lifeworld and the reduction of the mind to neuronal processes the human being increasingly appears to be just a product of data and algorithms That is we conceive ourselves in the image of our machines and conversely we elevate our machines and our brains to new subjects At the same time demands for an enhancement of human nature culminate in transhumanist visions of taking human evolution to a new stage Against this self reification of the human being this book defends a humanism of embodiment our corporeality vitality embodied freedom are the foundations of a self determined existence which uses these new technologies only as a means instead of letting them rule us In *Defence of the Human Being* offers an array of interventions directed against a reductionist naturalism or transhumanism in various areas of science and society As alternative it offers an embodied and enactive account of the human person we are neither pure minds nor brains but primarily embodied living beings in relation with others Fuchs applied this concept to issues such as artificial intelligence transhumanism and enhancement virtual reality neuroscience embodied freedom psychiatry and finally to the accelerating dynamics of current society which lead to an increasing disembodiment of our everyday conduct of life Cutting across neuroscience philosophy and psychiatry this important new book applies cutting edge concepts of embodiment and enactivism to the current scientific technological and cultural tendencies that will crucially influence our society's development in the 21st century

The Age of Stress Mark Jackson, 2016-11-17 We are living in a stressful world yet despite our familiarity with the notion stress remains an elusive concept In *The Age of Stress* Mark Jackson explores the history of scientific studies of stress in the modern world In particular he reveals how the science that legitimates and fuels current anxieties about stress has been shaped by a wide range of socio political and cultural as well as biological factors stress he argues is both a condition and a metaphor In order to understand the ubiquity and impact of stress in our own times or to explain how stress has commandeered such a central place in the modern imagination Jackson suggests that we need to comprehend not only the evolution of the medical science and technology that has gradually uncovered the biological pathways between stress and disease in recent decades but also the shifting social economic and cultural contexts that have invested that scientific knowledge with meaning and authority In particular he argues we need to acknowledge the manner in which enduring concerns about the effects of stress on mental and physical health are the product of broader historical

Solution to AI Robert Samuels,2025-05-07 This book interrogates the notion that artificial intelligence may represent a threat to the world because it lacks both empathy and reason and suggests that if we do not intervene to limit and control AI we are at risk of being overtaken by machines which are not aligned with human ethics and values To outline how we should counter the worst tendencies of automated intelligence we must first understand the roots of morality and reason and why we have been misunderstanding the fundamental difference between humans and computers Moreover by critiquing the rhetoric and ideology of AI proponents we can gain a clear understanding of the need to regulate our machines on a global basis through global treaties Turning to Freud s theories of empathy and reason from his Project for a Scientific Psychology this book outlines why the human mind is different from AI and why this difference is important to recognize

Constitutional Challenges in the Algorithmic Society Hans-W. Micklitz,Oreste Pollicino,Amnon Reichman,Andrea Simoncini,Giovanni Sartor,Giovanni De Gregorio,2021-12-02 New technologies have always challenged the social economic

legal and ideological status quo Constitutional law is no less impacted by such technologically driven transformations as the state must formulate a legal response to new technologies and their market applications as well as the state's own use of new technology In particular the development of data collection data mining and algorithmic analysis by public and private actors present unique challenges to public law at the doctrinal as well as the theoretical level This collection aimed at legal scholars and practitioners describes the constitutional challenges created by the algorithmic society It offers an important synthesis of the state of play in law and technology studies addressing the challenges for fundamental rights and democracy the role of policy and regulation and the responsibilities of private actors This title is also available as Open Access on Cambridge Core

Book Jacket Not So Fast Doug Hill, 2016 There's a well known story about an older fish who swims by two younger fish and asks How's the water The younger fish are puzzled What's water they ask Many of us today might ask a similar question What's technology Technology defines the world we live in yet we're so immersed in it so encompassed by it that we mostly take it for granted Seldom if ever do we stop to ask what technology is Failing to ask that question we fail to perceive all the ways it might be shaping us Usually when we hear the word technology we automatically think of digital devices and their myriad applications As revolutionary as smartphones online shopping and social networks may seem however they fit into long standing deeply entrenched patterns of technological thought as well as practice Generations of skeptics have questioned how well served we are by those patterns of thought and practice even as generations of enthusiasts have promised that the latest innovations will deliver us soon to Paradise We're not there yet but the cyber utopians of Silicon Valley keep telling us it's right around the corner What is technology and how is it shaping us In search of answers to those crucial questions Not So Fast draws on the insights of dozens of scholars and artists who have thought deeply about the meanings of machines The book explores such dynamics as technological drift technological momentum technological disequilibrium and technological autonomy to help us understand the interconnected interwoven and interdependent phenomena of our technological world In the course of that exploration Doug Hill poses penetrating questions of his own among them Do we have as much control over our machines as we think And who can we rely on to guide the technological forces that will determine the future of the planet

The Modern Invention of Information Ronald E Day, 2008-02-20 In *The Modern Invention of Information* Discourse History and Power Ronald E Day provides a historically informed critical analysis

of the concept and politics of information. Analyzing texts in Europe and the United States, his critical reading method goes beyond traditional historiographical readings of communication and information by engaging specific historical texts in terms of their attempts to construct and reshape history. After laying the groundwork and justifying his method of close reading for this study, Day examines the texts of two pre-World War II documentalists, Paul Otlet and Suzanne Briet. Through the work of Otlet and Briet, Day shows how documentation and information were associated with concepts of cultural progress. Day also discusses the social expansion of the conduit metaphor in the works of Warren Weaver and Norbert Wiener. He then shows how the work of contemporary French multimedia theorist Pierre Lévy refracts the earlier philosophical writings of Gilles Deleuze and Félix Guattari through the prism of the capitalist understanding of the virtual society. Turning back to the pre-World War II period, Day examines two critics of the information society, Martin Heidegger and Walter Benjamin. He explains Heidegger's philosophical critique of the information culture's model of language and truth as well as Benjamin's aesthetic and historical critique of mass information and communication. Day concludes by contemplating the relation of critical theory and information, particularly in regard to the information culture's transformation of history, historiography, and historicity into positive categories of assumed and represented knowledge.
