocast of the cranial cavity of Noth08auru8 a Triassic relative of the plesiosaurs With this she embarked on a working lifetime of devotion to paleoneurology a field of study that she was to transform A daughter of the famous neurologist Ludwig Edinger it was appropriate as well as fortunate that her early interest in fossil vertebrates should have become focused upon the recovery of such information concerning the history of the central nervous system as could be obtained from fossil material Her father evidently had no direct influence upon her choice of this then obscure and difficult subject although within the family circle she presumably absorbed from him some appreciation of neoneurology Indirectly however through his accumulation in Frankfurt of an outstanding collection of recent brains he provided the comparative

material essential to her studies during the years she spent there Early in her career she published *Die Försilen Gehirne* 1929 Here was gathered together for the first time nearly all the widely scattered information on the topic It had an immediate effect As one author justly remarked this invaluable review serves not only as a basis for continuing and systematizing research on brain casts but also as an indication of the more serious gaps in present knowledge Simpson 1933 The bibliography appended to it listed 250 titles A bibliography she published in 1937 included 160 additional titles

A Mind for Tomorrow Erika Erdmann, David Stover, 2000-03-30 Stover and Erdmann deal with the crises confronting today's world and argue that solutions will come not from new technology nor in retreating to an idealized agrarian past but by overhauling the beliefs that structure society They link the dilemmas facing civilization to a fundamental rift running through society one between religion and the humanities rooted in subjective experience and science which emphasizes objective knowledge They suggest a promising way of closing this rift found in the work of Nobel Laureate and neuroscientist Roger W Sperry They examine Sperry's lifework including his famous split brain research and show how it led him to propose a theory of consciousness that challenged science's dismissal of subjective experience as irrelevant By seeing consciousness as an emergent causal property of brain function Sperry reinstated subjective experience into the scientific worldview laid the foundation for the cognitive revolution that has since swept through psychology and created a means by which science can help create ethical systems better able to deal with today's challenges Stover and Erdmann conclude by looking at ways in which others have built upon Sperry's ideas and they hold out the hope that with the creation of belief systems more compatible with science a way out of humanity's current troubles may indeed be found The result is an excursion through a world of exciting ideas and a book sure to absorb anyone interested in the fate of our species and how that fate might be influenced for the better Students researchers scholars and concerned citizens particularly interested in cognitive psychology science and society and futures studies will find the book intriguing
